^{1.} DC Interrupting Rating (measured at rated voltage, time constant of less than 50 microseconds, battery source).

^{2.} DC Cold Resistance are measured at <10% of rated current in ambient temperature of 20 °C - FOR REFERENCE ONLY - CONTROLLED VALUES HELD BY PLANT AND SUBJECT TO CHANGE WITHOUT NOTICE.

^{3.} Typical Pre-arcing I²t are measured at rated DC voltage, 10I_n current (not to exceed interrupting rating).

^{4.} The insulation resistance after breaking capacity test is higher than 0.1 $M\Omega$ when measured by 2X rated voltage.

^{5.} Device designed to carry rated current for 4 hours minimum. An operating current 80% or less of rated current is recommended, with further design derating required at elevated ambient temperature. See Temperature Derating Curve on next page.
