

MINI-BEAM SME312 Expert Series

Microprocessor-based TEACH mode photoelectric sensors¹

- TEACH-mode sensors in the popular MINI-BEAM package
- Easy push-button programming automatically adjusts sensitivity to optimal setting
- Multiple sensing modes include retroreflective, polarized retro, clear object detection, diffuse, divergent, and convergent, plus glass and plastic fiber optic models
- Fast, 500 microsecond (0.5 millisecond) output response
- Bipolar NPN (sinking)/PNP (sourcing) outputs
- Easy output programming eliminates the need for Light or Dark Operate selection
- Separate TEACH input allows remote programming by an external device, such as a switch or a process controller
- LED status indications for received signal strength (using Banner's AID™ function), power ON, and output state
- Green Stability indicator flashes when received signal level approaches the switching threshold, also indicates Power ON
- Integral 2 meter (6.5 foot) cable or 5-pin Euro-style quick-disconnect (QD) connector, depending on model; 9 meter (30 foot) cable models are also available

WARNING: Not To Be Used for Personnel Protection

Never use this device as a sensing device for personnel protection. Doing so could lead to serious injury or death. This device does NOT include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition.

Overview

MINI-BEAM® Expert™ is a complete family of sensors, all housed in the popular, robust and compact rectangular housing. Their large push button and easy-to-see indicators provide easy configuration, alignment, and monitoring during use.

Retroreflective and Polarized Retroreflective Mode models are excellent for sensing relatively small items where opposed-mode sensing is not possible. They are recommended for relatively clean environments where high excess gain is not required. Polarized models filter out unwanted reflections.

Polarized Retroreflective Mode – Clear Object Detection models reliably detect the presence of clear objects.
