

Specifications

Required Fiber Optic Cable

PI or PB Series plastic fibers

Sensing Beam

Visible red, 680 nm

Supply Voltage and Current

10 V dc to 30 V dc at 25 mA (exclusive of load current)

Supply Protection Circuitry

Protected against reverse polarity and transient voltages

Output Configuration

Complementary: one normally open (N.O.) and the other normally closed (N.C.); N.C. output may be wired as diagnostic alarm output by reversing power supply connections* (see Wiring Diagrams); Outputs are NPN (Sinking) or PNP (Sourcing), depending on model

Diagnostic alarm output energizes whenever excess gain falls to between 1× and 1.5× in the light condition; this output corresponds to flashing amber indicator LED

Output Rating

150 mA maximum (each output); the total load may not exceed 150 mA

Off-state leakage current: < 5 microamps at 30 V dc

On-state saturation voltage: < 1 V at 10 mA dc; < 1.5 V at 150 mA dc

Output Protection Circuitry

Protected against false pulse on power-up (false pulse protection circuit causes a 0.1 second delay on power-up); short-circuit protected

Output Response Time

500 microseconds "on" and "off"

Repeatability

160 microseconds; response time and repeatability are independent of signal strength

Adjustments

The sensitivity control is located on top of the module; it is a 15-turn slotted brass screw, clutched at both ends of travel

Indicators

Two LEDs: Green and Amber

Green steady = power to sensor is "on"

Green flashing = output is overloaded

Amber steady = normally open output is conducting

Amber flashing = marginal excess gain (1× to 1.5×) in light condition = alarm output "on"

Construction

Black ABS flame retardant housing with acrylic cover; Stainless steel M3 × 0.5 hardware for use with ABS mounting bracket (supplied)

Environmental Rating

IEC IP54; NEMA 2

Connections

2 m (6-1/2 ft) or 9 m (30 ft) attached cable, or 4-pin pico-style quick disconnect fitting; Cables for QD models are purchased separately

Operating Conditions

-20 °C to +55 °C (-4 °F to +131°F)

90% at +50 °C maximum relative humidity (non-condensing)

Required Overcurrent Protection

WARNING: Electrical connections must be made by qualified personnel in accordance with local and national electrical codes and regulations.

Overcurrent protection is required to be provided by end product application per the supplied table.

Overcurrent protection may be provided with external fusing or via Current Limiting, Class 2 Power Supply.

Supply wiring leads < 24 AWG shall not be spliced.

For additional product support, go to www.bannerengineering.com.

Supply Wiring (AWG)	Required Overcurrent Protection (Amps)
20	5.0
22	3.0
24	2.0
26	1.0
28	0.8
30	0.5
