

AMKASYN
Servo Drives KE/KW.

Compact, powerful, modular.

AMK

BENEFITS

- Safety inside
- Motion Control
- Up to 50% less cabinet volume
- Energy saving
- Cold plate / heat recovery
- Control performance

Take advantage of your space-saving potential! With the most compact servo drives.

The most compact way to show size.

Discover the added value of power density. With the intelligent servo drives KE/KW the available framesize is used effectively. The innovative cooling technology of AMK guarantees optimum heat dissipation and increases service life. The result: 50% of the volume can be saved. The flexible mounting of the modules allows ergonomic machine design.

The drive system for high-dynamic positioning duties.

The controller platform in the AMK drive system KE/KW with the newest processor design opens up new possibilities for higher performance. Realtime Ethernet (RTE) via EtherCAT or VARAN offers a powerful system communication for the automation of your machine. The utilization of only those modules that are actually required paves the way for optimum cost effectiveness. All types of synchronous or asynchronous servo, high-torque or linear motors with various encoder systems can be operated in a highly dynamic and precise manner.

Be on the safe side.

The drives offer a maximum safety standard. The safety function „STO“ is certificated in the safety category 4 under EN 954 as well as in the highest safety level PL e of the newest safety norm according to EN ISO 13849-1 and available in the inverters. Further safety functions can be realized through the use of the controller card KW-R07.

Sustainability through maximum energy efficiency.

The supply modules are line regenerative and therefore especially energy-efficient in order to save energy costs. The products of the range KES supply the energy obtained by the generator-based braking highly effective and sinusoidal back in your network. In addition, the regulated DC bus voltage provides higher speeds and power for your motors. The input currents are limited in their peaks and a power factor of nearly 1 will be realized. The system-related power loss can be used by the heat recovery of the cold plate technology for your processes.

System overview

Compact supply module

Compact supply module, optional without line regeneration, with block commutated line regeneration or sinusoidal supply and line regeneration.

Compact inverter

Inverter for high-dynamic control of servo motors. Multifunctional network-capable as single or double inverter with plug-in controller cards and as two-axes inverter with built-in controller card.

Controller cards

The controller cards are placed in the plug-in slot of the compact inverter module.

Depending on the bus system and performance there are different types.

Option cards

For individual function extension, the inverter KW provides up to two plug-in slots for option cards.

Trendsetting cooling technology

AMK inverters are a market leader in compactness and power density for many years because of the efficient heat removal. The cold plate modules are easily mounted on a liquid- or air-cooled plate.

The liquid-cooled cold plate offers in particular at high power enormous advantages. The products can be mounted very easily without interrupting the cooling circuit. The heat dissipation through the liquid-cooled plate reduces the cooling requirements of the cabinet interior considerably.

For small power, the modules with integrated air-cooling offer a cost-effective solution.

Communication

Fieldbusses:

- EtherCAT
- CANopen
- SERCOS
- Profibus DP
- VARAN

Multifunctional I/O

- Digital inputs and outputs
- Analogue input
- Measurement input
- Impulse output

Standard functions

- Torque control
- Speed control
- Position control
- Positioning function
- Homing cycle in many variations
- Synchronous control
- Electronic line shafting
- Holding brake control
- Safety functions

Functional safety

Integrated safety function "STO" in category 4 according to EN 954-1 as well as in the highest safety level PL e of the newest safety norm according to EN ISO 13849-1. Further safety functions can be realized through the controller card KW-R07.

Design

Very compact dimensions. The system can be adapted due to space savings of up to 50% optimally to each machine ergonomic. Without the need for DC bus connection bars between the modules a flexible installation in the cabinet is possible.

Effective energy management

High efficiency rating and line regenerative braking reduce energy consumption and energy costs.

B E N E F I T S

- **Functional safety**
- **Reduction of the cabinet space of up to 50%**
- **Cost saving by possible integration of the cabinet as a part of the machine**
- **Cost-optimized solutions due to modular system structure**
- **Design of complex interconnected machines utilizing AMK's realtime synchronization**
- **Optimized cooling technology for every application**

Compact supply module KE

Maximum power in minimum space.

The KE compact supply modules generate the DC bus voltage for the connected inverters and are available in the following versions:

KEN:

Not line regenerative supply module

KE:

Line regenerative supply module

KES:

Sinusoidal line regenerative supply module

The KES product range featuring sinusoidal supply and line regeneration generates a regulated DC bus voltage. The products stand out from various other systems due to their robust design. Higher drive speeds and performance can be achieved through the voltage boost in the DC link.

Features:

- Power ratings up to 120 kW
- Cooling in cold plate technology
- Line regenerative braking optional
- Protective functions
 - Overtemperature
 - Power failure
 - Input current
 - Short circuit protected
 - DC bus overcurrent
 - Main contactor control

B E N E F I T S

- High power density
- High efficiency
- Sustainability through line regeneration
- KES: Distortion of the main
- KES: Limits of harmonic currents according to EN 61000-3-12

Compact servo drive module KW

Dynamic response and precision. With safety.

The digital compact servo drive modules KW control the motors in 4-quadrant mode precisely and with high dynamic response.

A multifunctional connection to a higher-level control unit via various field busses is possible.

Features:

- Power rating up to 100 kVA
- Cooling in cold plate technology
- Integrated safety function „STO“ in PL e according to EN ISO 13849-1 and category 4 according to EN954-1.
- Accommodates 1 controller card (KW-R03, KW-R03P, KW-R04, KW-R06 or KW-R07) and up to 2 option cards. Controller and option cards must be ordered separately.

B E N E F I T S

- Integrated safety function „STO“
- New dimensions in power density
- Effective heat removal and long service life due to cold plate technology
- High efficiency
- Compact machine design

Double servo drive module KWD

Two drives in one enclosure.

The compact servo drive module KWD contains two independent KW drives in one enclosure. This represents a low-cost and extremely compact solution for servo drives with low power ratings.

Features:

- Power rating up to 2 x 5 kVA
- Very compact dimensions
- Cooling in cold plate technology
- Integrated safety function „STO“ in PL e according EN ISO 13849-1 and category 4 according EN954-1.
- Accommodates 2 controller cards (KW-R03, KW-R03P, KW-R04, KW-R06 or KW-R07). Controller cards must be ordered separately.

B E N E F I T S

- Cost-effective and very compact solution for servo drives with small power
- Integrated safety function „STO“
- High efficiency
- More compact machine design

Two-axes inverter module KWZ

Two inverters with integrated CPU card.

The two-axes inverter module contains two independent KW drives in one enclosure.

There is no additional controller card necessary because it is already integrated. This represents a low-cost and extremely compact solution for precise and dynamic control of synchronous, asynchronous and linear motors etc.

Combined with the compact supply modules, this are extremely low-cost multi-axes servo drive systems.

Features:

- 2 axes in one module in the power rating up to 2 x 5 kVA
- Servo operation of each axis with resolver
- Optional ACC bus (CANopen)-communication or EtherCAT
- Integrated safety function „STO“ in PL e according to EN ISO 13849-1 and category 4 according to EN954-1.
- Very compact dimensions.
- Cost savings in devices and wiring
- Cooling system in cold plate technology

B E N E F I T S

- No additional controller card necessary
- Cost-effective solution for drive systems, solutions and applications
- Integrated safety function „STO“
- High efficiency

KE-F/KW-F with integrated air-cooling

The series KE-F/KW-F are equipped with an integrated air-cooling system.

The only difference between the module of this type and the modules in cold plate technology is the air-cooling element on the back of the module.

For appliances with low power, this series are a cost-effective solution.

The inverters of the F series have also the integrated safety function "STO" in PL e according to EN ISO 13849-1 as well as category 4 according to EN954-1.

Controller cards

Functionality made to measure

Realtime Ethernet

KW-R06

With the controller card KW-R06, AMK has created a new platform for outstanding controller performance in the AMK drive system: With EtherCAT/VARAN as realtime Ethernet interface, a fast system bus is available which is predestined for high dynamic positioning tasks. So more than 100 drives with setpoints can be used synchronously. Integrated filters avoid disturbances by noise or cyclic influence. If no absolute encoders are used, the commutation can be effected by software using a micro movement. Furthermore, the controller card has an option slot with which the system can be expanded through digital I/O's.

Functional safety

KW-R07

The KW-R07 is similar to the KW-R06. Additionally safe drive solutions up to PL e according to EN ISO 13849-1 can be realized. The control of the safety functions is carried out by safe I/O's or via FSoE by a safety PLC.

Safe stop functions

- STO - Safe Torque Off
- SOS - Safe Operating Stop
- SS1 - Safe Stop 1
- SS2 - Safe Stop 2

Safe movement functions

- SLS - Safely Limited Speed
- SDI - Safe Direction
- SSR - Safe Speed Range

ACC Bus

KW-R03, KW-R03P, KW-R04

The KW-R03 is a controller card with full functionality. For connection to a control and to additional participants, the CANopen (ACC bus) interface is available. Up to 32 drives with setpoints can be used synchronously. The controller card offers two option slots for expanded functionality.

The KW-R03P adds PLC functionality.

The KW-R04 is similar to the KW-R03 without the encoder connection X131.

Description

The controller cards are inserted into the card plug-in slot of the compact servo drive module KW. The entire control of the drives including all monitoring and communication is realized via the digital signal processor on the card.

The controller cards KW-R03 and KW-R03P offer 2 additional card connectors, the controller card KW-R06 offers one additional card connector for option cards. The option cards are connected using a bus connector in the appropriate position on the controller card.

Functions

- Control motor brake
- Electronic gear
- Probe function
(actual position encoder/square wave pulse)
- Number of probe inputs according SERCOS
- Homing cycle
- Spindle positioning
- Change of operating mode
- Transfer of the parameter set
- Digital/analogue speed control
- Absolute/relative positioning

Option cards

Individual function enhancement.

A range of option cards are for individual function enhancement, which can be inserted into the inverter's controller card.

Functions:

- Fieldbusses
- PLC for Motion Control and machine control
- Encoder interfaces
- I/O extension

Controller component			
KW-R03	●	●	●
KW-R03P	●	●	●
KW-R04	-	-	-
KW-R06	●	-	-

I/O Extension KW-EA2

This option card paves the way for a low-cost enhancement of the KE/KW system with digital inputs and outputs, which can also be used to control motion profiles.

Features:

- 12 digital 24V inputs in compliance with VDI 2880
- 8 optically isolated 24V outputs each rated at 100mA
- Short-circuit monitoring of the outputs
- Bit information within the drives configurable for outputs
- Triggering of various drive functions configurable through inputs
- With "Configurable Control PLC", the I/O can be used as PLC inputs and outputs.

Encoder interface KW-EN1

This option card enables connection of a second sinusoidal encoder measuring system. This means that both a high-resolution, linear scale for position feedback and a sinusoidal encoder system for speed control and commutation can be connected to one KW.

Features:

- Absolute encoder with actual position encoder in the form of Endat[®]2.1
- Ext. 24 V incoming encoder supply
- Probe input through 1 digital input 24V

Encoder interface KW-SSI

The option card KW-SSI provides the actual position value through a SSI interface for a higher-level controller.

Features:

- Actual position value is cyclically updated depending on the SERCOS cycle time
- Minimal updating rate = 500µs
- Actual position value can be sampled by higher-level controller in a cycle of >=1ms
- KW-SSI works as cycle slave
- Independent of plug-in slot
- Automatic recognition

•	•	•	•
•	•	•	•
-	-	-	-
-	-	-	-

Fieldbus KW-EC1

The option card KW-EC1 facilitates communication between a higher-level controller (EtherCAT master) and the KW module (EtherCAT slave) using the SoE (servo drive over EtherCAT) profile.

Features:

- EtherCAT protocol with servo drive profil (SoE)
- Synchronous data and parameters according to SERCOS (IDs)
- Min. cycle times (500 µs)
- Optional setting of addresses via rotary coding switches

Fieldbus KW-SC1

The interface card KW-SC1 transforms the drive into a SERCOS interface® slave. This slave is based on the SERCOS interface® slave Version V 1.02. in compliance with DIN EN/IEC 61491.

Features:

- SERCOS class C
- Communication cycle time minimal 0.5 ms
- Transfer rate up to 16Mbit/s
- Broadcast Message to all drives available

Fieldbus KW-PB1

The interface card KW-PB1 PROFIBUS-DP allows communication between a PROFIBUS Master and the drive via **AMK fieldbus protocol AFP** for drive commanding.

Features:

- Connection of the inverter to a PROFIBUS-DP MASTER in compliance with DIN 19245, part 3
- Maximum 32 slaves per line (can be enhanced to max. 122 slaves with repeater)
- Baud rate 12 Mbit/s
- Address assignment via rotary encoding switch
- Max. 48 input and 48 output bytes
- AFP driver component for Siemens S7 SPS available

PLC for machine control KW-PLC2

PLC according IEC 61131-3. For all complex machine control functions including visualization as well as the execution of axis-specific tasks. In addition, the option card offers a hardware synchronous CANopen interface.

Features:

- CANopen in accordance with DS301 version 4.01.
- Additionally CAN BUS MASTER or SLAVE
- Hardware synchronized signal scanning, jitter < 1µs
- Comprehensive AMK Motion Control
- 2 fast probe inputs with a resolution of up to 200 ns
- RS422 MODBUS interface for data exchange between PLC and an external operator panel/visual display unit
- 584 kByte program memory
- 128 kByte data memory

Remote maintenance

Engineering and application with **AIPEXPRO**

AIPEXPRO integrates all engineering tools needed during the life cycle of a machine, such as programming, parameterization, commissioning, optimization and diagnostics. This saves you time-consuming efforts to coordinate, for example, between your PLC program containing drive parameters and the configuration of user data exchange via the field bus. AIPEXPRO does this work for you automatically and frees you from all tasks not directly tied to your application.

Configuration

With the configuration, the components of the drive system can be assembled from a data base (motor, converter, controller component, option cards, controls, I/O components).

- Automatic fieldbus configuration
- Parameterization
- Commissioning

Programming

AIPEXPRO integrates the worldwide approved programming platform CoDeSys. All programming languages according to IEC 61131-3 are supported and can even be combined within one project. For programming (in favored language) preprogrammed function blocks in countless libraries are available.

In the development environment, the visualization and the basic library are contained as a foundation for the automation solution. In the basic library, extensive basic modules as e.g. mathematic functions and logic modules (timer, counter) are included.

Visualization

The machine visualization can be compiled with the graphic function of the integrated visualization editor, also by pre-assembled visualization modules. The User will be able to access the web visualization in the AMK drives worldwide.

Libraries

This tool allows use of extensive preprogrammed motion control and technology functions.

Motion control libraries

The basic functions of your machine control are contained in these modules, such as electronic cam control and cam function.

Technology function

You can further simplify your engineering by using the technology functions, for instance form, fill, seal and print mark control, winder and cross cutter functions.

Remote maintenance and diagnostic

You have access to the machine control and the drives from any location.

With the update tool in AIPEXPRO you can quickly and easily update the firmware.

B E N E F I T S

- All programming languages according to IEC 61131-3
- Economical generation of your machine software
- Reduction of the time-to-market of your machine
- Realize innovative machine concepts per drag & drop
- Comprehensive preprogrammed AMK technology functions
- Integrated web visualization accessible worldwide

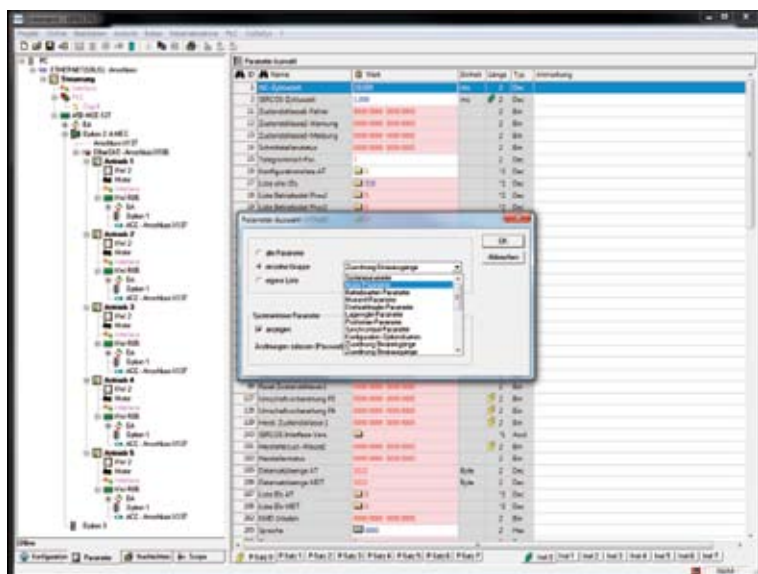

Automatic fieldbus configuration.

The revolutionary coupling of component configuration and programming environment has made fieldbus configuration very easy. AIPEXPRO recognizes all data that has to be transferred and automatically generates the configuration of the fieldbus. Data are prepared, depending on their use in the PLC program, either synchronously or asynchronously. Fully automatically and reliably.

The programmer is thus freed from tedious work and can fully concentrate on the important aspects of the machine control.

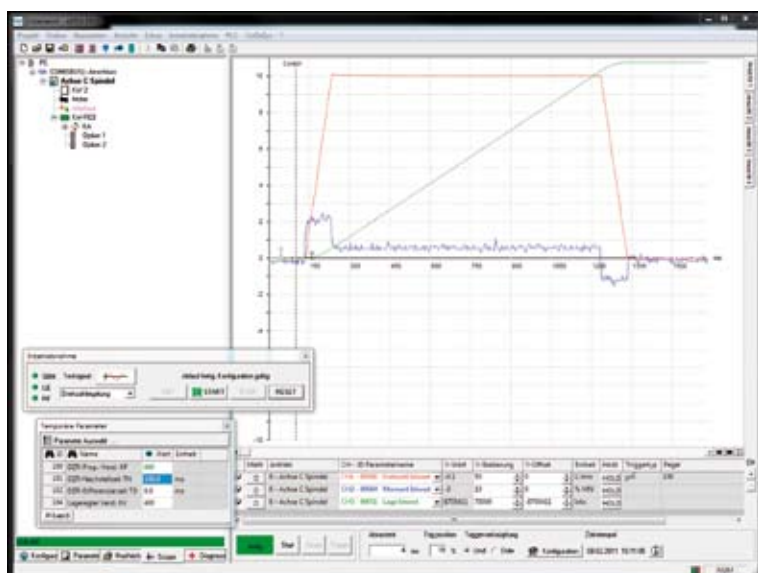

Drive data as well as I/O data are configured fully automatically.

Simple parameterization of the drives.

The drive system consists of the servo inverters and motors which together have to optimally fulfill the tasks. Wizards aid in the parameterization for standard configurations of the drive. Using the parameter explorer you have access to all parameters in the system. Adjustments and optimizations can also be made during operation. The temporary changes are directly adopted.

AIPEXPRO has access to all devices on the fieldbus network. From one central location all parameters and configuration data can be read as well as written. Troubleshooting is made easier by the central access with AIPEXPRO. As soon as a message is generated, you receive it in plain text with additional information displayed.

Start-up.

- Internal setpoint generator with sine-wave, triangle, trap-zoid and step generators for torque, speed and position setpoints
- Temporary parameter access for the online tuning of all control parameters
- Integrated oscilloscope
 - Measurement of all internal data such as position values, speed values, currents, torques, digital I/O voltages etc.
 - Up to 8 variables can be recorded per device
 - Diverse trigger (flank, event, level)
 - Cursor measuring function (time, absolute value, difference)
 - Hold function for measured data
 - 4 different views possible for each device
 - Saving and exporting of measured values

Device type

Designation	Product information	AMK part No.
KE Power supply module without regeneration		
KEN 5	5 kW	E793
KEN 10	10 kW	E816
KEN 120	120 kW	E781

Business solutions.

Economical, modular and high-performance.

Innovative drive and control solutions from AMK offer exactly the right product for many machines and systems:

- Printing
- Paper processing
- Machine tool manufacture
- Textiles
- Plastics
- Packaging
- Food industry

Our application engineers have a wide range of theoretical and practical knowledge and are happy to create a customized solution for every branch of industry.

Printing.

High level of precision and dynamics. 1,000 axes, 18 meters per second.

Paper unwinder.

In-process change at full production speed.

Paper processing.

At speeds of 10 m/s printing marks in the size of 2x2 mm are recognized with an accuracy of +/- 30 µm.

Plastics.

Cycle times of 1.6 seconds. Highest demands on precision and repeatability.

Food industry.

Flexible use of labelling machines for a wide-range of bottle formats.

Packaging.

Form, fill and seal machines, envelope and blister packaging, foil wrapping machines or palletizers.

B E N E F I T S

- Complete drive and control system from one source
- Extensive industry expertise for innovative machine concepts
- AMK technology library with motion control function modules also for your application

Service, training and consulting.

Our expertise specially for you!

Service

AMK is committed to offering an extensive range of services. When help is needed, our specialists from "Technical Support" provide valuable assistance in the planning, design, installation, commissioning and programming phases.

Consulting

We provide individual and project-related consulting services to support you in the operation of your particular drives and controllers. You receive precisely the information you need based on your specific requirements.

Training

Our extensive training programme provides theoretical and practical know-how and offers various training options either at our training center or at your company.

The programme extends from basic training to expert workshops. If required, we can also provide individual, project-orientated training.

General technical data

Directives and standards

- Low voltage directive 73/23/EWG and 93/68/EWG
- EN 50178 "Electronic equipment for use in power installations"
- EN 61800-2 "Adjustable speed electrical power drive systems, General requirements"
- EN 61800-3 "Adjustable speed electrical power drive system, EMC product standard"
- UL 508C "Power Conversion Equipment".
- CSA C22.2 "Industrial Control Equipment"

Machine standards:

- Machine Directive 89/392/EWG
- EMV Directive 89/336/EWG
- EN 60204 "Electrical equipment of machines"

Input Power:

3 x 400 V...480 V \pm 10%, 47... 63 Hz
General operating requirements in compliance with EN 61800-2 chap. 4.1.1 and EN 60204-1 chap. 4.3

- Symmetrical three-phase input voltage, max. permitted voltage asymmetry 3% TN and TT network, grounded neutral
- Suitable for IT networks

Reference potential:

PE, circuit GND of low voltage circuit is connected internally with the frame ground.

Power supply unit for supply voltage

24 VDC \pm 15%, ripple max. 5% with integrated starting current limitation.

Limit values for radio interference voltage in compliance with EN 61800-3: (2000) in accordance with Section 6.3.2 Tab. 11 and Tab.12 (external filter required from KE 60 upwards).

Ambient conditions

Protection type in compliance with EN 60529:

IP 20, contamination level 2

Storage/transport temperature:

-25°C to +75°C

Ambient temperature:

+5°C to +40°C

Cold plate temperature (liquid cooling):

Max. 40°C

Relative humidity:

5% to 85%, without condensation

Setup height:

Up to 1000 m above sea level. In the case of altitudes over 1,000 m up to max. 2,000 m the ratings must be reduced by 1% per 100 m.

Shock resistance:

15 g for 11 ms in compliance with EN 60068-2-27

Vibration stress:

1 g at 10...150 Hz in compliance with EN 60068-2-6

Control your Motion.
