APPLICATION NOTE:

The CV7 Mechanical Latch for CA7 may be used for both AC and DC applications; however when using DC control circuit the user must apply the following rules for coil selection of the contactor and latch combination:

- When DC control circuits are required use CA7-9...55 contactors with AC coil and latch with AC coil. From column "VDC" in the table on the left, identify the required application DC control voltage and then select its specific Coil Code. Enter this Coil Code to complete the catalog numbers for both the contactor and latch (i.e.: 125V DC control circuit should use a 240Z coil code in both the CA7-9...55 and CV7). This works because both coils are only momentary energized and coil clearing contacts breaks the circuit after closing or opening.
- The above statement does NOT apply to applications CA7-60D...97D two-winding DC coil contactors. When DC control circuits are required use CA7-60D...97D contactors with standard two winding DC coil and the CV7 latch with AC coil selected from the table, top left. (i.e.: 125V DC control circuit should use 125DD coil code in the contactor and 240Z AC coil code in the CV7 latch).
- The CA7-9E...55E contactor uses an electronic DC coil and the CV7 latch coil code should be chosen from the table on the left. (i.e.: 24V DC control circuit select CA7-9E...55E with code 24E and CV7 latch uses a 48Z AC coil code).

① Other voltages available. Contact your Sprecher + Schuh representative.

② CV7 must be wired for momentary operation only.

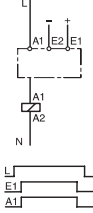

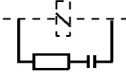

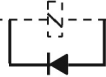

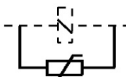

③ Use 600V AC when 575 V is required.

④ Command duration 0.03...10 seconds.

⑤ Coil operating limits on CV7-11 match those of the contactor it is being used with.

⑥ Not for use with CA7-90 (4-pole) contactors.

- ① Control voltage 18...30V DC (10...15mA)
- ② Minimum actuation current is 5 volts, 2ma. The leakage current is <1mA for the following:
 - CR17E-12 @ 2.5 VDC input
 - CR17E-24 @5 VDC input
 - CR17E-48 @ 10 VDC input.
- ③ Electronic DC Contactors (CA7-9E...55E) include internal surge protection and do not require additional external surge protection.

AC Voltage Sag Immunity Modules

Module	Description	Full-Wave Bridge Rectifier		Catalog Number	Price
		Module Input	Module Output		
		Control circuit voltage range	For use with CA7-60...97 contactors with DC coil		
	SEMI-F47-Module	24-250 VAC	24-250 VDC ⓘ	CA7-SF47	109
	Semi-F47-Module with 1...30s on-delay timer	110-250 VAC	110-250 VDC ⓘ	CA7-SF47A30	175

Sprecher + Schuh's CA7-SF47 module meets the Semi-F47 AC voltage sag immunity requirements to 50% voltage sag for 200 ms. Voltage sags can affect the readiness and operation of contactors and starters, resulting in shut downs, lost production, and diminished revenue. It is essential for process equipment to be compatible with its electrical environment. The CA7-SF47 voltage sag immunity module is an essential component to achieve equipment reliability during voltage sag events.

Product Features

- Meets Semi-F47 standard requirements
- For use with CA7-60...97 contactors with DC coils. A full-wave bridge rectifier internal to the CA7-SF47 module provides AC to DC coil voltage rectification.
- Suitable for contactor range (with screw terminals)
 - CA7-60...97, 3-Pole contactors
 - CA7-90, 4-Pole contactor
- Optional 1 to 30 seconds On-Delay timer function.

Benefits

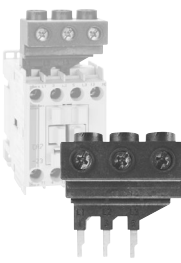

- Direct mounting to the coil terminals of the CA7 contactors. Only 24 mm is added to the component height.
- Direct electrical connection to the contactor. Customer coil power connections are made at the terminals of the CA7-SF47 module
- The CA7-SF47A30 module includes a 1 to 30 seconds adjustable On-Delay timer in addition to the voltage sag immunity functionality. Two independent functions in a single module.

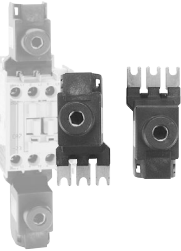

VOLTAGE SAG DURATION				VOLTAGE SAG
Seconds	Milliseconds	Cycles at 60 hz	Cycles at 50 hz	Percent (%) of Equipment Nominal Voltage
< 0.05 s	< 50 ms	< 3 cycles	< 2.5 cycles	Not specified
0.05 to 0.2 s	50 to 200 ms	3 to 12 cycles	2.5 to 10 cycles	50%
0.2 to 0.5 s	200 to 500 ms	12 to 30 cycles	10 to 25 cycles	70%
0.5 to 1.0 s	500 to 1000 ms	30 to 60 cycles	25 to 50 cycles	80%
> 1.0 s	> 1000 ms	> 60 cycles	> 50 cycles	Not specified

ⓘ Input AC control circuit voltage must be matched when selecting the contactor/relay DC coil voltage.

Wye-Delta Starter Kits ①

Wye-Delta power wiring kits were designed to aid in the field assembly of open-transition wye-delta starters that use CA7 contactors. These kits include line, load and start-point (shorting) connections. Assembling a wye-delta starter requires the use of the following components:

- Contactors and overload relay
- Mechanical / Electrical Interlock (Cat.No: CM7-02)
- Electronic Wye-delta Timer (Cat. No: CRZY7-30-110/240)
- Dovetail Connector to couple 1M and 2M contactor (Cat. No: CA7-S9); optional

Note: The "DD" coils listed above include an integrated bidirectional diode. Drop out time of this design is significantly improved when compared to an external diode. See ratings on page A68.

- ① Other coil voltages may be available. Contact your Sprecher + Schuh representative for information.
- ② DC Codes in bold letters and shaded indicate coils that are standard stocked items.
- ③ Voltage operating range: $0.65 \dots 1.3 \times U_s$
- ④ Voltage operating range: $0.7 \dots 1.25 \times U_s$
- ⑤ CA7-60D...97D contactors have a two winding coil with built-in late break auxiliary contact and coil suppression.
- ⑥ CA7-9E...55E electronic coils are not interchangeable with non-electronic DC or AC coils
- ⑦ AC and DC coils on CNX-xxx contactors are not interchangeable.
