

The highest performance...

The ZX1 and ZX2 series of displacement sensors give you best-in-class speed, accuracy and ease-of-use. For example, it has a response time as low as 60 μ s and a measuring cycle as low as 30 μ s. Perhaps the best thing about the new ZX1 and ZX2 series is its highly stable measurement of any color or surface condition – including metals, plastics and shiny materials. The result? Superior quality assurance and optimized productivity for your machines.

Benefits

- Wide range of sensing distances
- Stable measurement for objects with any surface
- Best-in-class performance for accuracy and speed
- World's smallest sensing head - for easy mounting
- Simple configuration via one-button 'Smart Tuning'
- Reliable measurement in harsh environments
- Integrated display
