Precautions

- Please refer to "PCB Relays Common Precautions" for correct use.

Correct Use

●Coil Voltage Reduction (Holding Voltage) after Relay Operation

- If the coil voltage is reduced to the holding voltage after Relay operation, first apply the rated voltage to the coil for at least 100 ms, as shown below.
- A voltage of at least 35% of the rated voltage is required for the coil holding voltage. Do not allow voltage fluctuations to cause the coil holding voltage to fall below this level.

	Applied coil voltage	Coil resistance*	Power consumption
Rated voltage	100%	17.9Ω (5 VDC)	Approx. 1400 mW
Holding voltage	35%	102.9Ω (12 VDC)	
		411.4Ω (24 VDC)	

* The coil resistance were measured at a coil temperature of 23°C with tolerances of ± 10%.

●Other Precautions

- This Relay is suitable for power load switching of air-conditioning compressors and power supplies, etc. Do not use this Relay to switch micro loads less than 100 mA, such as in signal applications.
