# PERMANENT MAGNET DC SERVOMOTORS - USER INFORMATION

## E.C. DIRECTIVES

There are 3 main directives that effect applications incorporating servomotors.

### Machinery Directive 89/392/EEC

This directive applies to complete machines.

In accordance with the directive, SEM provides a Certificate of Incorporation which includes installation instructions and general service guidelines in different languages.

### Low Voltage Directive 73/23/EEC

This directive applies to electrical equipment for use with a DC voltage of 75V to 1500V and AC voltage of 50V to 1000V.

SEM DC servomotors in the ranges MT22, MT30, MT40 and MT52 conform to the EC directive.

A certificate of conformity is available from SEM sales on request.

### EMC Directive (Electro Magnetic Compatibility) 89/336/EEC.

This directive applies to products or appliances with an intrinsic function for the end user in which:

1. They contain electrical/electronic systems liable to cause an electro magnetic disturbance.
2. They contain electrical/electronic systems which may have their performance affected by an electromagnetic disturbance.

SEM can provide data sheets outlining the EMC characteristics of a standard SEM DC servomotor and giving advice on cable screening and other related subjects.

SEM will be pleased to discuss any EMC related problem encountered by customers incorporating SEM DC servomotors into such products or appliances which are governed by the EMC directive.

## GENERAL DESCRIPTION

This range of DC Servomotors has been specially designed to meet the application requirements of Machine Tools, Transfer Lines, Robotics and the like. They provide a high torque to inertia ratio, giving fast acceleration and rapid dynamic response. Our data sheets give the full specification.

The motors are suitable for most servo and variable speed applications and are compatible with most drives available. It must be remembered that all SEM data on its range of Servomotors assumes unity Form Factor (i.e. pure DC) and that derating of the motor may be necessary when supplied from a power source exceeding unity Form Factor.

SEM DC brushed servomotors are rated for the temperature rises specified in NEMA standard MG1 part 12.63.2.

### Receiving & Storage

On receipt the motors should be inspected. Any damage found should be reported immediately to SEM and the carrier.

The shaft and flange have been coated with a rust inhibitor; this can be removed with a suitable solvent.

If the motors are not to be put into service immediately they should be stored in a clean dry location, and should be run on a light load or no load prior to being put in service. This is to clean any possible filming that may occur due to oxidation on the commutators .

### Nameplate Information

When contacting SEM regarding a motor, the type and serial number should be quoted.

### Location/Accessibility

The motors should be installed such that they are readily accessible for routine inspection and maintenance.

### Environmental Protection

SEM Servomotors are protected against ingress of fluid and dust to the following degrees:-

The MT22 range is protected to IP65 (IP64 at drive end shaft seal).

The MT30, 40 and 52 ranges are protected to IP44/65 as standard, IP54 is available as an option. This increases to IP64/65 when

a shaft seal (option WO1) is fitted and the fixing boltholes are sealed. Blower ventilated motors are protected to the following degrees:- The MT30 blower ventilated range is protected to IP20. The MT40 and 52 blower ventilated ranges are protected to IP10.

### Mounting of Motors

Where a toothed belt drive is proposed the motors should be face or flange mounted to an angle bracket, or similar, as close as possible to the line of action of the drive. The motor pulley should be positioned as close as possible to the mounting face and the pulley diameter chosen to maintain dynamic shaft loading within the limits indicated on the loading graphs. Particular attention must be given to tensioning of drive belts, with reference to belt manufacturers instructions, so that unnecessarily high shaft loads are avoided on installation.

When a motor is close coupled to a reduction gearbox, it is strongly recommended that to withstand the reaction of high output torques, the complete unit is fitted to the final product by attachment at the gearbox, not by foot mounting the motor.

A foot mounting option is available on SEM servomotors but this should generally be restricted to in-line drives where high lateral moments can be avoided.

### Electrical Connections

A diagram plate is fitted under the terminal box lid. (Or attached to each motor in the case of motors fitted with an MS connector).

**IMPORTANT** - When the motor is to be used in a closed loop circuit, the polarity of the tacho relative to the rotation of the motor must be as diagram plate. Incorrect polarity could cause the motor to over-speed. Commutator flashover and field demagnetisation could occur.

Viewed from main shaft end:

ROTATION	MOTOR	TACHO
Clockwise	A1 Positive	T1 Positive
	A2 Negative	T2 Negative
Anti-Clockwise	A2 Positive	T2 Positive
	A1 Negative	T1 Negative

### Thermal Protection

MT30, 40 and 52. Servomotors have fitted as standard equipment a thermal protector to monitor temperature and protect the armature winding. The protector contacts are of the normally closed type and should be connected in such a manner as to shut down the motor controller when the contacts open.

Under continuous full Load conditions the motor body can be expected to reach a maximum temperature of 100C° before the trip operates. **IMPORTANT** - The protector can only be relied upon to sense over temperature produced by long term overload operation of the motor. As the motor has a large thermal mass, short duration high currents will not be sensed by the thermal overload and could result in damage to the motor. The overload is not capable of switching motor line currents and must be used only in the motor drive circuitry.

### Maintenance & Servicing

All routine maintenance can be carried out by the user, but it is recommended that, for major repairs and reconditioning, the motor be sent to an approved motor repair specialist or returned to SEM. If the motor is to be dismantled, any feedback package fitted to the rear shaft, the tachometer armature, and any electrical connections must be removed first.

### Brushes - Motor

It is recommended that the motor brushes in the commutator end housing be inspected for wear every 500 hours of operation or at intervals which are found satisfactory after a usage pattern has been established. The brushes, under normal usage, should give 4,000 hours of life on a unity form factor drive. When the brush has worn to 7mm it should be replaced. Only recommended spares obtainable from SEM should be fitted, as brush grade and spring

tension have been specially selected for the motors. Brushes should move freely in their holders and care should be taken to ensure that good contact is made between the brush tag and the brush holder. When inspecting for carbon brush wear, we recommend that any carbon brush dust is cleared from the motor by removal of **all** the brushes from their holders, and blowing clean, dry air into one of the brush holders.

**IMPORTANT** - It must be noted that commutation and brush wear progressively deteriorate as the commutation limit is approached. If required acceleration or deceleration results in operation regularly close to the limit brushlife will be considerably reduced.

### Commutator

The normal colour of the commutator is dark brown: do not remove this film unless commutator is in poor condition. Minor cleaning of the commutator can be carried out by removing one brush and inserting a glass fibre cleaning stick of brush cross sectional area, and rotating the armature; remove other brushes and blow out after cleaning.

### Permanent Magnet Field

The permanent magnets used in our Servomotors are made from a highly coercive ferrite material and are designed to withstand high demagnetising fields. The field will be demagnetised if a momentary current exceeds the peak current rating given on the data sheet. Special note should be made when using thyristor drives. The permanent magnet field is open circuit stabilised and the motor armature removal will not affect subsequent motor performance.

On blower ventilated machines, despite the inlet filter, there may be a danger that metal particles and foreign matter may enter the air outlet holes by attraction of the permanent magnets. Care must be taken with ventilated machines.

Should the magnets become demagnetised for any reason the machine must be returned to SEM for re-magnetising.

### Bearings

All Servomotors are fitted with single row radial ball bearings, double shielded and permanently lubricated and under normal conditions require no maintenance.

If the commutator end bearing is to be removed, care should be taken so as not to damage or distort the rear shaft extension or shaft pin, as these must run to close tolerances.

### Tachometer

The tachometer fits over the main shaft and has a permanent magnet field. This device is a precision instrument and must be treated with care. Foreign matter must not be allowed to enter this area.

The brushes and commutator should be maintained in the same manner as the motor parts.

It is essential that the undercutting is maintained free from mica and copper swarf and the commutator surface is free of burrs to keep the ripple performance within tolerance.

When re-assembling brush ring to motor, note alignment mark to retain correct orientation of parts for optimum performance.

### Holding Brake Options

A fail safe brake is available as a standard option.

The brake is primarily a holding brake. For example:- to hold a vertical feed axis under a no voltage condition, however, it can also in some applications be used for emergency stopping.

The brake is located in front of the armature, the stationary body is built into the drive end cover.

The brake fitted is of the "Springset" fail to safe type.

The brake should be connected so that when the motor is started the brake coil is energised, thus releasing the brake. Under normal operating conditions no maintenance is required other than making sure the armature and stationary plates are kept free from foreign matter. Ratings are as follows:-

Frame	Brake Holding Torque	Voltage (DC)	Power (Guide only) Consumed
MT22	2 Nm	24v (90v)	6.3 Watts (9 Watts)
MT30	5 Nm	24v (90v)	11 Watts (13 Watts)
MT40	18 Nm	24v (90v)	27 Watts (27 Watts)
MT52	18 Nm	24v (90v)	27 Watts (27 Watts)

Other voltages DC and AC can be ordered

### Blower Options

The motor of the blower type used by SEM is sealed for life and should require no maintenance under normal usage.

The inlet filter should be cleaned at regular intervals, as a dirty filter would restrict the airflow through the servomotor, causing overheating. When dirty this filter can be regenerated by washing in warm water with added detergent and drying.

### Mechanical

It is recommended that a general inspection be made at regular intervals to check all bolts, nuts, couplings, etc. to make sure they have not worked loose, and thus prevent serious damage.

### End Cover Alignments

The proper orientation of the motor end cover to the motor body is necessary for optimum performance of the motor; an alignment mark should be scribed over end housing and adjacent shell before dismantling, so machine can be re-assembled with correct orientation.

The drive end cover is pinned to the shell. The developed torque of the motor is transmitted by the pins and associated friction between D.E. cover and shell.(Not applicable to MT22)

The commutator end housing is not pinned, as under normal conditions no torque is transmitted.

### Recommended Stand By Replacement Parts List per motor.

MOTOR PART	MOTOR TYPE				
	MT22	MT30	MT40	MT52	DBMT52
Motor Brush	Qty 2	Qty 4	Qty 4	Qty 8	Qty 16
Brush Caps	2	4	4	8	16
Brush Cap Sealing Discs	2	4	4	8	16
Tacho Brush Ring Assembly complete with Brushes	1	1	1	1	1

Note: When ordering replacement parts the motor Serial No. stamped on Nameplate must be quoted, along with the Type No. so that proper selection of parts can be made.

### Fault Finding

Note: Trouble which at first appears to be with the motor may in many cases lie outside the motor

PROBLEM	POSSIBLE CAUSES
No Rotation at Motor Shaft	1 Check Fuses and Connections 2 Brushes Worn Past Limit 3 Motor Load Excessive 4 Motor Overload Open Circuit 5 Armature Open Circuit 6 Brake Failure on Motors Fitted with Brake
Excessive Brush Arcing	1 Motor Load Excessive 2 Armature Input Current or Voltage Excessive 3 Damaged Commutator 4 Motor Speed Exceeding Maximum 5 Incorrect Brush Grade 6 Incorrect Neutral Setting 7 Shorted/Earthed Armature
Over Speed	1 Armature Volts Over Limit 2 Wrong Connection Motor/Tacho 3 No Tacho Output 4 Field Demagnetised
Poor Tachometer Ripple	1 Tacho Brushes Not Seated 2 Incorrect Neutral Setting 3 Shorted Tachometer Armature 4 Rough Commutator Surface
Noise/Vibration	1 Loose Components/Through Bolt 2 Defective Bearings 3 Armature Incorrectly Balanced

● P00	IP64 / IP65	Enclosure protection IP65. Shaft sealing IP64
P01	IP44	Enclosure protection IP44 when cable exit C22 is incorporated
● W01	SHAFT SEAL	Oil seal fitted at drive end/shaft interface
P99	TROPICALISED	Special treatment on internal parts
<b>BRAKES</b>		
B00	24V DC BRAKE	2 Nm torque, 24V DC supply
B01	90V DC BRAKE	2 Nm torque, 90V DC supply
L01	RECTIFIER	110V AC input, 90V DC output for B01 (supplied loose for external mounting)
<b>ELECTRICAL TERMINATIONS</b>		
● C00	LEADS OUT	0.5 metre long radial exit (No terminal box)
C01	MS CONNECTOR (IP44)	Receptacle MS3102A-24-7P (16 Pin) fitted to rear side cast cover G08 (IP44)
C04	MS PLUG & CABLE CLAMP FOR C01 (IP65)	Straight plug MS3106A-18-1S and cable clamp 97-3057-1010-1 (IP44)
C12	MS CONNECTOR (IP65)	Receptacle MS 3102E-24-7P (16 pin). As C01 but IP65
C13	MS PLUG & CABLE CLAMP FOR C12 (IP65)	Straight plug MS 3106E-18-1S (IP65)
C22	TWIN LEADS OUT (IP44 ONLY)	See page 12. Separate motor and tachometer leads out 0.5 m long secured to motor body
<b>TACHOGENERATORS</b>		
T07	TACHOGENERATOR	7V/1000 RPM
● T95	TACHOGENERATOR	9.5V/1000 RPM
T14	TACHOGENERATOR	14V/1000 RPM
N99	NO TACHOGENERATOR	No velocity feedback
<b>ENCODERS</b>		
E01	ENCODER	HEIDENHAIN ERN1120 Series - 250 PPR
E02	ENCODER	HEIDENHAIN ERN1120 Series - 500PPR
E03	ENCODER	HEIDENHAIN ERN1120 Series - 1000 PPR
<b>ENCODER FITTINGS</b>		
A04	ENCODER ADAPTOR	for BEC 755 encoder & SUMTAK model LHT encoder
A08	ENCODER ADAPTOR	for Heidenhain 1251/2 encoder
G01	ENCODER COVER (IP65)	Cast cover with 1 X M10 tapped hole and cable gland
G02	ENCODER COVER (IP65)	Cast cover with 1 X PG7 tapped hole and cable gland
C04	MS PLUG & CABLE CLAMP FOR G08 (IP44)	Straight plug MS3102A-24-7S & cable clamp 97-3057-1016-1
G08	ENCODER COVER (IP44)	Cast cover with receptacle MS3102A-24-7P (16 Pin) fitted
G14	ENCODER COVER (IP65)	Cast cover with receptacle MS 3102E-24-7P (16 Pin)
G26	MS PLUG & CABLE CLAMP FOR G14 (IP65)	Straight plug MS 3102E-24-7PS (IP75)

■ **Motor Performance** data is on the basis of a pure D.C. i.e. unity system form factor supply. Appropriate performance derating is necessary when using a supply with a system form factor greater than unity.

■ **Commutation Curves** opposite and peak torque are based on the **peak value** of the current wave form. For a form factor greater than unity the maximum torque permitted will be lower than that detailed on the performance curves. **IMPORTANT** The commutation curves are based on a load inertia equal to the motor inertia. Advice should be taken in the event the load inertia is greater than the motor inertia.

● **Heatsink Ratings** Torque ratings shown in brackets (opposite top right) are correct for motors when fitted to a heatsink size (300mm x 300mm x 12mm)  
(12" x 12" x 0.5")

**STALL TORQUE 1.2Nm / 10.6lb-in**

**● (1.4Nm / 12.4lb-in)**

■ **Motor Performance** data is on the basis of a pure D.C. i.e. unity system form factor supply. Appropriate performance derating is necessary when using a supply with a system form factor greater than unity.

■ **Commutation Curves** opposite and peak torque are based on the **peak value** of the current wave form. For a form factor greater than unity the maximum torque permitted will be lower than that detailed on the performance curves. **IMPORTANT** The commutation curves are based on a load inertia equal to the motor inertia. Advice should be taken in the event the load inertia is greater than the motor inertia.

● **Heatsink Ratings** Torque ratings shown in brackets (opposite top right) are correct for motors when fitted to a heatsink size (300mm x 300mm x 12mm)  
(12" x 12" x 0.5")

Please quote No. and reference of options along with motor type No. when placing an order.

If options or features are required which are not detailed below, they may be possible, so please ask SEM sales.

NO.	REFERENCE	DESCRIPTION
<b>MECHANICAL INTERFACE</b>		
● M00	FACE	See page 29
M05	FLANGE	See page 31
R01	CLOSE TOLERANCE INTERFACE	Interface (face & shaft) to IEC72 PRECISION (DIN 42955 Tolerance R)
● S00	SHAFT	See page 29
S01	SHAFT	14mm Dia x 30mm Long
● K00	KEYWAY	See page 29
K99	NO KEYWAY	Plain Shaft
D01	SHAFT END TAPPED	M6 x 15mm Deep tapped in drive shaft
H01	HAND CRANK	Rear shaft to enable hand rotation of motor
<b>MOTOR PROTECTION</b>		
● P00	IP44/65	Enclosure protection IP44/65 as supplied. IP64/65 if shaft seal is fitted and fixing bolt holes are sealed
W01	SHAFT SEAL	Oil seal fitted at drive end/shaft interface
P99	TROPICALISED	Special treatment on internal parts
<b>BRAKES</b>		
B00	24V DC BRAKE	5 Nm torque 24V DC supply
B01	90V DC BRAKE	5 Nm torque 90V DC supply
L01	RECTIFIER	110V AC input 90V DC output for B01 Mounted inside motor terminal box (supplied loose for external mounting when motor MS Connectors are fitted)
<b>FORCED VENTILATION</b>		
V00	220V BLOWER	220 volt 50HZ single phase input
V01	110V BLOWER	110 volt 50HZ single phase input
V99	PREPARED FOR BLOWER	Motor prepared for blower but no blower fitted (covers are fitted over blower preparation)

NO.	REFERENCE	DESCRIPTION
<b>ELECTRICAL TERMINATIONS</b>		
● C00	TERMINAL BOX	With 2 x M20 tapped holes
C01	TERMINAL BOX	With 2 x PG16 tapped holes
C02	MS CONNECTOR (IP44)	Receptacle MS3102A-18-1P(10 pin) fitted to terminal box
C03	MS PLUG AND CABLE CLAMP FOR C02 (IP44)	Straight plug MS3106A-18-1S and Cable clamp 97-3057-1010-1
C09	FLYING LEADS OUT	0.5 metre long (No terminal box) radial exit
C10	MS CONNECTOR (IP65)	Receptacle MS3102E-18-1P(10 pin) fitted to terminal box
C11	MS PLUG & CABLE CLAMP FOR C10 (IP65)	Straight plug MS 3106E-18-1S (IP65)
<b>TACHOGENERATORS</b>		
T07	TACHOGENERATOR	7V/1000 RPM
● T95	TACHOGENERATOR	9.5V/1000 RPM
T19	TACHOGENERATOR	19.5V/1000 RPM
T30	TACHOGENERATOR	30V/1000 RPM
N99	NO TACHOGENERATOR	No velocity feedback
<b>ENCODERS</b>		
E01	ENCODER	HEIDENHAIN ERN1120 Series - 250 PPR
E02	ENCODER	HEIDENHAIN ERN1120 Series - 500 PPR
E03	ENCODER	HEIDENHAIN ERN1120 Series - 1000 PPR
<b>ENCODER FITTINGS</b>		
A01	ENCODER ADAPTOR	for Heidenhain ROD 426, 436, 456, Litton G60 & Leine & Linde type 63
A02	ENCODER ADAPTOR	for Heidenhain ROD 420 & 450
A03	ENCODER ADAPTOR	for Muirhead H25E & Litton G70
A04	ENCODER ADAPTOR	for BEC 755
A05	ENCODER ADAPTOR	for Tamagawa TS5300 series
A06	ADAPTOR	for Size 11 resolver
A10	SYNCHRO CLAMPS	for A01, A03 and A06
G01	ENCODER COVER	Cast cover with 1 X M10 tapped hole, and cable gland for A04 only
G02	ENCODER COVER (IP65)	Cast cover with 1 X PG7 tapped hole, and cable gland for A04 only
G03	ENCODER COVER (IP44)	Cast cover with MS receptacle MS3102A-18-1P, for A04 only
G07	ENCODER COVER (IP65)	Cast cover with 2 x axial exit cable glands for A05 & A06 only
G15	ENCODER COVER (IP65)	Cast cover with MS receptacle MS 3102E-18-1P for A04 only (IP65)
C05	MS PLUG AND CABLE CLAMP FOR G03 (IP44)	Straight plug MS3106A-18-1S Cable clamp 97-3057-1010-1 (IP44)
C11	MS PLUG & CABLE CLAMP FOR G15 (IP65)	Straight plug MS3106E-18-1S & cable clamp (IP65)

Standard features are shown by ● in black.

Available fitted options are shown in red.

Please quote No. and reference of option along with motor type No. when placing an order.

If options or features are required which are not detailed below, they may be possible, so please ask SEM sales.

NO.	REFERENCE	DESCRIPTION
<b>MECHANICAL INTERFACE</b>		
● M00	FLANGE	See page 41
M02	FACE	See page 43
R01	CLOSE TOLERANCE INTERFACE	Interface (face & shaft) to IEC72 PRECISION (DIN 42955 Tolerance R)
● S00	SHAFT	See page 41
● K00	KEYWAY	See page 41
K99	NO KEYWAY	Plain shaft
D01	SHAFT END TAPPED	M8 x 15mm Deep tapped in drive shaft
H01	HAND CRANK	Rear shaft to enable hand rotation of motor
<b>MOTOR PROTECTION</b>		
● P00	IP44/65 PROTECTION	Enclosure protection IP44 at shaft. IP65 for remainder of motor. IP64/65 if option W01 shaft seal is fitted
W01	SHAFT SEAL	Oil seal fitted at drive end/shaft interface
P99	TROPICALISED	Special treatment on internal parts
<b>BRAKES</b>		
B00	24V DC BRAKE	18 Nm torque 24V DC supply
B01	90V DC BRAKE	18 Nm torque 90V DC supply
L01	RECTIFIER	110V AC input 90V DC output for B01 mounted inside motor terminal box (supplied loose for external mounting when motor MS Connectors are fitted)
<b>FORCED VENTILATION</b>		
V00	220V BLOWER	220 volt 50HZ single phase input
V01	110V BLOWER	110 volt 50HZ single phase input
V99	PREPARED FOR BLOWER	Motor prepared for blower but no blower fitted (covers are fitted over blower preparation)

NO.	REFERENCE	DESCRIPTION
<b>ELECTRICAL TERMINATIONS</b>		
● C00	TERMINAL BOX	With 2 x M20 tapped holes
C01	TERMINAL BOX	With 2 X PG16 tapped holes
C02	MS CONNECTOR (IP44)	Receptacle MS3102A-24-11P(9 pin) fitted to motor (IP44)
C03	MS PLUG AND CABLE CLAMP FOR C02 (IP44)	Straight plug MS3106A-24-11S and Cable clamp 97-3057-1016-12 (IP44)
C09	FLYING LEADS OUT	0.5 metre long (No terminal box radial exit)
C10	MS CONNECTOR (IP65)	Receptacle MS 3102E-24-11P (9 pin) fitted to motor (IP65)
C11	MS PLUG (IP65)	Straight plug MS 3106E-24-11S (IP65)
<b>TACHOGENERATORS</b>		
T07	TACHOGENERATOR	7V/1000 RPM
● T95	TACHOGENERATOR	9.5V/1000 RPM
T19	TACHOGENERATOR	19.5V/1000 RPM
T30	TACHOGENERATOR	30V/1000 RPM
N99	NO TACHOGENERATOR	No velocity feedback
<b>ENCODERS</b>		
E01	ENCODER	HEIDENHAIN ERN1120 Series - 250 PPR
E02	ENCODER	HEIDENHAIN ERN1120 Series - 500 PPR
E03	ENCODER	HEIDENHAIN ERN1120 Series 1000 PPR
<b>ENCODER FITTINGS</b>		
A01	ENCODER ADAPTOR	for Heidenhain ROD 426, 436, 456, Litton G60 & Leine & Linde type 63
A02	ENCODER ADAPTOR	for Heidenhain ROD 420 & 450
A03	ENCODER ADAPTOR	for Muirhead H25E & Litton G70
A04	ENCODER ADAPTOR	for BEC 755 & SUMTAK model LHT
A05	ENCODER ADAPTOR	for Tamagawa TS5300 series
A06	ADAPTOR	for Size 11 resolver
A10	SYNCHRO CLAMPS	for A01, A03 and A06
G01	ENCODER COVER	Cast cover with 1 X M10 tapped hole, and cable gland for A04 only
G02	ENCODER COVER (IP65)	Cast cover with 1 X PG7 tapped hole, and cable gland for A04 only
G03	ENCODER COVER (IP44)	Cast cover with MS receptacle MS3102A-18-1P, for A04 only
G07	ENCODER COVER (IP65)	Cast cover with 2 x axial exit cable glands for A05 & A06 only
G15	ENCODER COVER (IP65)	Cast cover with MS receptacle MS 3102E-18-1P for A04 only (IP65)
C05	MS PLUG AND CABLE CLAMP FOR G03 (IP44)	Straight plug MS3106A-18-1S (IP44) Cable clamp 97-3057-1010-1
C27	MS PLUG & CABLE CLAMP FOR G15 (IP65)	Straight plug MS3106E-18-1S (IP65)

■ **Motor Performance** data is on the basis of a pure D.C. i.e. unity system form factor supply. Appropriate performance derating is necessary when using a supply with a system form factor greater than unity.

■ **Commutation Curves** opposite and peak torque are based on the **peak value** of the current wave form. For a form factor greater than unity the maximum torque permitted will be lower than that detailed on the performance curves. **IMPORTANT** The commutation curves are based on a load inertia equal to the motor inertia. Advice should be taken in the event the load inertia is greater than the motor inertia.

■ **Motor Performance** data is on the basis of a pure D.C. i.e. unity system form factor supply. Appropriate performance derating is necessary when using a supply with a system form factor greater than unity.

■ **Commutation Curves** opposite and peak torque are based on the **peak value** of the current wave form. For a form factor greater than unity the maximum torque permitted will be lower than that detailed on the performance curves. **IMPORTANT** The commutation curves are based on a load inertia equal to the motor inertia. Advice should be taken in the event the load inertia is greater than the motor inertia.

# STALL TORQUE 28 - 37Nm / 250 - 330lb-in

FACE & SPIGOT ARE SQUARE & CONCENTRIC TO SHAFT WITHIN 0.10 TOTAL INDICATOR READING (0.05 FOR OPTION R01 ONLY)

RUN OUT OF SHAFT WITHIN 0.05 TOTAL INDICATOR READING

STANDARD TOLERANCES CONFORM TO IEC72 (DIN 42955 TOLERANCE N)  
 OPTION R01 CLOSE TOLERANCES CONFORM TO IEC72 PRECISION (DIN 42955 TOLERANCE R)

**NON DRIVE END SHAFT ARRANGEMENT**

**DRIVE END INTERFACE TOLERANCES**

DIMENSIONS IN MILLIMETRES FOR INCH SERIES SEE DRAWING C5152/0

**SHAFT LOADING LIMITS**

The above graph may be used as a guide for applications and includes an adequate safety factor for normal industrial use. If axial loads are to be applied, SEM should be consulted. Where radial loading in excess of the above maximum is deemed essential, the specific case should be referred to SEM.

Standard features are shown by ● in black.

Available fitted options are shown in red.

Please quote No. and reference of options along with motor type No. when placing an order.

If options or features are required which are not detailed below, they may be possible, so please ask SEM sales.

NO.	REFERENCE	DESCRIPTION
<b>MECHANICAL INTERFACE</b>		
● M00	FLANGE	See page 59
M02	FACE	See page 61
R01	CLOSE TOLERANCE INTERFACE	Interface (face & shaft) to IEC72 PRECISION (DIN 42955 Tolerance R)
● S00	SHAFT	See page 59
● K00	KEYWAY	See page 59
K99	NO KEYWAY	Plain shaft
D01	SHAFT END TAPPED	M12 x 20mm Deep tapped in drive shaft
H01	HAND CRANK	Rear shaft to enable hand rotation of motor
<b>MOTOR PROTECTION</b>		
● P00	IP44/65 PROTECTION	Enclosure protection IP44 at shaft. IP65 for remainder of motor. IP64/65 if shaft seal option W01 is fitted
W01	SHAFT SEAL	Oil seal fitted at drive end/shaft interface
P99	TROPICALISED	Special treatment on internal parts
<b>BRAKES</b>		
B00	24V DC BRAKE	18 Nm torque 24V DC supply
B01	90V DC BRAKE	18 Nm torque 90V DC supply
L01	RECTIFIER	110V AC input 90V DC output for B01 Mounted inside terminal box (supplied loose for external mounting when motor MS Connectors are fitted)
<b>FORCED VENTILATION</b>		
V00	220V BLOWER	220 volt 50HZ single phase input
V01	110V BLOWER	110 volt 50HZ single phase input
V99	PREPARED FOR BLOWER	Motor prepared for blower but no blower fitted (covers are fitted over blower preparation)

NO.	REFERENCE	DESCRIPTION
<b>ELECTRICAL TERMINATIONS</b>		
● C00	TERMINAL BOX	With 1x M20 and 1 x M25 tapped holes
C01	TERMINAL BOX	With 1 x PG16 and 1 x PG21 tapped holes
C02	MS CONNECTORS (IP44)	Motor receptacle MS3102A-32-5P (2 pin) and Feedback receptacle MS3102A-14S-6P (6 pin) fitted to motor
C03	MS PLUGS AND CABLE CLAMPS FOR C02 (IP44)	MS3106A-32-5S and MS3106A-14S-6S straight plugs and cable clamps 97-3057-1020-1 and 97-3057-1007-1
C09	FLYING LEADS OUT	0.5 metre long radial exit (No terminal box)
C10	MS CONNECTORS (IP65)	Motor receptacle MS 3102E-32-5P (2 pin) and feedback receptacle MS 3102E-14S-6P (6 pin) fitted to motor
C11	MS PLUGS FOR C10 (IP65)	MS 3106E-32-5S and MS 3106-14S-6S straight plugs
<b>TACHOGENERATORS</b>		
T07	TACHOGENERATOR	7V/1000 RPM
● T95	TACHOGENERATOR	9.5V/1000 RPM
T19	TACHOGENERATOR	19.5V/1000 RPM
T30	TACHOGENERATOR	30V/1000 RPM
N99	NO TACHOGENERATOR	No velocity feedback
<b>ENCODERS</b>		
E01	ENCODER	HEIDENHAIN ERN1120 Series - 250 PPR
E02	ENCODER	HEIDENHAIN ERN1120 Series - 500 PPR
E03	ENCODER	HEIDENHAIN ERN1120 Series - 1000 PPR
<b>ENCODER FITTINGS</b>		
A01	ENCODER ADAPTOR	for Heidenhain ROD 426, 436, 456, Litton G60 & Leine & Linde type 63
A02	ENCODER ADAPTOR	for Heidenhain ROD 420 & 450
A03	ENCODER ADAPTOR	for Muirhead H25E & Litton G70
A04	ENCODER ADAPTOR	for BEC 755 & SUMTAK model LHT
A05	ENCODER ADAPTOR	for Tamagawa TS5300 series
A06	ADAPTOR	for Size 11 resolver
A10	SYNCHRO CLAMPS	for A01, A03 and A06
G01	ENCODER COVER (IP65)	Cast cover with 1 X M10 tapped hole, and cable gland for A04 only
G02	ENCODER COVER (IP65)	Cast cover with 1 X PG7 tapped hole, and cable gland for A04 only
G03	ENCODER COVER (IP44)	Cast cover with MS receptacle MS3102A-18-1P, for A04 only (IP44)
G07	ENCODER COVER (IP65)	Cast cover with 2 x axial exit cable glands for A05 & A06 only
G15	ENCODER COVER (IP65)	Cast cover with MS receptacle MS 3102E-18-1P for A04 only (IP65)
C05	MS PLUG AND CABLE (IP44) CLAMP FOR G03	Straight plug MS3106A-18-1S Cable clamp 97-3057-1010-1
C27	MS PLUG FOR G15 (IP65)	MS 3106E-18-1S (IP65) Straight plug
