## Safety Guidelines

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring to property damage only have no safety alert symbol. These notices shown below are graded according to the degree of danger.

---

### Danger

indicates that death or severe personal injury **will** result if proper precautions are not taken.

---

---

### Warning

indicates that death or severe personal injury **may** result if proper precautions are not taken.

---

---

### Caution

with a safety alert symbol, indicates that minor personal injury can result if proper precautions are not taken.

---

---

### Caution

without a safety alert symbol, indicates that property damage can result if proper precautions are not taken.

---

---

### Notice

indicates that an unintended result or situation can occur if the corresponding information is not taken into account.

---

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

## Qualified Personnel

The device/system may only be set up and used in conjunction with this documentation. Commissioning and operation of a device/system may only be performed by **qualified personnel**. Within the context of the safety notes in this documentation qualified persons are defined as persons who are authorized to commission, ground and label devices, systems and circuits in accordance with established safety practices and standards.

## Prescribed Usage

Note the following:

---

### Warning

This device may only be used for the applications described in the catalog or the technical description and only in connection with devices or components from other manufacturers which have been approved or recommended by Siemens. Correct, reliable operation of the product requires proper transport, storage, positioning and assembly as well as careful operation and maintenance.

---

## Trademarks

All names identified by ® are registered trademarks of the Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

### Copyright Siemens AG 2004. All rights reserved.

The distribution and duplication of this document or the utilization and transmission of its contents are not permitted without express written permission. Offenders will be liable for damages. All rights, including rights created by patent grant or registration of a utility model or design, are reserved.

### Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

## Designation of the documentation

### Printing history

Brief details of this edition and previous editions are listed below.

The status of each edition is shown by the code in the "Remarks" column.

*Status code in the "Remarks" column:*

- A** New documentation
- B** Unrevised reprint with new Order No.
- C** Revised edition with new status

If factual changes have been made on the page since the last edition, this is indicated by a new edition coding in the header on that page.

<b>Edition</b>	<b>Order No. for 1FT6</b>	<b>Remarks</b>
12.04	6SN1197-0AD12-0BP0	<b>A</b>

### Trademarks

SINAMICS®, SIMOTION®, SIMATIC®, SIMATIC HMI®, SIMATIC NET®, SIROTEC®, SINUMERIK®, SIMODRIVE®, SIMOVERT MASTERDRIVES® and MOTION-CONNECT® are registered trademarks of Siemens AG. Other names in this publication might be trademarks whose use by a third party for his own purposes may violate the rights of the registered holder.

# Foreword

## Information on the documentation

This document is part of the Technical Customer Documentation which has been developed for the SINAMICS S120 system. All of the documents are available individually. The documentation list, which includes all Advertising Brochures, Catalogs, Overviews, Short Descriptions, Operating Instructions and Technical Descriptions with Order No., ordering address and price can be obtained from your local Siemens office.

This document does not purport to cover all details or variations in equipment, nor to provide for every possible contingency to be met in connection with installation, operation or maintenance.

We would also like to point-out that the contents of this document are neither part of nor modify any prior or existing agreement, commitment or contractual relationship. The sales contract contains the entire obligations of Siemens. The warranty contained in the contract between the parties is the sole warranty of Siemens. Any statements contained herein neither create new warranties nor modify the existing warranty.

## Structure of the documentation for 1FK and 1FT motors

Table 1 Configuration Manual, individual sections

Title	Order No. (MLFB)	Language
Synchronous Motors, General Section for SIMODRIVE, SIMOVERT MASTERDRIVES and SINAMICS S120	6SN1197-0AD07-0AP□	German
Synchronous Motors, 1FK7 Motor Section for SINAMICS S120	6SN1197-0AD16-0AP□	German
Synchronous Motors, 1FT6 Motor Section for SINAMICS S120	6SN1197-0AD12-0AP□	German

## Danger and warning information

---

### Danger

Start-up/commissioning is absolutely prohibited until it has been completely ensured that the machine, in which the components described here are to be installed, is in full compliance with the specifications of Directive 98/37/EC.

SINAMICS devices and synchronous motors may only be commissioned by suitably qualified personnel.

This personnel must carefully observe the technical customer documentation associated with this product and be knowledgeable about and carefully observe the danger and warning information.

Operational electrical equipment and motors have parts and components which are at hazardous voltage levels.

When the machine or system is operated, hazardous axis movements can occur.

All of the work carried-out on the electrical machine or system must be carried-out with it in a no-voltage condition.

SINAMICS drive units are designed for operation on low-ohmic, grounded line supply systems (TN line supply systems).

---

---

### Warning

The successful and safe operation of this equipment and motors is dependent on professional transport, storage, installation and mounting as well as careful operator control, service and maintenance.

For special versions of the drive units and motors, information and data in the catalogs and quotations additionally apply.

In addition to the danger and warning information/instructions in the technical customer documentation supplied, the applicable domestic, local and plant-specific regulations and requirements must be carefully taken into account.

---

---

**Caution**

The motors can have surface temperatures of over +100° C.

This is the reason that temperature-sensitive components, e.g. cables or electronic components may neither be in contact nor be attached to the motor.

When connecting-up cables, please observe that they

- are not damaged
  - are not subject to tensile stress
  - cannot be touched by rotating components.
- 

---

**Caution**

The DRIVE-CLiQ interface contains motor and encoder-specific data as well as an electronic rating plate. This is the reason that this Sensor Module may only be operated on the original motor - and may not be mounted onto other motors or replaced by a sensor module from other motors.

The DRIVE-CLiQ interface has direct contact to components that can be damaged/destroyed by electrostatic discharge (ESDS). Neither hands nor tools that could be electrostatically charged may come into contact with the connections.

---

---

**Caution**

SINAMICS drive units with synchronous motors are subject, as part of the routine test, to a voltage test in accordance with EN 50178. While the electrical equipment of industrial machines is being subject to a voltage test in accordance with EN60204-1, Section 19.4, all SINAMICS drive unit connections must be disconnected/withdrawn in order to avoid damaging the SINAMICS drive units.

Motors should be connected-up according to the circuit diagram provided. It is not permissible to directly connect the motors to the three-phase line supply. Motors will be destroyed if they are connected directly to the three-phase line supply.

---

---

**Note**

SINAMICS units with synchronous motors fulfill, when operational and in dry operating rooms, the Low-Voltage Directive 73/23/EEC.

SINAMICS units with synchronous motors fulfill, in the configuration specified in the associated EC Declaration of Conformity, the EMC Directive 89/336/EEC.

---

## ESDS instructions

### Caution

An electrostatic-sensitive device (ESDS) is an individual component, integrated circuit, or module that can be damaged by electrostatic fields or discharges.

ESDS regulations for handling boards and equipment:

When handling components that can be destroyed by electrostatic discharge, it must be ensured that personnel, the workstation and packaging are well grounded!

Personnel in ESD zones with conductive floors may only touch electronic components if they are

- grounded through an ESDS bracelet and
- wearing ESDS shoes or ESDS shoe grounding strips.

Electronic boards may only be touched when absolutely necessary.

Electronic boards may not be brought into contact with plastics and articles of clothing manufactured from man-made fibers.

Electronic boards may only be placed on conductive surfaces (table with ESDS surface, conductive ESDS foam rubber, ESDS packing bag, ESDS transport containers).

Electronic boards may not be brought close to data terminals, monitors or television sets. Minimum clearance to screens > 10 cm).

Measurements may only be carried-out on electronic boards and modules if

- the measuring instrument is grounded (e.g. via a protective conductor) or
- before making measurements with a potential-free measuring device, the measuring head is briefly discharged (e.g. by touching an unpainted blank piece of metal on the control cabinet).

## Standards, regulations

The appropriate standards, regulations are directly assigned to the functional requirements.

# Motor Description

## 1.1 Features

### Overview

1FT6 motors are compact permanent-magnet synchronous motors. 1FT6 motors with integrated encoders can be operated with the SINAMICS S120 drive system.

The fully digital control system of the SINAMICS S120 drive system and the encoder technology of the 1FT6 motors fulfill the highest demands in terms of dynamic performance, speed setting range, and rotational and positioning accuracy.

The motors are primarily designed for operation without external cooling, and the heat is dissipated through the motor surface. The heat that is predominantly generated in the stator winding and in the stator core can be directly dissipated via the good thermal coupling to the motor enclosure. The concept of brushless, permanent-field synchronous motors shows its special merits here.

Figure 1-1 1FT6 motors

## Motor Description

---

### 1.1 Features

#### Benefits

- Optimum surface quality of the workpiece due to high rotational accuracy (sinusoidal current injection)
- Short non-productive idle times due to high dynamic performance
- Power and signal connections for use in very dirty environments
- Simple installation due to reduced cabling requirements
- Can absorb high cantilever forces

#### Application

- High-performance machine tools
- Machines with high requirements in terms of dynamic performance and precision

#### Standards, regulations

The appropriate standards, regulations are directly assigned to the functional requirements.

## 1.2 Technical features

Table 1-1 Features of the standard design

Technical features	Version
Motor type	Permanent-magnet synchronous motor
Type of construction (acc. to EN60034-7; IEC 60034-7)	IM B5 (IM V1, IM V3) for SH 28 to 132 IM B35 (IM V15, IM V36) for 132 to 160 (options, refer to the table)
Degree of protection <sup>4)</sup> (acc. to EN60034-5; IEC 60034-5)	IP64; core types IP65 (options, refer to the table)
Cooling (acc. to EN60034-6; IEC 60034-6)	Non-ventilated <sup>2)</sup> Force-ventilated <sup>2)3)</sup> Water-cooled
Thermal motor protection (acc. to EN 60034-11; IEC 60034-11)	KTY84 temperature sensor in the stator winding
Shaft end (acc. to DIN 748-3; IEC 60072-1)	Cylindrical; without keyway and without fitted key tolerance field k6 (option, refer to the table)
Radial eccentricity, concentricity and axial eccentricity (acc. to DIN 42955; IEC 60072-1)	Tolerance N (normal) options, refer to the Table
Vibration severity (acc. to EN 60034-14; IEC 60034-14)	Grade N (normal) (options, refer to the table)
Max. sound pressure level (acc. to DIN EN ISO 1680) + 3 dB	SH 28 to 48: approx. 55 dB(A) SH 63 to 100: approx. 70 dB(A) SH 132 to 160 (non-ventilated or water-cooled): approx. 70 dB(A) SH 132 to 160 (force-ventilated): approx. 74 dB(A) The specified values apply to all shaft heights up to speed $n_N$ .
Bearings	Roller bearings with permanent grease lubrication (lubrication over the bearing lifetime) bearing lifetime 20000 h SH 36, 48: Locating bearings on the NDE SH 28, 63 to 160: Locating bearing on the DE
Winding insulation (acc. to EN 60034-1; IEC 60034-1)	Temperature class F for a winding temperature rise of $\Delta T = 100 \text{ K}$ at an ambient temperature of $40 \text{ }^\circ\text{C}$ .
Installation altitude (acc. to EN and IEC 60034-1)	$\leq 1000 \text{ m}$ above sea level, otherwise power-de-rating factor <sup>2)</sup> 2000 m factor 0.94 2500 m factor 0.9
Magnetic material	Magnetic material
Electrical connection	The power is connected either through a terminal box or connector Encoder signals through connectors
Speed encoder, integrated	Optical encoders: <ul style="list-style-type: none"> <li>• Incremental encoders sin/cos 1Vpp (I-2048)</li> <li>• Absolute value encoder EnDat (A-2048 and A-512) <sup>1)</sup></li> <li>• Resolver, two-pole/multi-pole</li> </ul> For more detailed information, refer to the Chapter Encoders.
Rating plate	A second rating plate is provided for all motors

Footnotes, refer to the next page

## 1.3 Technical features, options, supplements

Table 1-2 Options and supplements

Technical feature	Version
Type of construction (acc. to EN60034-7; IEC 60034-7)	IM B14 for SH 63 to 100
Degree of protection <sup>4)</sup> (acc. to EN 60034-5; IEC 60034-5)	IP65, IP67, IP68 Information: SH 28 is only available in degree of protection IP64 or IP67. IP67 and IP68 with sealing air connection. Force-ventilated motors, only available in degree of protection IP64 and IP65 (fan IP54).
Shaft end (acc. to EN and IEC 60034-14)	Cylindrical; with keyway and fitted key; Tolerance field k6 H=half key balancing
Radial eccentricity, concentricity and axial eccentricity (acc. to DIN 42955; IEC 60072-1)	Tolerance R (reduced)
Vibration severity (acc. to EN 60034-14; IEC 60034-14)	Grade R
Mounted/integrated components	Mounted planetary gear for SH 28 to 132 (geared motors only available with vibration severity grade N)
Cable outlet for terminal boxes	Outlet direction can be selected in steps of 90°

<sup>1)</sup>When using an absolute value encoder and non-ventilated or forced ventilation, the rated torque is reduced by 10 % (refer to the Table, Technical data)

<sup>2)</sup> Power de-rating for temperatures > 40 °C and/or installation altitudes > 1000 m, refer to the Configuration Manual "General Section for Synchronous Motors"

<sup>3)</sup> Forced ventilation cannot be used in the presence of flammable, corrosive, electrically conductive or explosive dust.

<sup>4)</sup> For motors with degree of protection IP67 and IP68, since 01/2001, an M5 inner thread is provided in the cover on the NDE. This allows compressed air to be connected. The pressure in the motor should be within the range from 0.05 to 0.1 bar. The compressed air must be dry and clean. For instance, the DA300 compressed air service unit from the Heidenhain company can be used.

For 1FT6 motors without optical encoders, it is sufficient to have a pre-filter that filters-out any foreign bodies above 3 µm.

For 1FT6 motors with optical encoder, in addition to the pre-filter element, a fine filter is required that filters-out foreign bodies above 0.01 µm.

## 1.4 Order designation

### Order designation (standard types), SH 28 to SH 132 (non-ventilated, forced-ventilated and water-cooled)

1) Only for SH 63, 80, 100

2) Not for force ventilated motors

3) For 1FT6062 - only in conjunction with a water connection, either at the side or below

4) Water connection is only possible at the righthand side (code -ZQ20) or lefthand side (-ZQ21) or at the bottom (-ZQ22).

5) Without code -ZQ2□, the motor will be supplied with a water connection at the top.

Motor Description

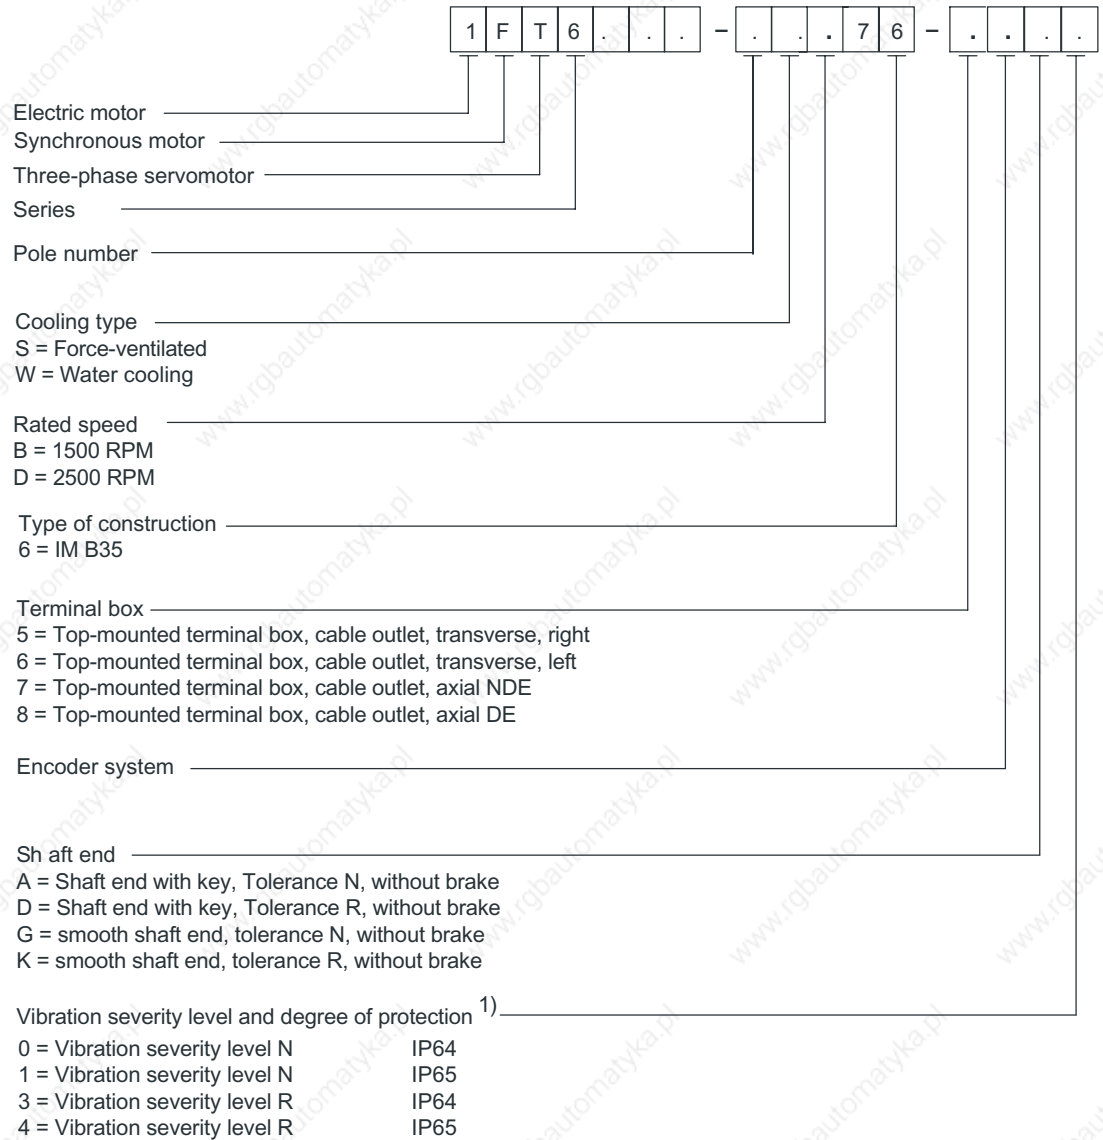

1.4 Order designation

Order designation (core types)

**Order designation for  
SH 132 water cooling and  
SH 160 forced ventilation and water cooling**

<sup>1)</sup> Specified degree of protection is only valid for water cooling; for air cooling, restrictions apply as a result of the mounted fan IP54

Motor Description

25 m C F

Cables are not included with the motors - they must be separately ordered.

- 1) With absolute value encoder (due to the max. temperature of the encoder)
- 2) Power connector and terminal box mutually exclude one another
- 3) Motor with terminal boxes, max. cross-section that can be connected, refer to the Table "Connections for terminal boxes"
- 4) The electrical shock hazard protection of the power cables depends on the size of the selected power module (refer to the Configuration Manual, Drive Converters)
- 5) Motor with terminal boxes, power and signals cables, refer to Catalog, Chapter "Connection system MOTION-CONNECT"
- 6) 6FX8002 = MOTION-CONNECT 800;  
6FX5002 = MOTION-CONNECT 500;  
Technical data, refer to Catalog, Chapter "Connection system MOTION-CONNECT"
- 7) Cables can be supplied in integer lengths of precisely 1 meter;  
Length code, refer to the Configuration Manual "General Part for Synchronous Motors"
- 8) For 1FT613□ motors, the maximum current and the rated current of the converter must be carefully observed.  
1FT616□ motors can only be operated with SIMOVERT MASTERDRIVES MC drive converters.

25 m C F

Cables are not included with the motors - they must be separately ordered.

- 1) With absolute value encoder (due to the max. temperature of the encoder)
- 2) Power connector and terminal box mutually exclude one another
- 3) Motor with terminal boxes, max. cross-section that can be connected, refer to the Table "Connections for terminal boxes"
- 4) The electrical shock hazard protection of the power cables depends on the size of the selected power module (refer to the Configuration Manual, Drive Converters)
- 5) Motor with terminal boxes, power and signals cables, refer to Catalog, Chapter "Connection system MOTION-CONNECT"
- 6) 6FX8002 = MOTION-CONNECT 800;  
6FX5002 = MOTION-CONNECT 500;  
Technical data, refer to Catalog, Chapter "Connection system MOTION-CONNECT"
- 7) Cables can be supplied in integer lengths of precisely 1 meter;  
Length code, refer to the Configuration Manual "General Part for Synchronous Motors"

## 1.6 Armature short-circuit braking

Definition as described in the Configuration Manual "General Section".

### Dimensioning the braking resistors for optimum short-circuit braking

The correct dimensioning ensures an optimum braking time. The braking torques which are obtained are also listed in the tables. Data apply for braking from the rated speed and moment of inertia  $J_{\text{external}} = J_{\text{mot}}$ . If the motor brakes from another speed, then the braking time **cannot** be linearly reduced. However, longer braking times cannot occur if the speed at the start of braking is less than the rated speed.

The data in the following table is calculated for rated values according to the data sheet. The variance during production as well as iron saturation have not been taken into account here. Higher currents and torques can occur than those calculated as a result of the saturation.

The ratings of the resistors must match the particular  $I^2t$  load capability, refer to the Configuration Manual "General Section for Synchronous Motors".

### Non-ventilated

Table 1-3 Resistor braking for the 1FT6 series, shaft heights 28 to 48, non-ventilated

Motor type	Braking resistor external $R_{\text{opt}} [\Omega]$	Average braking torque $M_{\text{br rms}} [\text{Nm}]$		Max. braking torque $M_{\text{br max}} [\text{Nm}]$	rms braking current $I_{\text{br rms}} [\text{A}]$

1FT6168-8WB7□	0.27 <sup>2)</sup>	–	530	680	–	340	

**1.6 Armature short-circuit braking**

- 1) When utilized acc. to  $M_0$  (100 K) a series braking resistor must be used in order to prevent partial de-magnetization. When utilized according to  $M_0$  (60 K), the additional braking resistor is not required.
- 2) It is absolutely prohibited to short-circuit the winding when using smaller supplementary resistors than those specified. When braking from the rated speed, the resistors listed prevent partial de-magnetization of the rotor.

## 1.7 Cooling

### 1.7.1 Cooling types

The different cooling types are defined in the Configuration Manual "General Section for Synchronous Motors"..

### 1.7.2 Forced ventilation

Degree of protection IP54 (acc. to EN 60529).

Degrees of protection IP64, IP65, IP67 and IP68 are not possible

The hot discharged air may not be drawn-in again.

#### Caution

Forced ventilation cannot be used in the presence of flammable, corrosive, electrically conductive or explosive dust.

### Forced ventilation, SH 80 and SH 100

Air flow direction from NDE to DE.

If the air flow direction is reversed, this reduces the torque yield by approx. 20 %.

Mechanical changes to the motor with respect to non-ventilated versions:

- The power connector is about 12 mm higher.
- A sheet metal envelope is located over the motor frame from the non-drive end side. The axial fan is mounted in this sheet metal envelope. There is a cut-out in the sheet metal envelope at the connector positions. This means that the motor is only partially cooled by the air flow (three-sided ventilation).
- The motor dimensions can be taken from the dimension drawings.

Connection:	Connector, Size 1, Order No.: 6FX2003-0CA10
Supply voltage:	1-ph. 230/260 V AC, 50/60 Hz
Maximum current:	0.3 A

Connector assignment for fan connections  
SH 80 and SH 100:

1.7 Cooling

**Forced ventilation, SH 132**

Air flow direction from DE to NDE

The air is blown through the enclosure corners of the extruded profile using a mounted radial fan.

Connection: via terminal box  
Supply voltage: 3-ph. 400/480 V AC, 50/60 Hz  
Maximum current: 0.4 A

**Forced ventilation, SH 160**

Air flow direction from DE to NDE

The air is blow through the enclosure corners of the extruded profile using a mounted radial fan.

Connection: via terminal box  
Supply voltage: 3-ph. 400/480 V AC, 50/60 Hz  
Maximum current: 0.8 A

**Minimum clearance between parts and components mounted by the customer and the air discharge opening**

The following minimum clearance must be maintained between parts and components mounted by the customer and the air discharge opening:

Table 1-8 Minimum clearance to parts and components mounted by the customer

Shaft height [mm]	Minimum clearance [mm]
80	20
100	30
132	60
160	80

### 1.7.3 Water-cooling

The power loss generated by the motor is dissipated using a water cooling system. The machinery construction company must connect-up a cooling system (e.g. heat exchanger).

The rated motor torques, specified in the motor data sheets apply for water-cooled operation and a water intake temperature of < 30 °C.

---

#### Notice

If the motor is operated without water cooling, then the rated motor torque is reduced as a function of the heat losses which can be dissipated by convection and radiation. In this case, the data for non-ventilated operation apply.

---

---

#### Note

It is not possible to retrofit a motor for water cooling.

---

The cooling medium must be pre-cleaned and filtered in order to prevent the cooling circuit from becoming blocked. The maximum permissible particle size after filtering is 100 µm.

### Cooling circuit

---

#### Notice

If current is flowing through the motor, then the cooling circuit must be activated.

---

Table 1-9 Technical data for the cooling circuit

Motor type	Water flow rate [l]	Max. permissible pressure [bar]	Flow rate [l/min]
1FT6062	0.2	2.5	5
1FT6064	0.26	2.5	5
1FT6082	0.4	2.5	5
1FT6084	0.5	2.5	5
1FT6086	0.6	2.5	5
1FT6105	1.1	2.5	5
1FT6108	1.5	2.5	5
1FT6132	2.1	6.0	8
1FT6134	2.4	6.0	8
1FT6136	2.7	6.0	8
1FT6138	3.1	6.0	8
1FT6163	4.7	6.0	10
1FT6168	5.7	6.0	10

Pressure drop, intake/return: < 0.1 bar

**Materials used in the cooling circuits**

The anti-corrosion additives used should be harmonized with the cooling system manufacturer - i.e. the materials of the motor cooler and the materials of the fittings and cooling medium hoses listed in the Table.

Table 1-10 Materials used in the motor cooling circuit

Motor type	Bearing end shield	Enclosure	Sealing agent	Connecting plate
1FT606□ 1FT608□ 1FT610□	Aluminum	Aluminum	Terostat	Stainless steel
1FT613□ 1FT616□	Gray cast iron	Aluminum	Terostat	—

**Cooling medium and anti-corrosion protection**

**Notice**

It is not permissible that ice forms in the cooling circuit, neither in operation nor during storage.

The checking and change intervals for the cooling medium should be harmonized with the companies supplying the anti-corrosion agent and the cooling system.

We recommend that an anti-corrosion agent is added to water as cooling-medium (e.g. Antifrogen N from the Hoechst Company or Tyfocor from Tyforop Chemie GmbH, refer to the Table below).

Observe the specifications of the anti-corrosion agent manufacturer regarding the ratio of water to anti-corrosion agent.

For Tyfocor, the ratio of 75 % water and 25 % anti-corrosion agent should not be exceeded.

When using another cooling medium (e.g. oil, cooling-lubricating medium) de-rating may be required in order that the thermal motor limit is not exceeded. The de-rating can be determined using the following data:

- Specific density:  $\rho$  [kg/m<sup>3</sup>]
- Specific thermal capacitance:  $c_p$  [J/(kg K)]
- Intake temperature:  $t_v$  [°C]
- Flow quantity:  $v$  [l/min]

The enquiry must be sent to the manufacturer's plant (Hotline).

The motor power still does not have to be reduced for oil-water mixtures with less than 10 %.

**Note**

Different anti-corrosion agents should not be mixed.

**Note**

These recommendations involve third-party products which we know to be basically suitable. It goes without saying that similar products from other manufacturers can also be used. Our recommendations should be considered as such. We cannot accept any liability for the quality and properties/features of third-party products.

**Cooling-medium intake temperature**

The intake temperatures should be selected so that no moisture condensation forms on the surface of the motor:  $T_{cool} \leq T_{ambient} - 2^{\circ} C$

The motors are designed for operation up to a cooling medium temperature of +30°C, but still maintaining all of the specified motor data. The continuous torque changes for other intake temperatures.

**Cooling powers to be dissipated**

The values specified in Table refer to a cooling-medium temperature of 30 °C and maximum speed in S1 duty.

Table 1-12 Cooling powers to be dissipated

## **Cooling system**

A cooling system (i.e. heat exchanger) must be used in order to guarantee a cooling medium intake temperature of +30°C. It is possible to operate several motors from a single cooling system. The cooling system is not included in the scope of supply.

Cooling system manufacturer, refer to the Catalog.

The cooling power is calculated from the sum of the power losses of the connected motors. The power of the pump and the distribution to different cooling circuits should be engineered corresponding to the specified flow and the pressure losses of the individual cooling circuits.

If one pump is used with distribution to several cooling circuits, then it may be necessary to use a flow controller.

## 1.8 Coupling output

The KTR company offers the pinion wheels of its Rotex GS couplings with various shore hardnesses. The values specified in Table correspond to pinion wheels recommended by KTR with a Shore hardness of 98 or 95 Sh A GS.

They must be optimally harmonized with the mounted mechanical system. A coupling pre-selection is provided in Table . Please contact the coupling manufacturer for detailed design information. Ordering address, refer to the Configuration Manual "General Section" or Internet [www.ktr.com](http://www.ktr.com).

<sup>1)</sup> d<sub>w</sub> = diameter, motor shaft end

<sup>2)</sup> T<sub>KN</sub> = rated coupling torque

<sup>3)</sup> T<sub>Kmax</sub> = maximum coupling torque

<sup>4)</sup> T<sub>R</sub> = friction-locked torque (torque that can be transmitted with a clamping hub at d<sub>w</sub>)

<sup>5)</sup> values for 95 Sh A GS

### Warning

The accelerating torque may not exceed the friction-locked torque of the coupling!

### Notice

We cannot accept any liability for the quality and properties/features of third-party products.

## Electrical Connections

### 2.1 Connection overview

Figure 2-1 Connection overview SINAMICS S120

## 2.2 Power connection

### 2.2.1 Possible connections

#### Warning

The motors are not designed to be connected directly to the line supply.

#### Connection via power connector or terminal box

Certain motor types can either be connected via power connectors or via terminal boxes.

Several motors types can only be connected through a power connector.

### 2.2.2 Connector connection

#### Connection assignment, power connector at the motor

Figure 2-2 Power connection

### 2.2.3 Connection through a terminal box

- The terminal assignment in the terminal box must be implemented according to the diagram.
- The protective conductor must be connected.
- Cable lugs acc. to DIN 46234 must be used.
- Connect-up an optional brake (refer to the diagram).

#### Notice

Motors with a rated power of more than 100 kW must be grounded using the additional M12 grounding stud provided at the NDE bearing endshield.

Figure 2-3 Terminal assignment in the terminal boxes

2.2 Power connection

Table 2-1 Description of the diagram

No.	Description	No.	Description

1) Data acc. to DIN EN 60204-1 (routing type C, ambient temperature 40° C)

2) BR/BR2 (terminal strip, only for versions with brake)

3) Dependent on the seal used

## 2.3 DRIVE-CLiQ

The encoder system can only be connected to SINAMICS S120 via DRIVE-CLiQ.

The DRIVE-CLiQ interface is either established through the sensor module at the motor (motors with DRIVE-CLiQ) or in the cabinet using sensor module, cabinet-mounted (for motors without DRIVE-CLiQ).

## 2.4 Motors with DRIVE-CLiQ

Motors with DRIVE-CLiQ have a sensor module that includes the encoder evaluation, the motor temperature sensing as well as an electronic rating plate with a unique identification number and motor and encoder-specific data.

These motors with DRIVE-CLiQ can be connected to the corresponding motor module directly via the MOTION-CONNECT DRIVE-CLiQ cables supplied. This means that data is directly transferred to the control unit.

These motors make start-up and diagnostics much easier, as the motor and encoder type can be identified automatically.

Figure 2-4 Connecting encoders for motors with DRIVE-CLiQ

## 2.5 Motors without DRIVE-CLiQ

When fed from SINAMICS S120, motors without DRIVE-CLiQ require a sensor module, cabinet-mounted. The sensor modules evaluate the signals from the connected motor sensors or external sensors and convert them to DRIVE-CLiQ. In conjunction with motor encoders, the motor temperature can also be evaluated using sensor modules. Additional information is provided in the SINAMICS Equipment Manual.

Figure 2-5 Connecting encoders without DRIVE-CLiQ

## 2.6 Rotating the connector at the motor

### Rotating the connector at the motor

The DRIVE-CLiQ interface can be rotated but the amount of rotation is limited.

#### Notice

The permissible range of rotation may not be exceeded.

Do not exceed max. turning torques of 8 Nm.

In order to guarantee the degree of protection, the connector may only be rotated a max. of 10x up to its end stop.

The connector should be rotated using a mating connector attached at the connector thread.

Connecting cables must be secured against tensile stress and bending.

The motors connectors must be secured so that they cannot be rotated any further.

It is not permissible to subject connectors to a continuous force.

Figure 2-6 Connectors can be rotated

*2.6 Rotating the connector at the motor*

## Technical Data and Speed-Torque Diagrams

### 3.1 Speed-torque diagrams

#### 3.1.1 Introduction

---

**Note**

Refer to the Configuration Manual "General Section for Synchronous Motors" for a description of how the voltage limiting characteristics are shifted.

The specified thermal S3 limit characteristics are referred to  $\Delta T = 100$  K for  
1 min cycle duration for SH 28  
10 min cycle duration for SH 36, 48, 63, 80, 100, 132, 160

- for a nominal bearing lifetime of 20.000 h

Figure 3-106 Force application point at the drive shaft end

Dimension  $x$ : Distance between the point of application of force  $F_Q$  and the shaft shoulder in mm.

Dimension  $l$ : Length of the shaft end in mm.

#### Calculating the belt pre-tension force $F_R$

$$F_R [N] = 2 \cdot M_0 \cdot c / d_R$$

$$F_R \leq F_{Qperm}$$

Table 3-64 Explanation of the formula abbreviations

Formula abbreviations	Units	Description
$F_R$	N	Belt pre-tension
$M_0$	Nm	Motor stall torque
$c$	—	Pre-tensioning factor; the pre-tensioning factor is an empirical value from the belt manufacturer. It can be assumed as follows: for toothed belts: $c = 1.5$ to $2.2$ for flat belts $c = 2.2$ to $3.0$
$d_R$	m	Effective diameter of the belt pulley

When using other configurations, the actual forces, generated from the torque being transferred, must be taken into account.

### 3.3 Axial forces

#### Axial force stressing

---

**Warning**

Motors with integrated holding brake cannot be subject to axial forces!

---

When using, for example, helical toothed wheels as drive element, in addition to the radial force, there is also an axial force on the motor bearings. For axial forces, the spring-loading of the bearings can be overcome so that the rotor moves corresponding to the axial bearing play present (up to 0.2 mm).

The permissible axial force can be approximately calculated using the following formula:

$$F_A = 0.35 \cdot F_Q$$

### 3.3 Axial forces

## Motor Components (Options)

### 4.1 Thermal motor protection

A temperature-dependent resistor is integrated as temperature sensor to monitor the motor temperature.

Table 4-1 Features and technical data

Type	KTY 84 (PTC thermistor)
Resistance when cold (20°C)	approx. 580 Ohm
Resistance when hot (100°C)	approx. 1000 Ohm
Connecting	via signal cable
Response temperature	Pre-warning at 120 °C ± 5 °C Alarm/trip at 155 °C ± 5 °C

The resistance of the KTY 84 thermistor changes proportionally to the winding temperature change.

The temperature signal is sensed and evaluated in the drive converter whose closed-loop control takes into account the temperature characteristic of the motor resistances.

When a fault occurs, an appropriate message is output at the drive converter. When the motor temperature increases, a message "Alarm motor overtemperature" is output; this must be externally evaluated. If this signal is not observed, the drive converter shuts down with the appropriate fault message when the motor limiting temperature or the shutdown temperature is exceeded.

#### Warning

If the user carries-out an additional high-voltage test, then the ends of the temperature sensor cables must be short-circuited before the test is carried-out!

If the test voltage is connected to a temperature sensor terminal, then it will be destroyed.

The polarity must be carefully observed.

The temperature sensor is designed so that the DIN/EN requirement for "protective separation" is fulfilled.

4.1 Thermal motor protection

**Caution**

The integrated temperature sensor protects the synchronous against an overload condition

Shaft heights, 28 to 48 up to  $2 \cdot I_{060K}$  and speed  $\ll 0$

from shaft height 63 up to  $4 \cdot I_{060K}$  and speed  $\ll 0$

For load applications that are critical from a thermal perspective - e.g. overload when the motor is stationary or an overload of  $4 \cdot M_0$  longer than 4 s, adequate protection is no longer available. This is the reason that additional protection must be provided.

Figure 4-1 Resistance characteristic of the KTY 84 as a function of the temperature

## 4.2 Encoders

### 4.2.1 Encoder overview

The encoder is selected with the appropriate letters in the motor Order No. (MLFB) at the 14th position.

#### Note

The letter code at the 14th position of the Order No. (MLFB) is different for motors with and without DRIVE-CLiQ.

Table 4-2 Encoders for motors with and without DRIVE-CLiQ

Motor types	Incremental encoders sin/cos 1 Vpp (for low shaft heights) (I-2048)	Incremental encoders sin/cos 1 Vpp (I-2048)	Absolute value encoders EnDat (A-2048)	Absolute value encoders EnDat (A-512)	Resolvers 2-pole/ multi-pole
Order No. (MLFB) 14th position for motors with DRIVE-CLiQ	D	D	F	L	U / P
Order No. (MLFB) 14th position for motors without DRIVE-CLiQ	A	A	E	H	S / T
1FT6 02□	X			X	X
1FT6 03□		X	X		X
1FT6 04□		X	X		X
1FT6 06□		X	X		X
1FT6 08□		X	X		X
1FT6 10□		X	X		X
1FT6 13□		X	X		X
1FT6 16□		X	X		X

#### Notice

When the encoder is replaced, the position of the encoder system with respect to the motor EMF must be adjusted. Only qualified personnel may replace an encoder.

### 4.3 Motors with DRIVE-CLiQ

Motors with DRIVE-CLiQ have a sensor module that includes the encoder evaluation, the motor temperature sensing and an electronic rating plate.

This sensor module instead of the signal connector and has a 10-pin RJ45-plus socket.

#### Caution

The sensor module contains motor and encoder-specific data as well as an electronic rating plate. This is the reason that this sensor module may only be operated on the original motor - and may not be mounted onto other motors or replaced by a sensor module from other motors.

The sensor module has direct contact to components that can be destroyed by electrostatic discharge (ESDS). Neither hands nor tools that could be electrostatically charged may come into contact with the connections.

#### Cables

For all encoder types (incremental encoder, absolute value encoder, resolver), the same DRIVE-CLiQ cable is used.

The following cable should be used to connect an encoder:

Table 4-3 Prefabricated cable

6FX	□	002	-	□DC□□	-	□□□	0
	↓					↓↓↓	
	↓					Length	
		5 MOTION-CONNECT®500				Max. cable length 100 m	
		8 MOTION-CONNECT®800				Max. cable length 50 m	

Only prefabricated cables from Siemens (MOTION-CONNECT) may be used.

Additional technical data and length code, refer to Catalog, Chapter "MOTION-CONNECT connection system"

## 4.4 Motors without DRIVE-CLiQ

### 4.4.1 Incremental encoders

Function:

- Angular measuring system for commutation
- Speed actual value sensing
- Indirect incremental measuring system for the position control loop
- One zero pulse (reference mark) per revolution

Table 4-4 Technical data, incremental encoders sin/cos 1Vpp

Features	Incremental encoders sin/cos 1 Vpp (I-2048)	Incremental encoders sin/cos 1 Vpp (low SH) (I-2048)
Mech. limiting speed	15000 RPM	12000 RPM
Operating voltage	5V ± 5%	5V ± 5%
Current consumption	max. 150 mA	max. 150 mA
Resolution, incremental	2048	2048
Incremental signals	1 Vpp	1 Vpp
Angular error	± 40"	± 80"
C-D track (rotor position)	available	available

## 4.4.2 Absolute value encoders

Function:

- Angular measuring system to impress current
- Speed actual value sensing
- Absolute measuring system for the position control loop

Table 4-7 Technical data, absolute value encoder

Features	Absolute value encoders EnDat (A-2048)	Absolute value encoders EnDat (A-512)
Mech. limiting speed	12000 RPM	12000 RPM
Operating voltage	5V ± 5%	5V ± 5%
Current consumption	max. 300 mA	max. 200 mA
Resolution, incremental (periods per revolution)	2048	512
Resolution, absolute (coded revolutions)	4096	4096
Incremental signals	1 Vpp	1 Vpp
Serial absolute position interface	EnDat	EnDat
Angular error	± 40"	± 80"

### Note

As a result of the reduced maximum operating temperature of absolute value encoders with respect to incremental encoders, the thermally permissible rated motor torque is reduced by 10%.

### 4.4.3 Resolvers

**Notice**

A max. operating frequency of 470 Hz must be maintained for SINAMICS S120.

Function:

- Speed actual value sensing
- Rotor position encoder for inverter control
- Indirect incremental measuring system for the position control loop

Table 4-9 Technical data, resolvers

Features	Resolvers
Mech. limiting speed	15 000 RPM
Excitation voltage	5 V (rms) to 13 V (rms)
Excitation frequency	4 kHz to 10 kHz
Current consumption	< 80 mA (rms)
Angular accuracy (bandwidth)	
2-pole	< 14'
multi-pole	< 4'
Pole number (The pole number is identical with the motor pole number)	2, 4, 6 or 8
Ratio	0.5

4.5 Holding brake (option)

## 4.5 Holding brake (option)

For a description of the function, refer to the Configuration Manual "General Section for Synchronous Motors".

The holding brake cannot be retrofitted! Motors with holding brake are longer by the mounted space required (refer to the dimension drawing).

Table 4-12 Technical data of the holding brakes used for 1FT6 motors

Motor type	Brake type	Holding torque M <sub>4</sub> <sup>1)</sup>	Direct current	Opening time with varistor	Closing time with varistor	Highest switching energy
		[Nm]	[A]	[ms]	[ms]	[J]
1FT602□	EBD 0.11 B	1	0.3	20	10	9

1FT613□ <sup>2)</sup>	EBD 8 B	140	1.7	300	90	9800

<sup>1)</sup> Standardized acc. to VDE 0580 with varistor circuitry

<sup>2)</sup> not for water cooling

### Holding torque M<sub>4</sub>

The holding torque M<sub>4</sub> is the minimum brake torque in steady-state operation (when the motor is at a standstill).

## 4.6 Gearbox (option)

### 4.6.1 Introduction

When engineering/dimensioning gearboxes, refer to the documentation "General Section"

### 4.6.2 Planetary gearbox 1-stage

Code						
Gearbox shaft <u>with</u> fitted key	J12	J13	J15	J16	J17	
Gearbox shaft <u>without</u> fitted key	J32	J33	J35	J36	J37	

- 1) Values for cyclic/positioning duty S3 60 %
- 2) referred to the center of the drive-out shaft
- 3) refer to footnote 3 on the next page

Ordering data: 1FT6□□□-□A□7□-1□□1-Z

Prerequisites for mounting a planetary gearbox:

IP65, smooth motor shaft end, radial eccentricity N and vibration severity grade N.

Z = J □□ (SP060S to SP180S and SP210/SP240 in a horizontal type of construction)

Z = J □□ + M1□ (SP210 to SP240 in a vertical type of construction)

### Continuous duty S1 (power-on duration > 60% or > 20 min.):

For continuous operation, corresponding to the definition, the limit values from the table below apply for:

- Motor speed  $n_{1N}$  (RPM)
- Drive-out torques  $T_{2N}$  (Nm)
- Max. gearbox temperature, 90°C

Planetary gear 2-stage		Available gear ratios $i =$				
		16	20	28	40	50
Type						
SP 060S - MF2	$n_{1N}$	4400	4400	4400	4400	4800
	$T_{2N}$	26	26	26	26	26
SP 075S - MF2	$n_{1N}$	3500	3500	3500	3500	3800
	$T_{2N}$	75	75	75	75	75
SP 100S - MF2	$n_{1N}$	3100	3100	3100	3100	3500
	$T_{2N}$	180	180	180	180	175
SP 140S - MF2	$n_{1N}$	2900	2900	2900	2900	3200
	$T_{2N}$	360	360	360	360	360
SP 180S - MF2	$n_{1N}$	2700	2700	2700	2700	2900
	$T_{2N}$	750	750	750	750	750
SP 210 - MF2 <sup>3)</sup>	$n_{1N}$	2100	2100	2100	2300	2300
	$T_{2N}$	1000	1000	1000	1000	1000
SP 240 - MF2 <sup>3)</sup>	$n_{1N}$	1900	1900	1900	2100	2100
	$T_{2N}$	1700	1700	1700	1700	1700

<sup>3)</sup> Caution For these versions, the amount of oil depends on the mounting position - for types of construction a "9" should be set at the 12th position of the Order No. (MLFB) and a **second** code is required:

Type of construction IM V1: **M1H**

Type of construction IM V3: **M1G**

# Index

## A

Absolute value encoders, 4-7  
Additive, 1-25  
Armature short-circuit braking, 1-15  
Axial force stressing, 3-133

## B

Brake resistors, 1-15

## C

Cantilever force diagrams, 3-128  
Cantilever force stressing, 3-128  
Characteristics, 3-1  
Connector assignment  
    Brake, 2-2  
    Encoder, 2-2  
    Power, 2-2  
Cooling, 1-21  
Cooling medium, 1-24  
Cooling powers to be dissipated, 1-26  
Coupling output, 1-28

## D

Danger and warning information, v  
Dimension drawings, 5-1

## E

Encoders, 4-3  
ESDS instructions, vii

## G

Gearbox  
    1-stage, 4-13  
    2-stage, 4-18

## H

Holding brake, 4-12  
Hotline, iv

## I

Incremental encoders, 4-5  
Interfaces, 2-1

## O

Options, 1-4  
Order designation  
    Core types, 1-6  
    Standard types, 1-5

## R

Resistance characteristic, 4-2  
Resistor braking, 1-15  
    Force ventilated, 1-18  
    Non-ventilated, 1-15  
    Water cooling, 1-19  
Resolvers, 4-10

## S

Speed-torque diagrams  
    Force ventilated, 3-62  
    Non-ventilated, 3-2  
    Water cooling, 3-94  
Standard engineering, 1-1

## T

Technical data  
    nN 1500 RPM, 1-8  
    nN 2000 RPM, 1-10  
    nN 2500 RPM, 1-11  
    nN 3000 RPM, 1-12

## Index
