Notes: *1. Minimum switching load is a guide to the lower current limit of switching under the micro-load. This parameter is changed by the condition, such as switching times, environment condition, and expected reliability. When the relay is used lower than minimum switching load, reliability is attrition. Please use the relay over minimum switching load.
*2. Wave is standard shock voltage of $\pm 1.2 \times 50 \mu$ s according to JEC-212-1981
*3. Allowable range when in original packaging is -40 to $+70^{\circ} \mathrm{C}-40$ to $+158^{\circ} \mathrm{F}$.
