## PHOTOELECTRIC ROTARY ENCODER

The photoelectric rotary encoder A58 is used to establish an informational link between the key machine components, industrial robots, comparators and DCC, NC or Digital Readout Units. It provides information about the value and direction of the motion. The encoder is used in automatic control, on-line gauging, process monitoring systems, etc.

Three versions of output signals are available:

- A - sinusoidal signals, with amplitude approx. 1  $\mu$ App;
- AV - sinusoidal signals, with amplitude approx. 1 Vpp;
- F - square-wave signals TTL or HTL.
