

Description

The μPC624 is a monolithic multiplying digital-to-analog converter designed for high speed performance and design/application flexibility. Advanced circuit design allows settling time of 85 ns. The outputs are high impedance dual complementary current types, which allow simple resistive loading, op-amp voltage conversion, and other configurations. The adjustable threshold logic input allows connection to all popular logic families.

Features

- Wide range multiplying capability
- Wide power supply range ± 5 V to ± 18 V
- High output impedance and compliance
- Variable logic threshold
- Direct interface to TTL, CMOS, PMOS
- Differential current outputs
- Pin to pin compatible with PMI's DAC-08

Ordering Information

Part Number	Package	Operating Temperature Range
μPC624C	Plastic DIP	-20°C to -70°C
μPC624D	Ceramic DIP	-20°C to -80°C

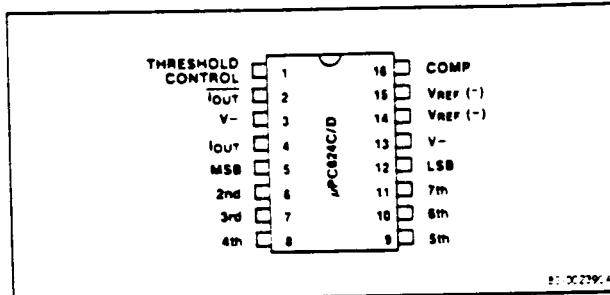

Absolute Maximum Ratings

T_A = 25°C

Supply Voltage	36 V
Logic Inputs	V ⁻ to (V ⁻ - 36 V)
Logic Threshold Control Voltage	V ⁻ to V ⁻
Analog Current Outputs	4.2 mA
Reference Inputs	V ⁻ to V ⁻
Reference Input Differential Voltage	±18 V
Reference Input Current	5.0 mA
Power Dissipation, D or C Package	500 mW
Operating Temperature Range, D Package	-20 to +80°C
Operating Temperature Range, C Package	-20 to -70°C
Storage Temperature Range, D Package	-55 to +150°C
Storage Temperature Range, C Package	-55 to +125°C

Comment: Stress above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Pin Configuration

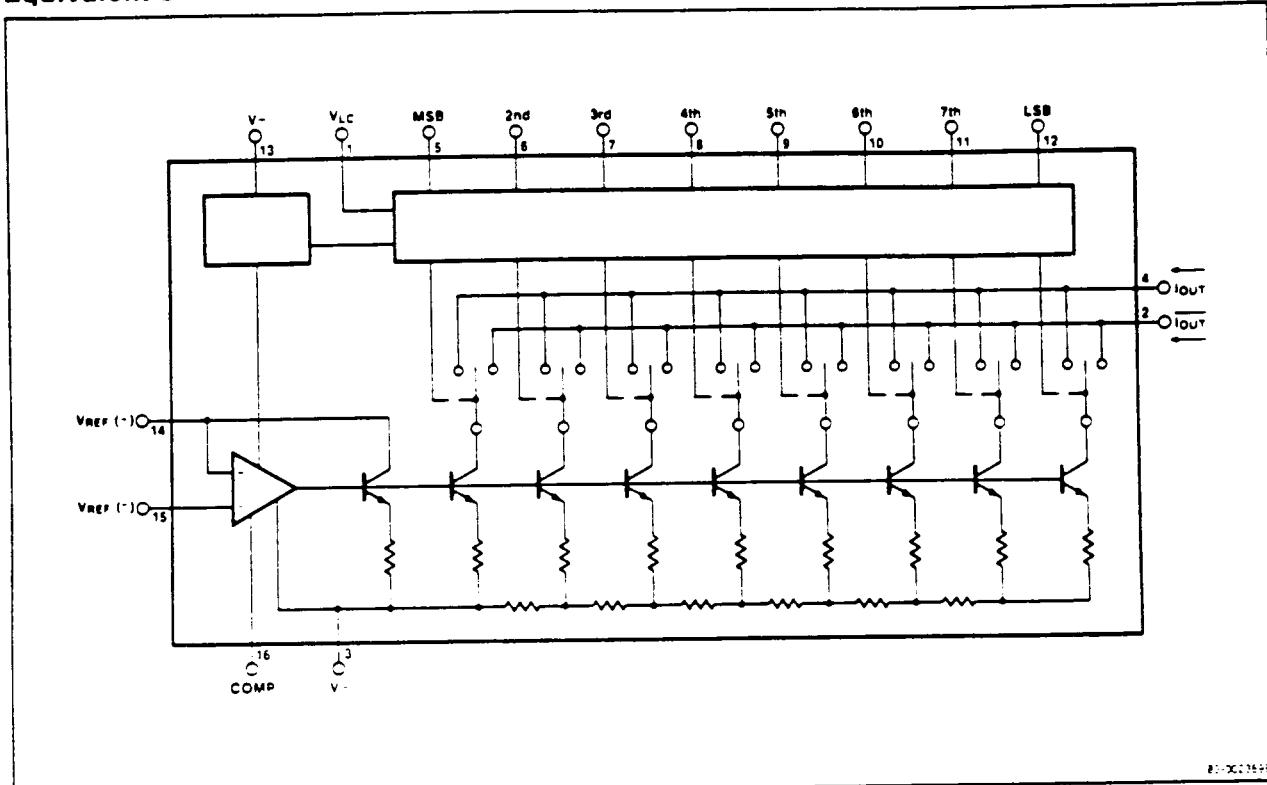

Pin Identification

Pin	Name	Function
1	Threshold Control	
2	I _{OUT}	Current Output
3	V ⁻	Power Supply Negative
4	I _{OUT}	Current Output
5	MSB	Data Bit 1
6	2nd	Data Bit 2
7	3rd	Data Bit 3
8	4th	Data Bit 4
9	5th	Data Bit 5
10	6th	Data Bit 6
11	7th	Data Bit 7
12	LSB	Data Bit 8
13	V ⁻	Power Supply Positive
14	V _{REF} +	Positive Reference Voltage
15	V _{REF} -	Negative Reference Voltage
16	Compensation	Amp Compensation

	I^-	2.3	3.8	mA	$V^{\pm} = \pm 5\text{ V}$, $I_{\text{REF}} = 1\text{ mA}$
	I^-	-4.3	-5.8	mA	$V^{\pm} = \pm 5\text{ V}$, $I_{\text{REF}} = 1\text{ mA}$

Typical Applications

Basic Positive Reference Operation

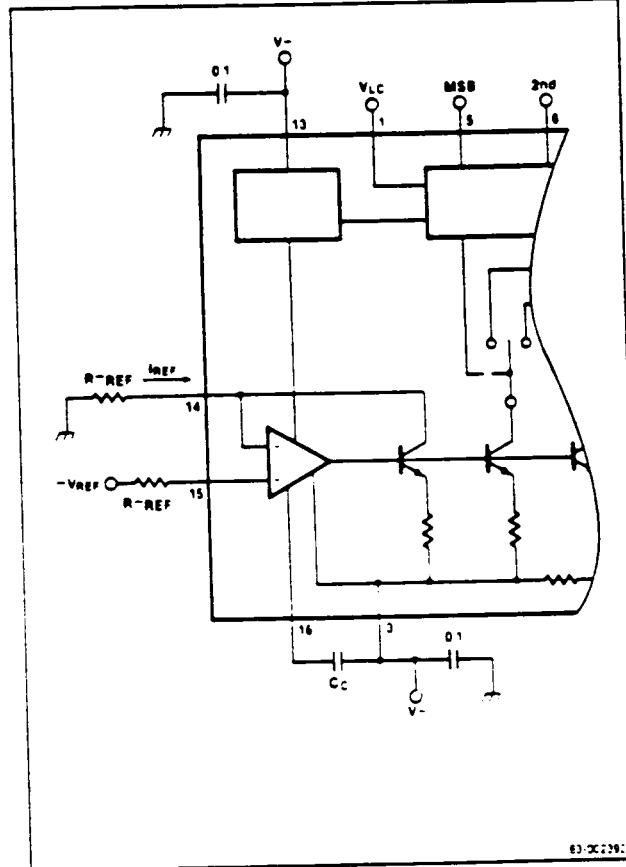

Notes:

1. $R_{TREF} = R_{REF}$
2. $C = 0.01 \mu F$ (Standard Value)
3. Minimum capacitor value for stable operation is given by

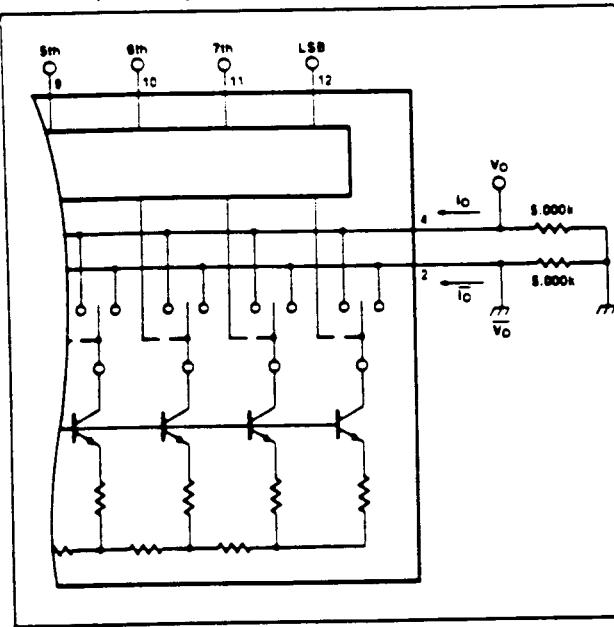

$$C_C = R_{REF} (k\Omega) \times 15 (\text{pF})$$

Basic Negative Reference Operation

63-X-2945

Basic Unipolar Negative Operation

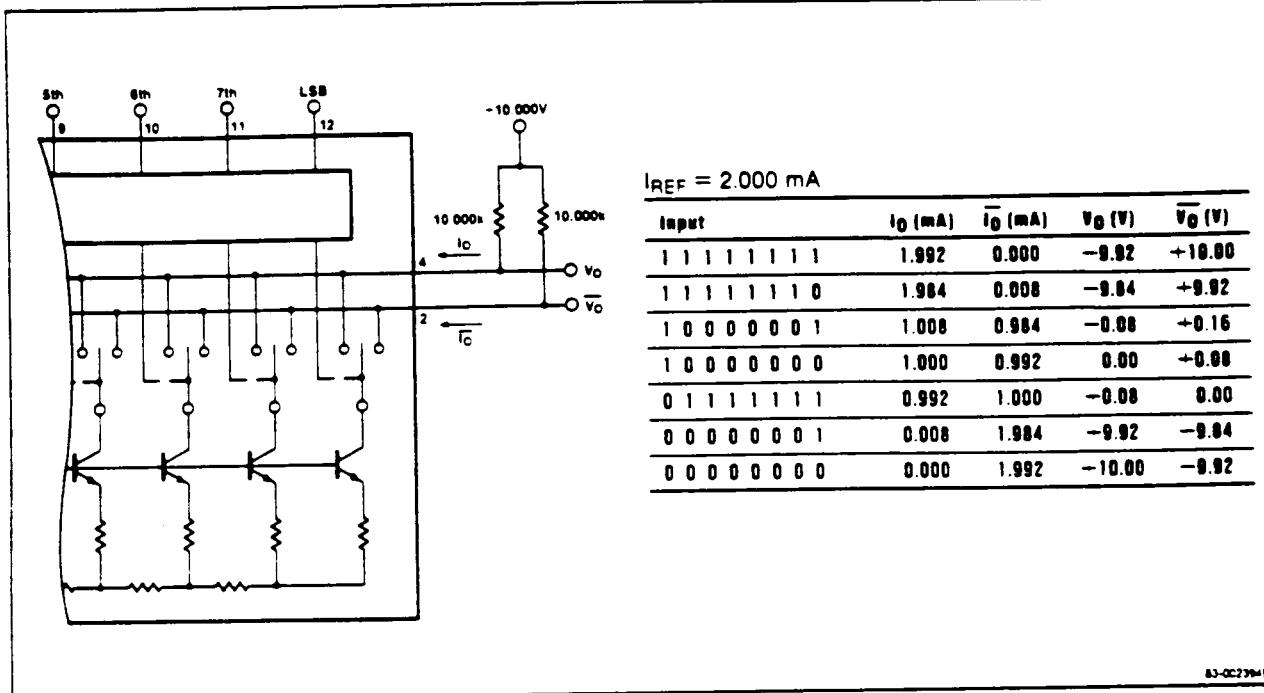

$I_{REF} = 2.000 \text{ mA}$	$I_0 \text{ (mA)}$	$\bar{I}_0 \text{ (mA)}$	$V_0 \text{ (V)}$	$\bar{V}_0 \text{ (V)}$

Typical Applications (Cont.)

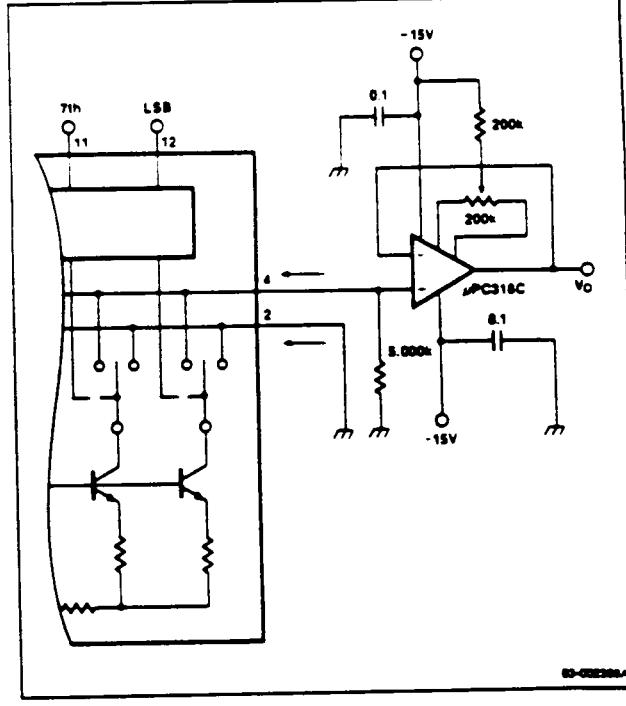

Basic Bipolar Output Operation

Positive Low Impedance Output Operation

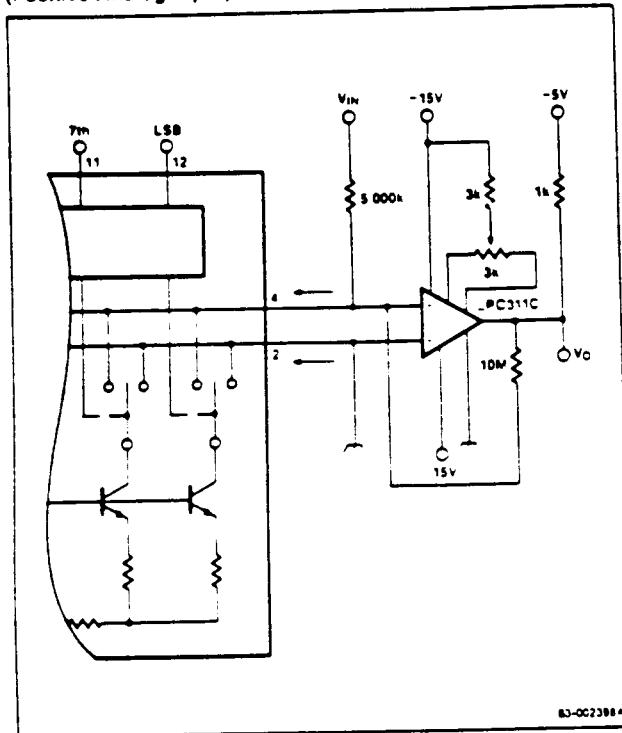

Negative Low Impedance Output Operation

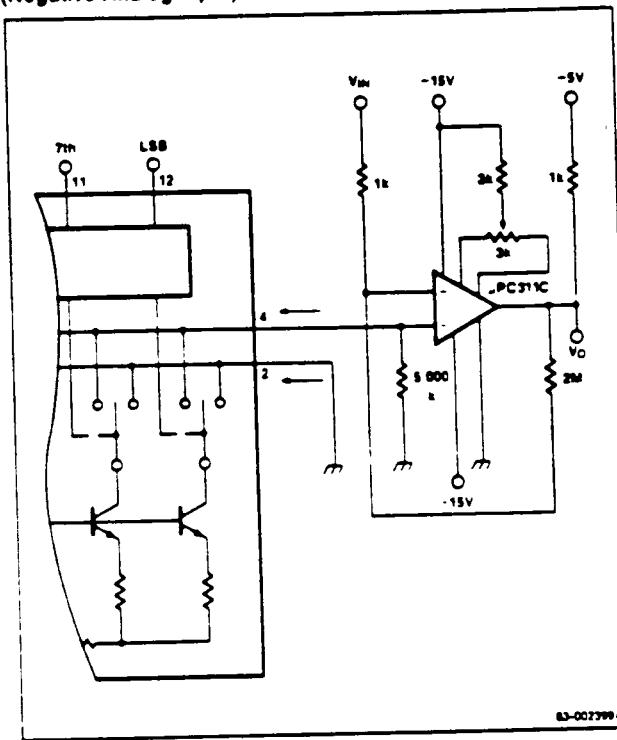

Typical Applications (Cont.)

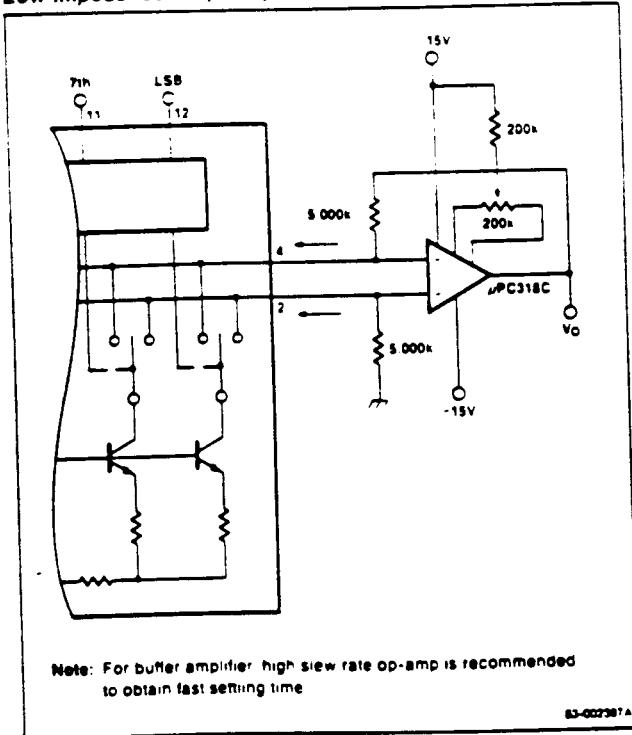

**Comparator Connection Method for A/D Conversion
(Positive Analog Input)**

**Comparator Connection Method for A/D Conversion
(Negative Analog Input)**

Low Impedance Output Operation (Both Outputs)

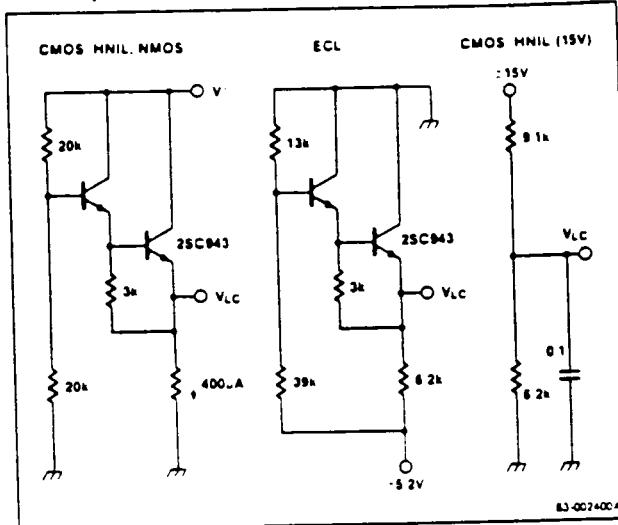

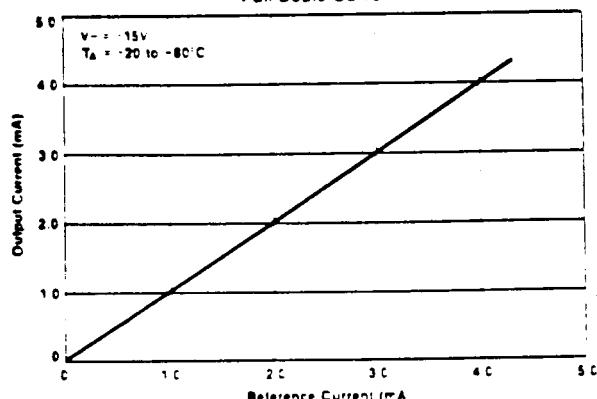

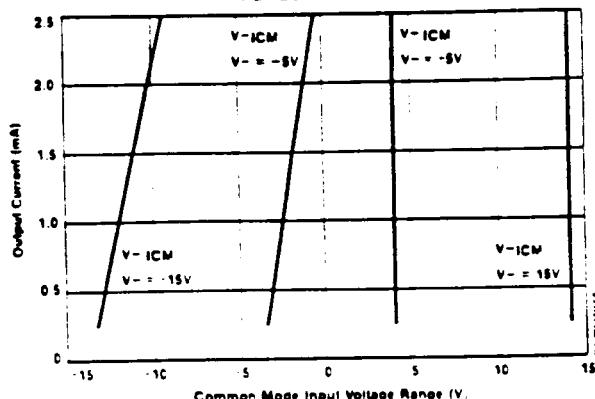

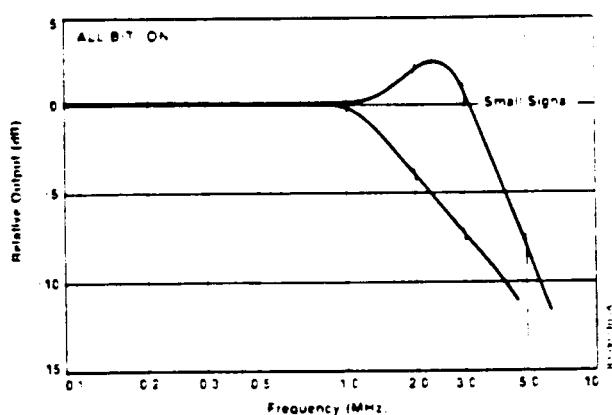

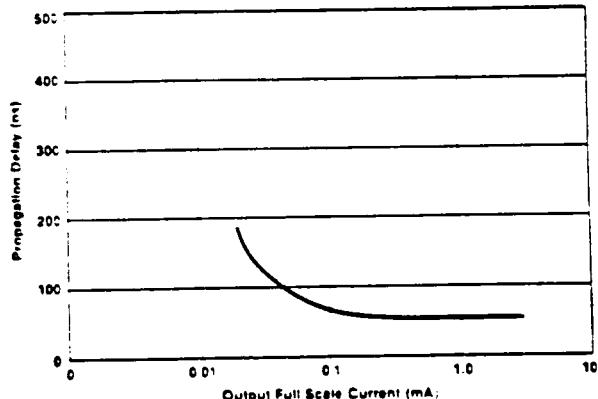

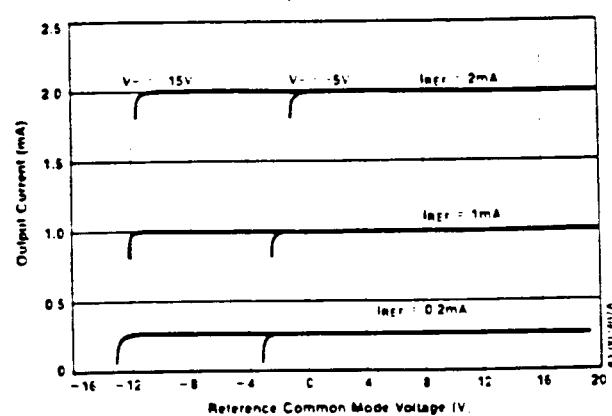

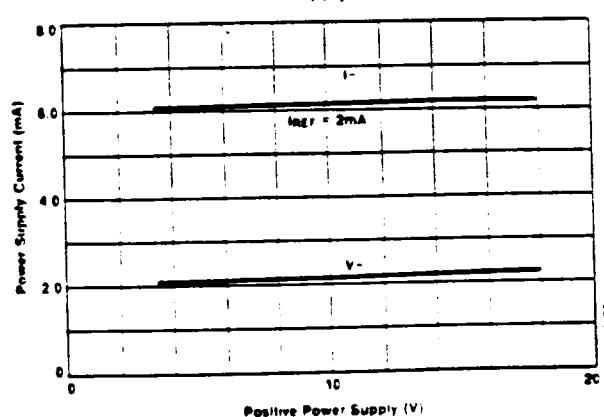

Interfacing with Various Logic Families

The logic threshold is set about 1.4 V above V_{LC} . This enables TTL level acceptance by simply grounding pin 1. By placing an appropriate voltage at the logic threshold control pin (pin 1), various threshold values are available for the other logic families.

TTL interface permission gives the interval logic threshold $-4 \text{ mV}/^\circ\text{C}$ temperature coefficient. $V_{TH} = V_{LC} + 1.4 \text{ V} - 0.004 \text{ V} \times (T_A - 25^\circ\text{C})$.
