

# 1398 ULTRA Series™ 230V Brushless Servo Motors

## Product Data

This publication provides product information for the 0.17 to 50 N-m (1.5 to 450 lb-in.) 1398 ULTRA Series™ 230V, Low-to-Medium Inertia, Brushless Servo Motors. This publication includes:

- Detailed lists of the features and options available for 1398 ULTRA Series 230V, Low-to-Medium Inertia, Brushless Servo Motors
- Performance data and speed-torque curves for the entire 1398 ULTRA Series Servo motor family
- Servo motor dimensions

## Servo Motor Introduction

The 1398 ULTRA Series servo motors feature ferrite, neodymium-iron-boron, high-energy ring and high-energy neodymium magnet rotors. These compact, brushless servo motors are intended to be used with the Allen-Bradley 1398 Motion Control System. The motors in this series are:

- F-Series
- H-Series
- N-Series
- Y-Series

## Determining Which Motor to Use

Use the following table to determine which family of motors you need.

Motors	Description	Typical Applications
F-Series (see page 9)	<ul style="list-style-type: none"> <li>• Medium inertia brushless servo motors</li> <li>• Ferrite magnet that provides greater inertia for matching larger loads</li> <li>• Available in two frame sizes—mechanically interchangeable with H-Series</li> <li>• Continuous torque from 3.5 to 28 N-m (31 to 245 lb-in.)</li> <li>• Speeds up to 4000 RPM</li> <li>• 2000-line incremental encoder standard</li> <li>• Environmental connectors, IP65 enclosure rating</li> </ul>	<ul style="list-style-type: none"> <li>• Web processing</li> <li>• Machine tool</li> <li>• Textile machinery</li> <li>• CAM replacement</li> </ul>
H-Series (see page 22)	<ul style="list-style-type: none"> <li>• Low inertia brushless servo motors</li> <li>• Neodymium-iron boron magnet to provide low inertias for high acceleration</li> <li>• Available in five frame sizes</li> <li>• Continuous torque from 0.5 to 50 N-m (5 to 450 lb-in.)</li> <li>• Speeds up to 6000 RPM</li> <li>• 2000-line incremental encoder standard</li> <li>• Environmental connectors, IP65 enclosure rating</li> </ul>	<ul style="list-style-type: none"> <li>• Smart conveyors</li> <li>• Packaging machinery</li> <li>• Material feeding</li> <li>• Pick-and-place machines</li> <li>• High duty cycle applications</li> </ul>
Y-Series (see page 41)	<ul style="list-style-type: none"> <li>• Small, low inertia brushless servo motors</li> <li>• High-energy Neodymium magnet to provide low inertias for high acceleration</li> <li>• Available in three popular metric frame sizes</li> <li>• Continuous torque from 0.17 to 2.5 N-m (1.5 to 22 lb-in.)</li> <li>• Speeds up to 4500 RPM</li> <li>• Available in either 115V or 230V windings</li> <li>• IP43 enclosure rating</li> </ul>	<ul style="list-style-type: none"> <li>• Robotics</li> <li>• Material handling</li> <li>• X-Y tables</li> <li>• Specialty machinery</li> <li>• Semiconductor manufacturing</li> </ul>

### Determining Possible Drive/Motor Combinations

Use the following table to determine which motors can be used with which drives:

Motors:	Drives:		
	ULTRA 100	ULTRA 200	ULTRA Plus
F-Series	X	X	X
H-Series	X	X	X
Y-Series	X	X	NA
N-Series	X	X	X <sup>1</sup>

<sup>1</sup> Excluding N-23xx motors.

Note: To learn more about the ULTRA Series drives family, see publication 1398-2.0.

## F-Series Motors

F-Series motors, mechanically interchangeable with H-Series motors, use a Ferrite magnet to provide nearly four times greater inertia than the H-Series family for matching larger load inertias. Available in two frame sizes, the F-Series motors range in continuous torque capability from 3.5 to 28 N-m, (31 to 245 lb-in.) and reach speeds up to 4000 RPM. The F-Series motors use an optical 2000-line incremental encoder with a 5000-line option for superior low-speed performance with the ULTRA Series. Typical applications for the F-Series include web processing, machine tool, textile machinery, and CAM replacements. When you install the optional motor shaft seal, the motor meets the IP65 requirements of the IEC standard.

### Features

The F-Series motors have the following features:

- Compact design that is mechanically interchangeable with the H-Series family
- Two frame sizes, six models
- Continuous torque from 3.5 to 28 N-m (31 to 245 lb-in.)
- Speeds up to 4000 RPM
- Ferrite permanent magnet rotors provide approximately four times greater rotor inertia than the H-Series family for matching larger load inertias
- Internal thermal switch indicates overheating
- Motor-mounted optical encoder included 2000 quadrature pulses, index pulse, and standard commutation channels for drives
- Water tight MS connections are compatible with standard cable assemblies; in addition, the extruded aluminum housing and environmental connectors provide an IP65 package (with the addition of the optional shaft seal kit)
- Economical, compact design ready for harsh environments
- Optional spring-set holding brakes available with 24V DC
- Axially-trapped front bearing in a steel insert for long life at high speeds
- Vibration: 2.5 g peak 3-2000Hz
- Shock: 10.0 g peak 6 ms duration
- UL recognized

## Typical Applications

Typical applications for the F-Series motors are:

- Web and film processing
- Machine tool/metal cutting
- Textile machinery
- CAM replacements

## Characteristics

- Higher inertia matching capability
- Heavy duty continuous operations
- Environmentally rugged

## Selecting a Drive/Motor Combination

The following drive/motor combinations are available for the F-Series motors:

Motor	ULTRA 100	ULTRA 200	ULTRA Plus

		1398-DDM-150	1398-PDM-100

<sup>1</sup> Continuous current/torque is limited to 5.2 N-m (46.0 lb-in.).

<sup>2</sup> Peak torque is limited to 18.6 N-m (164.6 lb-in.).

## F-Series Specifications

This section contains the mechanical, thermostat and winding specifications for the F-Series motor family, as well as the load force ratings and performance specifications for every combination of ULTRA series drives and F-Series motors. It also provides motor dimensions, connector pin and signal designations, and all motor and connector ordering information.

### Storage and Operating Specifications

Storage and Operating Conditions	
Ambient Temperature	Operating: 0 to 40°C (32 to 104°F) Storage: -30 to 70°C (-25 to 158°F)
Relative Humidity	5% to 95% non-condensing

### F-Series Thermostat Specifications

Specifications	
Rated voltage	0 - 250V DC or 50/60 Hz AC <sup>1</sup>
Rated current	2.5A at power factor of 1.0 1.6A at power factor of 0.6
Maximum switching current	5 A
Contact resistance	Less than 0.10 Ohms maximum
Contacts	Normally closed
Insulation dielectric	Mylar Nomex capable of withstanding 1500V AC RMS 50/60 Hz for 1 minute
Opening temperature (±5°C)	140°C

<sup>1</sup> The thermostat is normally used as a switch for a 24V DC logic signal.

### F-Series Standard Motor Radial Load Force Ratings

Specifications	Units	F-4030	F-4050	F-4075	F-6100	F-6200	F-6300
500 RPM	kg (lbs)	34.5 (76)	39.9 (88)	41.7 (92)	72.1 (159)	78.0 (172)	83.0 (183)

4000 RPM	kg (lbs)	17.2 (38)	20.0 (44)	20.9 (46)	NA	NA	NA

Motors are capable of carrying an axial load in most applications according to the following general guidelines. These guidelines should only be used as approximations.

- When the motor shaft has no radial load, the axial load rating is 100% of the radial load rating from the table above.
- When the motor shaft has both a radial and an axial load, the axial load rating is 44% of the radial load rating from the table above.

### Brake Motor Application Guidelines

The brakes offered as options on these servo motors are holding brakes. They are designed to hold the motor shaft at 0 rpm for up to the rated brake holding torque. The brakes are spring-set type, and release when voltage is applied to the brake coil.

The brakes are *not* designed for stopping rotation of the motor shaft. Servo drive inputs should be used to stop motor shaft rotation. The recommended method of stopping motor shaft rotation is to command the servo drive to decelerate the motor to 0 rpm, and engage the brake after the servo drive has decelerated the motor to 0 rpm.

If system main power fails, the brakes can withstand use as stopping brakes. However, use of the brakes as stopping brakes creates rotational mechanical backlash that is potentially damaging to the system, increases brake pad wear and reduces brake life. The brakes are *not* designed nor are they intended to be used as a safety device.

A separate power source is required to disengage the brake. This power source may be controlled by the servo motor controls, in addition to manual operator controls.

## Wire and Contact Sizing Recommendations

### Power Connector

The following connector contact sizes and wiring gages are recommended for cabling to a motor.

Motor	Contact AWG (mm <sup>2</sup> )	Wire AWG (mm <sup>2</sup> )
F-4030	12 (3.0)	16 (1.5)
F-4050		14 (2.5)
F-4075		
F-6100	8 (8.6)	12 (4)
F-6200		8 (10)
F-6300		

- Sizes are recommended minimum values for 4 conductors (R, S, T and GND).
- Wiring should be twisted.
- Local regulations should always be observed.

### Encoder Connector

Contact AWG (mm <sup>2</sup> )	Wire AWG (mm <sup>2</sup> )
All F-Series 16 (1.5)	24 (0.25) 22 (0.34) with BRU Drives 22 (0.34) with BSA Drives

### Brake Connector

Contact AWG (mm <sup>2</sup> )	Wire AWG (mm <sup>2</sup> )
All F-Series 16 (1.5)	18 (0.75)

- These specifications are the recommended minimum mechanical size.
- Local regulations should always be observed.

## H-Series Motors

H-Series motors use a neodymium-iron-boron magnet to provide low inertias and high accelerations. Available in five frame sizes, the H-Series motors range in continuous torque capability from 0.5 to 50 N-m (5 to 450 lb-in.) and reach speeds up to 6000 RPM. The H-Series motors use an optical 2000-line incremental encoder with a 5000-line option for superior low-speed performance with the ULTRA Series. Typical applications for the H-Series include smart conveyors, packaging machinery, material feeding, pick-and-place machines, and high duty cycle applications. When you install the optional motor shaft seal, the motor meets the IP65 requirements of the IEC standard.

### Features

The H-Series motors have the following features:

- Compact design that is mechanically interchangeable with the F-4000 and F-6000 Series motors
- Five frame sizes, twelve models
- Continuous torque from 0.5 to 50 N-m (5 to 450 lb-in.)
- Speeds up to 6000 RPM
- Neodymium-iron-boron permanent magnet rotors provide low inertias for high accelerations
- Internal thermal switch indicates overheating
- Motor-mounted optical encoder included 2000 quadrature pulses, index pulse, and standard commutation channels for trapezoidal drives
- Water tight MS connections are compatible with standard cable assemblies; in addition, the extruded aluminum housing and environmental connectors provide an IP65 package (with the addition of the optional shaft seal kit)
- Economical, compact design ready for harsh environments
- Optional spring-set holding brakes available with 24V DC
- Axially-trapped front bearing in a steel insert for long life at high speeds
- Vibration: 2.5 g peak 30-2000Hz
- Shock: 10.0 g peak 6 ms duration
- UL recognized

## Typical Applications

Typical applications for the H-Series motors are:

- Smart conveyors
- Packaging machinery
- Punch press/material feeding
- Robotic pick-and-place
- High duty cycle applications

## Characteristics

- High acceleration and peak torques
- High-speed point-to-point positioning
- Environmentally rugged

Motors are capable of carrying an axial load in most applications according to the following general guidelines. These guidelines should only be used as approximations.

- When the motor shaft has no radial load, the axial load rating is 100% of the radial load rating from the table above.
- When the motor shaft has both a radial and an axial load, the axial load rating is 44% of the radial load rating from the table above.

## Brake Motor Application Guidelines

The brakes offered as options on these servo motors are holding brakes. They are designed to hold the motor shaft at 0 rpm for up to the rated brake holding torque. The brakes are spring-set type, and release when voltage is applied to the brake coil.

The brakes are *not* designed for stopping rotation of the motor shaft. Servo drive inputs should be used to stop motor shaft rotation. The recommended method of stopping motor shaft rotation is to command the servo drive to decelerate the motor to 0 rpm, and engage the brake after the servo drive has decelerated the motor to 0 rpm.

If system main power fails, the brakes can withstand use as stopping brakes. However, use of the brakes as stopping brakes creates rotational mechanical backlash that is potentially damaging to the system, increases brake pad wear and reduces brake life. The brakes are *not* designed nor are they intended to be used as a safety device.

A separate power source is required to disengage the brake. This power source may be controlled by the servo motor controls, in addition to manual operator controls.

### Wire and Contact Sizing Recommendations

#### Power Connector

The following connector contact sizes and wiring gages are recommended for cabling to a motor.

Motor	Contact AWG (mm <sup>2</sup> )	Wire AWG (mm <sup>2</sup> )
H-2005	16 (1.5)	16 (1.5)
H-3007		
H-3016		
H-4030	12 (4.0)	14 (2.5)

H-6100	8 (8.6)	12 (4.0)
H-6200		8 (10.0)
H-6300		
H-8350	4 (21.6)	6 (16.0)
H-8500		

- Sizes are recommended minimum values for 4 conductors (R, S, T and GND).
- Wiring should be twisted.
- Local regulations should always be observed.

## Y-Series Motors

Y-Series motors, available in either 115V or 230V windings, use high energy neodymium magnets that provide low inertias for fast accelerations.

Available in three popular metric frame sizes, the Y-Series motors range in continuous torque capability from 0.17 to 2.5 N-m (1.5 to 22 lb-in.) and reach speeds up to 4500 RPM. Their outstanding torque-to-size ratios make the Y-Series a powerful combination with the ULTRA 100 and 200 drives. Typical applications for the Y-Series include robotics, material handling, X-Y tables, specialty machinery, and semiconductor manufacturing. IP43 enclosure protection is standard.

### Features

The Y-Series motors have the following features:

- 115V and 230V windings
- Popular metric mounting dimensions
- Three frame sizes, ten models
- Continuous torque from 0.17 to 2.5 N-m (1.5 to 22 lb-in.)
- Motor-mounted optical encoder with differential line driver data (2000-line) and commutation signal
- Low inertia rotor
- High energy neodymium magnets
- Speeds up to 4500 RPM
- Optional internally mounted spring set, magnetic release 24V DC holding brake
- IP43 package
- Vibration: 2.5 g peak 30-2000 Hz
- Shock: 10.0 g peak 6 ms duration

## Typical Applications

Typical applications for the Y-Series motors are:

- Robotics
- Material handling
- Specialty machinery
- Medical and laboratory equipment
- X-Y tables
- Light packaging machines
- Office machinery
- Postal sorting

### Brake Motor Application Guidelines

The brakes offered as options on these servo motors are holding brakes. They are designed to hold the motor shaft at 0 rpm for up to the rated brake holding torque. The brakes are spring-set type, and release when voltage is applied to the brake coil.

The brakes are *not* designed for stopping rotation of the motor shaft. Servo drive inputs should be used to stop motor shaft rotation. The recommended method of stopping motor shaft rotation is to command the servo drive to decelerate the motor to 0 rpm, and engage the brake after the servo drive has decelerated the motor to 0 rpm.

If system main power fails, the brakes can withstand use as stopping brakes. However, use of the brakes as stopping brakes creates rotational mechanical backlash that is potentially damaging to the system, increases brake pad wear and reduces brake life. The brakes are *not* designed nor are they intended to be used as a safety device.

A separate power source is required to disengage the brake. This power source may be controlled by the servo motor controls, in addition to manual operator controls.

## N-Series Motors

N-Series motors use a high-energy ring magnet rotor construction for an outstanding torque-to-size ratio. Available in four common NEMA style frame sizes, N-Series motors, matched with an ULTRA Series drive, create a high performance alternative to stepper systems. It also provides an excellent solution when interfacing to gear boxes, sprockets, and pulleys because of the standard NEMA mounting frames. The nine motors in the N-Series family range in continuous torque capability from 0.18 to 5.9 N-m (1.6 to 52 lb-in.) and reach speeds up to 6000 RPM. Typical applications for the N-Series include web processing, machine tool, textile machinery, and CAM replacements. When you install the optional motor shaft seal, the motor meets the IP65 requirements of the IEC standard.

### Features

The N-Series motors have the following features:

- Rugged industrial construction
- NEMA 23, 34, 42, and 56 style mounting frames
- Continuous torque from 0.18 to 5.9 N-m (1.6 to 52 lb-in.)
- Speeds up to 6000 RPM
- High torque-to-size ratio
- High energy ring magnet rotor
- Internal thermal switch indicating overheating
- Optional internally mounted spring set, magnetic release 24V DC holding brake
- Motor mounted optical encoder includes 2000 quadrature pulses (1000 pulses for N-23xx motors), index pulse, and standard commutation channels for drives
- Water-tight, nickel-plated MS connections are compatible with standard cable assemblies.
- The extruded aluminum housing and environmental connectors provide an IP65 package (with the optional shaft seal kit)

## Typical Applications

Typical applications for the N-Series motors are:

- Machine tools
- Material handling
- Web processing
- Robotics
- Packaging machinery

## Characteristics

- High performance stepper replacement
- NEMA mounting provides excellent mechanical interface
- Environmentally rugged

## N-Series Specifications

This section contains the mechanical, thermostat and winding specifications for the N-Series motor family, as well as the load force ratings and performance specifications for every combination of ULTRA series drives and N-Series motors. It also provides motor dimensions, connector pin and signal designations, and all motor and connector ordering information.

Motors are capable of carrying an axial load in most applications according to the following general guidelines. These guidelines should only be used as approximations.

- When the motor shaft has no radial load, the axial load rating is 100% of the radial load rating from the table above.
- When the motor shaft has both a radial and an axial load, the axial load rating is 44% of the radial load rating from the table above.

### Brake Motor Application Guidelines

The brakes offered as options on these servo motors are holding brakes. They are designed to hold the motor shaft at 0 rpm for up to the rated brake holding torque. The brakes are spring-set type, and release when voltage is applied to the brake coil.

The brakes are *not* designed for stopping rotation of the motor shaft. Servo drive inputs should be used to stop motor shaft rotation. The recommended method of stopping motor shaft rotation is to command the servo drive to decelerate the motor to 0 rpm, and engage the brake after the servo drive has decelerated the motor to 0 rpm.

If system main power fails, the brakes can withstand use as stopping brakes. However, use of the brakes as stopping brakes creates rotational mechanical backlash that is potentially damaging to the system, increases brake pad wear and reduces brake life. The brakes are *not* designed nor are they intended to be used as a safety device.

A separate power source is required to disengage the brake. This power source may be controlled by the servo motor controls, in addition to manual operator controls.

### F-Series Motor and Connector Ordering Information

Note: Optional configurations or encoder line counts have extended lead times and additional charges

Note: Options are not available in all sizes

\* The maximum speed with the 5000-line encoder is 2400 RPM because of the frequency output limit of the encoder.
