Advanced Technologies

EDWANZ group

Deutronic Elektronik GmbH is an innovative and reliable partner for the realisation of customised projects. For more than a quarter of a century high-tech power supplies, power supply systems, as well as test and inspection systems have been manufactured in Lower Bavaria, time and again setting new standards of excellence.

Production began in 1983 in a small, rented workshop in Adlkofen. But by 1986 the employees moved to the ca. 30 000 m² company site with its new company buildings including a 1800m² production facility. In 1991 the building was again increased by 4600m² and in the meantime an additional 4000m² extension is planned.

Initially the main market focus was on the telecommunications sector. But in the meantime the customer base has increased to include many industrial branches. Due to continuous development of the products close to the market, Deutronic Elektronik GmbH has secured the market leadership for automobile charging technology in manufacturing facilities worldwide. Nearly all well-known automobile manufacturers use chargers respectively complete production line power supplies from Deutronic Elektronik GmbH. For more than 2 years high-performance equipment for lithium-ion batteries for E vehicles and their applications have been produced, (6kW cascadable up to 30kW).

Likewise Deutronic Elektronik GmbH has become a market leader with its measurement and test department using test automats for serial production e.g. for servo-motors, transformers, stators, power supply testing, etc. The easy to use software offers the required solution for every test assignment. Management and QS data can be remotely accessed as well as the remote programming of the test data.

Apart from a large portfolio of standard products Deutronic Elektronik GmbH as an OEM manufacturer also develops and manufactures specific solutions for customers worldwide. Use of its professional development teams and individual customer support result in a multitude of discerning high-tech customised solutions - „Made by Deutronic“!

* further possible versions: 12/15/36/54/69/110 VDC

*¹⁾ input 130-350VDC respectively 400-780VDC

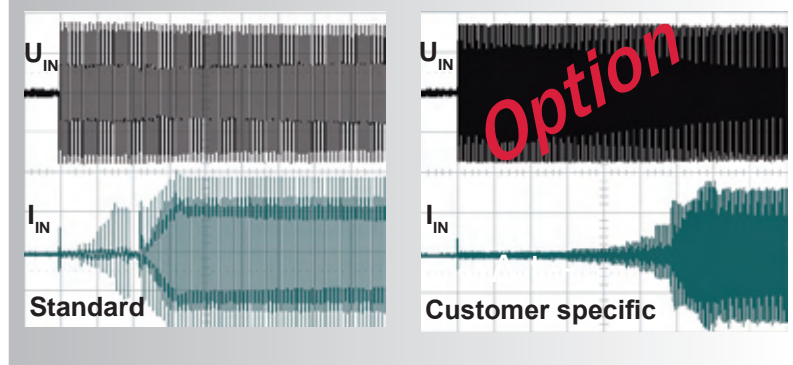

Further characteristics

- Environmentally protected against moisture, dust and corrosive atmospheres through coated modules
- Input 1AC / 3AC
- Low standby power (<1,5W)
- Very high efficiency factor up to 94%
- High energy efficiency
- High transient strength
- Compact design
- Digital control of the primary side (no power-on current surge)
- Digital control of the secondary side
- Controllable output values (U/I/P)
- Analogue and digital interfaces
- Adjustable load parameter characteristic
- Programmable customer specific sequence (e.g. sequential controller)
- Potential-free auxiliary output for sensors
- Auxiliary voltage potential-free (5V/24V)

Examples of possible applications

- Supply of LED clusters (brightness control and current control due to warming of the LEDs)
- Plasma coating
- Control of textile machines
- Electrolysis equipment (e.g. for disinfection)
- Evaporation plants for chemical facilities
- Cement respectively concrete production (e.g. control of the mixing ratio of water to other components)
- Worldwide operation in automation technology

Behaviour of the inrush current

Available standard interfaces

- Analogue (0-10V device dependent 4-20mA)
- RS232 (potential free)

Versions

- Ethernet
- Further on request e.g. USB, CANopen etc.

* further possible versions: 12/15/36/54/69/110 VDC

*¹⁾ input 130-350VDC respectively 400-780VDC

Further characteristics

- No power-on current surge
- Especially high transient strength, very high overload reserves
- Back-up fuse for equipment protection
- Ultra low standby-power (<1Watt)
- Environmentally protected against moisture, dust and corrosive atmospheres through coated modules
- Very high efficiency factor up to 94%
- Factory set adjustable load parameter characteristic
- Use in DC networks

Versions

- A) Basic unit: Digitally regulated primary side
- B) C-Serie: Digital primary and secondary side regulation with display
- C) Special module: IP62, 19-inch, MED etc.

* further possible versions: 12/48 VDC

Further characteristics D-IPS®-BM

- High-tech battery charging and maintenance system for indoor and outdoor applications
- Almost 100% full charging
- Simple switching functions with overcurrent and deep discharge protection
- Intelligent, self-adapting charging procedure
- Exact charging balancing, progressive long-term care, charging efficiency up to 98%
- Exact temperature compensated battery diagnostic procedure
- No „thermal runaway“ through integrated thermal management
- Suitable for VdS applications
- Suitable for lead-acid batteries (standard, AGM, gel, ...)
- Freely configurable via RS232, option: Ethernet or USB
- Environmentally protected against moisture, dust and corrosive atmospheres through coated modules

Further characteristics D-IPS®-BM-EC

- An especially cost effective UPS system
- Microprozessor control, adjustable parameters
- Simple switching functions with overcurrent and deep discharge protection
- Battery charging directly from the connected power supply (D-IPS® or similar)

Note

A temperature sensor is not included in the standard delivery of the battery management system, but rather directly built-in to the external Deutronic battery modules of the D-IPS®-BM-BAT series. If the customer application includes an individual customer battery (i.e. not delivered by Deutronic), an external, active temperature sensor is optionally available from Deutronic.

Further characteristics

- High-tech battery charging and maintenance system for indoor and outdoor applications
- Almost 100% full charging
- High charging performance with empty batteries
- Intelligent, self-adapting charging procedure
- Exact charging balancing, progressive long-term care, charging efficiency up to 98%
- Exact temperature compensated battery diagnostic procedure
- No „thermal runaway“ through integrated thermal management
- Suitable for VdS applications
- Suitable for lead-acid batteries (standard, AGM, gel, ...)
- Freely configurable via RS232, option: Ethernet or USB
- Environmentally protected against moisture, dust and corrosive atmospheres through coated modules

Presented with the E.ON 2009 environmental prize the Deutronic D-IPS® ACS battery charging and diagnostic procedure (ACS = Adaptive Current Step) is an innovative and extremely efficient procedure for UPS systems with lead-based batteries (e.g. standard, AGM, gel, pure lead).

The D-IPS®-BM (UPS battery management system for TS35 DIN rail) integrated temperature compensated ACS procedure enables a charging factor¹⁾ of up to 1,02, i.e. a charging efficiency up to 98% (currently charging factor values about 1,10-1,20 are common). It protects against the so-called thermal “run away” of the battery and offers a very careful battery charging. Furthermore, the D-IPS® ACS procedure extends the life-cycle of the utilized battery and considerably reduces the amount of energy for trickle charging - as opposed to common procedures available. Additional features include the configuration possibility using PC-Tool with state-of-charge and state-of-health report for the battery.

The battery management system offers versions for 12V, 24V and 48V lead-acid batteries as-well-as equipment with integrated AC power supplies (D-IPS®-IBM), which are carried out in established D-IPS® technology power supplies with a digitally controlled input circuitry.

www.deutronic.com

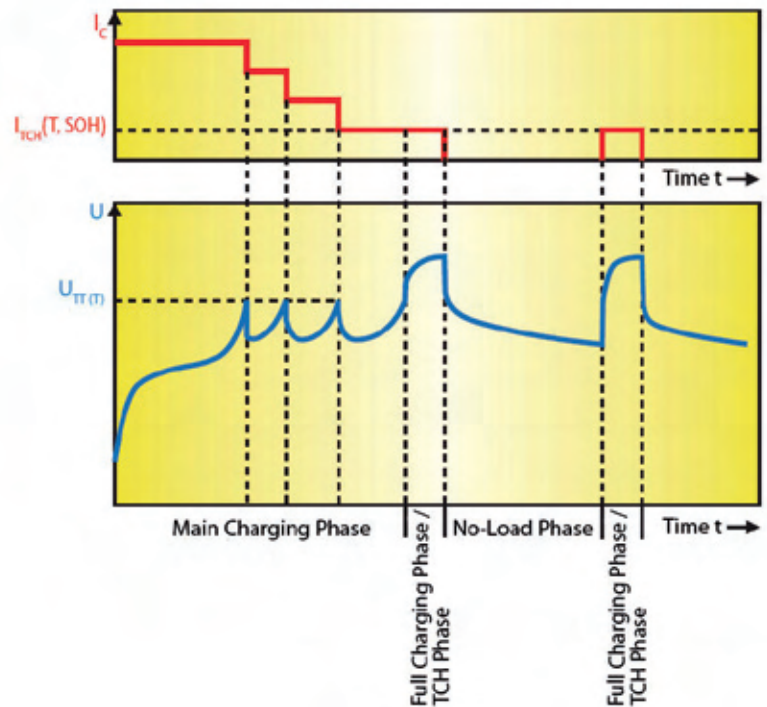

Application and project consulting from our development department.

The D-IPS® ACS Procedure for D-IPS®-BM and D-IPS®-IBM

Main Charging Phase:

- **CONSTANT CURRENT CHARGING:** enables an ideal quick charging of the battery with high charging current and relatively low temperature compensated charging voltage (far below the gassing voltage).
- **ADAPTIVE CURRENT STEP CHARGING PROCEDURE:** Immediately the algorithm detects the onset of secondary reactions in a relevant magnitude, the next constant current charging step is activated.
- According to the ascertained battery parameters the procedure is repeated until the lead-acid battery is nearly charged.

Full Charging Phase / No-Load Phase:

- At the end of the charging process there follows a short FULL CHARGE / TRICKLE CHARGE PHASE (TCH), after this is a change to the NO-LOAD PHASE (OCV = OPEN CIRCUIT VOLTAGE).
- During the no-load phase the lead-acid battery is CONTINUALLY MONITORED. Until recharging occurs, the charge status drops during the no-load phase by a max. 3-5% (charging takes place at the latest after 23 days). The duty factor of the recharging phases is below 1‰, which enables high ENERGY SAVINGS and at the same time REDUCED AGEING.

TECHNICAL NOTE:

With traditional, standard IU procedures nearly all the energy fed into the battery during the trickle charge phase is expended in side reactions (SR) and hence in the ageing of the battery - with simultaneous deficient charging of the battery (explanation - cf. the following description "serial effect").

The D-IPS® ACS Procedure for D-IPS®-BM and D-IPS®-IBM

Serial effect:

- The adjacent diagram shows the trend of the individual cell voltages in a 12V AGM UPS battery. To provide reproducibl conditions for the subsequent charging procedure at the beginning of the recording the battery is DISCHARGED.
- After a short pause, charging is commenced with a CONSTANT CURRENT PHASE and then subsequently transferring into a CONSTANT VOLTAGE PHASE. The charging current is portrayed by the curve in the lower part of the diagram.

TECHNICAL NOTE:

During the CONSTANT CURRENT PHASE (cf. ACS procedure) the cells behave homogeneously. Internal parameter changes have no effect on the terminal voltage of the other individual cells, because the same current is continually flowing through all cells.

- SERIAL EFFECT - the NEGATIVE RESULTS OF CONSTANT VOLTAGE CHARGING become apparent through a considerable divergence of the individual cell voltages as the resulting cell-voltage behaviour shown in the diagram above. During a charging procedure to fully charge a lead-acid battery, the change of any single cell effects all other serially connected cells. During the course of the charging procedure with constant voltage charging, some individual cells develop higher contact voltages, whereas other cells are increasingly less charged and even give-up their charge, so that the contact voltage decreases. The reason for this are inhomogeneities of the cell parameters within the battery (as for example differing internal resistances or SOC= STATE-OF-CHARGE).

TECHNICAL NOTE:

Consequence of CONSTANT VOLTAGE CHARGING is an excessive ageing of the battery because single cells are being overloaded during charging procedure while other cells in the battery receive insufficient charge!

Charging Cycles / Capacity Behaviour:

- The adjacent diagram shows the capacity behaviour of a UPS battery (type: gel, 12V/60Ah) over multiple charging and discharging cycles.
- The D-IPS ACS PROCEDURE HOLDS THE BATTERY CAPACITY STABLE, whereas after only a few charging/discharging cycles the capacity of UPS battery charged with the conventional IU charging procedure will be noticeably reduced due to deficient charging.

* further possible versions: 120 VDC

*¹⁾ further possible versions: 500 VDC

Further characteristics

- Protected against environmental influences (moisture, dust and corrosive atmospheres) through
 - Sealed housing
 - Coated modules
- Analogue and digitally controlled output values
- Extensive protection and self-protection functions (e.g. overvoltage protected, overtemperature protected)
- Efficiency factor up to 94% (type dependent)

With the DXC series Deutronic presents a high-tech and innovative high power power supply generation, which open new possibilities for industrial processes.

Due to the modular system technology the individual modules can be switched together to realise a **user specific** plant concept.

The new and **cost efficient** technology enables the DXC variant the control of output current and voltage (from 0 to nominal value) via separate control signals (0-10VDC, 4-20mA).

The DXC product range is also available as a BUS controlled version. All BUS controlled versions have isolated interfaces via fast opto-couplers with at least 1500V insulation resistance (output - housing).

Example of digital version is e.g. the DX3000/3-CAN-xx.

The control of this version is carried out by an integrated processor board, which apart from its higher performance ability also offers enough memory area for substantial process programs to achieve complex workpiece manipulations.

* further possible versions: 7/28 VDC

*2) Profi battery charger with **D-IPS® ACS technology** (explanation on pages 8 and 9)

Further characteristics of the workshop systems

- Protected against environmental influences (moisture, dust and corrosive atmospheres) through
 - Sealed housing
 - Coated modules
- Operation as battery charger and external power supply
- Extensive protection and self-protection functions
- Indication of operation state via display and high power LEDs
- 100% on board safety, protection of on-board electrical system / airbag
- Low temperature resistant to – 40°C

- **Safe flash-procedure for the DBL700 and DBLW1200**
- **100% on board safety**
- **Option: Version with IP65 protection**

* 480VAC respectively 400-500VAC

Relevant studies show that the market for Lithium batteries is growing with considerably more than 10% per year. However the sensitive Lithium cells require a very exact charging technique matched to the respective cell chemistry and application, whereby conventional battery chargers are not suitable.

For this reason Deutronic has developed a charging computer with 300W for typical boost charging and long-term trickle charging up to single stages with 10kW, cascadable up to 100KW (E-vehicles, energy buffers).

				WxDxH	
Smart charger					
EBL70-12	100-240	14,4	70W	150x60x30mm	116210

Further characteristics EBL 70

- Desulfation mode
- Various setting modes (automobile, motorcycle and low-temperature charging)
- Automatic storage of programmed settings after power failure

Examples of possible applications

- Boats
- Vehicle distribution center
- Oldtimer
- Motorcycles
- Automobiles
- Lawnmowers
- Tractors

Solar module

- Trickle charging of batteries, without external mains supply
- Description: ESM4
- max. 14,3VDC
- max. 255mA
- Item No.:116199

Further characteristics of the solar module

- Power feed over OBD2 plug
Option: battery terminals or cigarette lighter
- Short circuit and return current protection
- Low temperature resistant to – 40°C

* further possible versions: 3,3/±5/7/9/±12/±15/±24/28/ VDC

Further characteristics

- PCB mounting
- Mounting with screw fastening
- Mounting adapter for TS35 DIN rail

- Linear voltage transmission
- DH: Not electrically isolated
- DHP: Electrically isolated
- Low residual ripple

High Voltage Modules (1,5 Watt)

Type	Input VDC	Output VDC							
		500	-500	1000	-1000	2000	-2000	3000	-3000
DH12	12VDC (2-12V)	•	•	•	•	•	•	•	•
DH24	24VDC (2-24V)	•	•	•	•	•	•	•	•

Further characteristics

- Low stray magnetic field
- Protection against high voltage flashover
- Option: Voltage isolation (DHP)

Customer Specific Solutions

**We already have your
special solution in stock!**

**High protection against piracy through individual software e.g.
by modification and special versions of existing units**

**YOUR LOGO
YOUR COLOUR
YOUR SOFTWARE**

**Detailed data sheets can be found under www.deutronic.com.
Application and project consulting from our
development departments.**

- Customer specific programmable software
- Customer specific designations = higher customer security
- Shortened development times through high degree of system integration
- Individual, customer specific special equipment from the corporate group EDWANZ AG. Combine your power electronics + process technology + Software in one unit, we manufacture complete equipment including your electronics.
- Combine the advantages and know-how of serial produced equipment to a custom-made industrial device.
- Use the know-how of the EDWANZ Group.
Our corporate group, including numerous development teams and in-house EMC lab is at your disposal.
- Power supplies, power electronics, process technology, software, design, manufacture of small DC/DC converter up to complete special devices.
- Certifications UL, VDE, TÜV, VDS, PSE, GOST, etc.
- Certification for:
 - Medicine according to EN 60601-1
 - Road traffic according to KBA (E1)
 - Railway applications according to EN 50155, ...
 - Shipping according to Germanischer Lloyd (GL)
 - Military according to VG und MIL

- Accelerates market introduction -

www.deutronic.com

DBL800 IP-MIL Charger for Military Equipment

- Firmware expansion and individual parameterset, to realise the special connection procedure for satellite modems
 - Customer specific design of the output with military plug
- 1200W, 1600W, IP54, IP67
for Li-batteries

DBL300-28 Special Version Customer Specific Charger

- For specially customised charger program control
- Customer specific housing design with specific charger cable (e.g. with an English mains cable)
- Individual cable glands

DBL600-14-Li:
600 Watt charger for LI-batteries with mains and 12VDC input
suitable for model making

D-TOP500-MED Power Supply with Certification

- On request we can develop and manufacture every power supply with MED certification

DXC6000/3-MIL Power Supplies for Mobile Military Radio Systems

- Customised equipment firmware for controlling the connection behaviour and the output voltage
- Extremely low interference level
- EMC suppressed for MIL applications according to VG standard

AC3 - 3 AXIS Flight Attitude Controller for Model Helicopters

- Simulates and replaces the mechanical components typical required on model helicopters (e.g. flybar rod)
- Can also be used in professional applications

DSSE3000/DSSE6000

Static Exciters for Three-Phase AC Generators in Small Power Stations

The operators of small power stations have previously had to cope with typical problems:

- Wear and tear of their exciter
- High losses in the field current circuit
- Contamination in the generator windings caused by dust from carbon brushes
- High maintenance costs
- High repair and maintenance costs
- Procurement of the correct brush types

These often lead to stoppages of the equipment.

For this reason Deutronic has developed the DSSE3000/DSSE6000.

The shaft generator is replaced by an electronic direct current generator with extremely robust MIL components.

Thereby giving the following advantages:

- No stoppage times for maintenance, due to carbon wear and tear
- No carbon dust
- No commutator problems
- No more „collector-Abdrehen“

Voltage and $\cos \varphi$ regulator are easy to realise with standard components. Detailed fault messages are available at the DSSE interface.

More under www.deutronic.com/systemtechnik

Additional System Solutions

- Handling systems for automatic test equipment
- Intelligent conveyor power supplies as well as energy and battery monitoring integrated in conveyor systems for vehicle manufacture
- Recharging stations for vehicles
- Energy filling stations for E vehicles and energy buffering systems
- Control and UPS solutions for wind turbine or hydroelectric plant

www.deutronic.com

Application and project consulting from our development department..

We don't only measure - we also suppress your equipment as a cost-effective service

- EMC - investigations
- CE - conformity tests
- Development associated tests
- EMC - consultancy
- Proposals for suppression solutions

Our own EMC lab provides not only Deutronic Elektronik GmbH itself with fast completion and certification times for its high-tech products. The diversified knowledge and experience at Deutronic for the suppression of electronic circuits gained over many years, is also used by companies from the consumer electronics branch and also by industry as a whole as a service in EMC engineering.

Test possibilities in detail:

- Conducted interference emission
EN55011
- Radiated interference emission
EN55011
- Noise immunity against conducted interference
EN61000-4-4, EN61000-4-5, EN61000-4-6, EN61000-4-11
- Noise immunity against radiated HF fields
EN61000-4-3
- Noise immunity against electrostatic discharges
EN61000-4-2

Deutronic Test Systems

for serial production and qualification tests

- Individual functional and production tests for your equipment and modules according to the standards 2006/42/EG, 2006/95/EG, 2004/108/EG
- Reliable and automatic test sequences
- Minimise test times and production costs
- Freely programmable, mask oriented settings of test programs and inspection sequences
- Information, documentation and archiving in modern SQL databases
- Customised solutions for your application according to your specifications
- Adherence to all current standards and safety regulations

Through the individual configuration of existing basic modules, the creation of a customer specific system using the test system software Vites can be undertaken cost-effectively and in the shortest time.

We develop your test system according to your individual requirements!

Inspection and Test Systems

- Simple and fast programming
- Graphical interface under Windows
- Modern SQL databank
- Information, documentation and archiving of test data and measured values
- Update capabilities - your safe investment for the future
- Inspection data storage and statistic analysis
- Acquisition of partial discharges
- Overvoltage detection on short-circuit
- Acquisition of flashovers
- Remote control via Ethernet
- Evaluation of a PD impulse is adjustable to specific applications according to the standard EN 60270
- Evaluation of the process behaviour using static hypotheses tests
- Clear graphical interface
- Versatile setting possibilities regarding data collection and evaluation
- Calculation of the quality coefficients

www.deutronic.com

Wir entwickeln Ihr Testsystem nach Ihren individuellen Vorgaben!

Customer Specific Test System

Mechanical construction, product specific Measurement and individual software functions are implemented according to customer requirements.

Example of a serial inspection system from our production

Ventilator Test System DTS-MT

Test systems for radial, axial, diagonal and gas blowers

Definable test scope:

- Safety tests (HV test, protective earth conductor test, etc.)
- Functional tests (measurement of voltage, current, frequency, etc.)
- Physical tests (torque, speed, structure-borne noise measurement, etc.)
- Customer specific solutions

Transformer Test System DTS-TR

Test system for electronic goods with windings such as transformers, chokes, mains filters, etc.

Definable test scope:

- Safety tests (HV test, protective earth conductor test, leakage current, etc.)
- Performance tests (measuring the primary and secondary voltages, currents and power)
- Load tests (testing the outputs with different load increments)
- Winding tests (resistive, faults between turns, partial discharge etc.)
- Customer specific solutions

www.deutronic.com

Wir entwickeln Ihr Testsystem nach Ihren individuellen Vorgaben!

Tacho-Generator Test System

Test systems for diverse tacho-generator systems

Definable test scope:

- Functional tests (level measurement, rise and decay time, speed, pulse count, phase shift, etc.)
- Additional functions (communication with the most common encoder interfaces).

Automotive Test System DTS-PS

Test system for onboard chargers, vehicle heaters, etc.

Definable test scope:

- Safety tests
- Performance tests (measurement of voltage, current, power)
- Tests (power factor, phase angle, harmonic waves, ripple/spikes/noise, etc.)
- Functional tests (digital inputs and outputs, load tests, etc.)
- Customer specific solutions
- CAN bus
- K bus

Safety System DTS-ST

Test systems for all electronic components.

Definable test scope:

- Safety tests (HV test, protective conductor test, isolation test, leakage current test, etc.)
- Functional tests (digitale input and outputs, analogue inputs and outputs, etc.)
- Customer specific solutions

Turntable System DTS-DT

For complex, contact protected test processes in the production. Available as a two or more cell system. By using turntables, new test pieces can be placed on the system and connected while the testing of others is in progress.

Power Supply Test System DTS-PS

Test systems for electronic control and communication equipment.

Definable test scope:

- Functional tests (digital inputs and outputs, electronic loads, analogue inputs and outputs, etc.)
- Communication test (CAN, RS232, IEEE, Ethernet etc.)
- Customer specific solutions

Motor Test System DTS-MT for Servo Motors

Test systems for AC and DC servo motors

Definable test scope:

- Safety tests (HV test, protective earth conductor test, etc.)
- Performance tests (measurement of voltage, current, power)
- Physical tests (KE and EMF test, speed and direction measurement structure-borne noise measurement, etc.)
- Functional tests (tacho-generator signals, parameter control, etc.)
- Customer specific solutions

www.deutronic.com

Wir entwickeln Ihr Testsystem nach Ihren individuellen Vorgaben!

Functional Test System DTS-FT for Equipment with Windings

Test systems for special equipment with windings such as input filters, high voltage chokes, welding transformers, etc.

Definable test scope:

- Functional tests (inductivity, resistance, surge voltage, spectrum analysis, partial discharge safety test, etc.)

Test system DTS-FT for Proximity Sensors

Test systems for capacitive, inductive and magnetic proximity sensors.

Definable test scope:

- Functional tests (switching behaviour dependant on the sensing gap, power consumption, control and evaluation of digital signals, control of status displays such as LEDs)

Stator Test System

Test systems for stators and rotors from motor manufacturing.

Definable test scope:

- Functional tests (partial discharge, faults between turns, resistance, high voltage, etc.)

Customer Specific Complete Solutions - one-stop shopping!

- Certification to DIN EN ISO 9001:2000 and DIN EN ISO 13485:2003 (medical tech.)
- Production with high vertical range of manufacture and most modern equipment e.g. 4kW laser for sheet metal processing up to 25 mm, high speed punch machine, welding robot, CNC bending machine, paint shop, ...)
- Cost-effective serial production
- ESD safe module production
- Diverse IEC/UL certification
- CL2 welding certification to DIN EN 15085-2 and DIN EN 1418

Project Management

Mechanical modules and spare parts (serial production)

Medical isolation transformers

Toroidal core transformers and modules, i.e. for medical technology

Power supply modules for industry and medical

Racks, cabinets, module racks, fibre-optic connector and distribution technology (Telekom)

Terminals and display housings to customer specification

Automats to customer
