

MiCS-5914 with recommended supply circuit (top view)

R1 is typically a E96 resistor at 93.1 Ω . This resistor is necessary to obtain the right temperature on the heater while using a single 5V power supply. The resulting voltage is typically $V_H = 2.2V$.

The voltage measured on the load resistor is directly linked to the resistance of the sensor respectively. RLOAD must be 820 Ω at the lowest in order not to damage the sensitive layer.

Sensor configuration

The silicon gas sensor structure consists of an accurately micro machined diaphragm with an embedded heating resistor and the sensing layer on top.

The internal connections are shown above.
