

## 2. Maximum Rated Values

Items	Specified value
Power Supply Voltage	-0.3~4.5V DC
Usable Ambient Temperature	-20~+60°C (-4~+140°F) Do not use in a freezing or condensation environment.
Storage Temperature	-20~+70°C (-4~+158°F)

## 3. Electrical Characteristic

[Measuring conditions: Ambient temperature 25°C(77°F)]

(\*4)(\*5) : "Sleep mode" or "Standby mode" is for 1  $\mu$ A current consumption version. Please refer to "TIMING CHART" below.

## TIMING CHART

1. Digital output (1  $\mu$ A current consumption)

## [Modes]

- 1) Sleep Mode : When the output is OFF. The electrical current consumption is approximately 1  $\mu$ A.
- 2) Standby Mode : After the sensor's output reaches ON status, the sensor switches to standby mode. The electrical current consumption is ~ 1.9  $\mu$ A. When the sensor's output returns to an OFF value after expiration of the "hold time", the sensor switches again to sleep mode.
- 3) Mask Mode : Time during which the output is forced to OFF after the end of the standby mode. (no detection is possible during this period.)

## [ Durations ]

- t1(Twu): Circuit Stability Time: ~ 25s (typ.)  
During this stage, the output's status is undefined (ON/OFF) and detection is not guaranteed.
- t2 : Standby Hold Time: ~ 2.6s (typ.)  
Depending on the number of output occurrences during standby mode, the hold time can differ (※1)
- t3 : Mask Time ~ 1.3s (typ.)  
During this stage, even if the sensor detects something, output will not switch ON.(※2)

2. Digital Output (2  $\mu$ A and 6  $\mu$ A current consumption)

[Durations]

Twu : Circuit Stability Time (2  $\mu$ A): ~ 25s (typ.)  
 Circuit Stability Time (6  $\mu$ A): ~ 30s (max.)  
 During this stage, output status is undefined (ON/OFF) and detection is not guaranteed.

**DETECTION PERFORMANCE**

1) Standard detection type

2) Long Distance detection type

2. Detection Zone Notes

As shown on the diagram, the detection zone is polarized. If a target enters the detection zones + and - at the same time, the signals are respectively cancelled and detection could become impossible at maximum detection range. (Please refer to the detection area diagram for details)
