

VALU-BEAM – 915 Series

Infrared, 880 nm

These sensors detect the reflection of their own light from the object being sensed, and so require no special reflectors. They are ideal for applications where the reflectivity and profile of the object are sufficient to return a large portion of the emitted light back to the sensor. Choose DSR models for best response to objects at close range.

Due to their narrow depth of field, these sensors excel at detecting small objects only a fraction of an inch in front of their backgrounds. The precise 0.06" dia. sensing spot focuses 1.5" in front of the sensor lens. The visible red beam simplifies alignment.

*NOTES:

- 9 m (30') cables are available by adding suffix "W/30" to the model number of any cabled sensor (e.g. SMW915CV W/30).
- A model with a QD connector requires an accessory mating cable. See page 8 for more information.

VALU-BEAM – 915 Series

An excellent option where sensing must be accomplished in tight, inaccessible or volatile areas. Withstands vibration and shock; immune to electrical noise. Glass fibers withstand high temperatures, extreme moisture and corrosive materials. Not recommended for applications requiring bending or repeated flexing of fibers.

Compatible with most Banner plastic fiber optic assemblies. Excellent option for sensing in tight, inaccessible or volatile areas. Withstands vibration and shock; immune to electrical noise. Functions well at temperatures between -30° and +70°C (-20° and +158°F), withstands repeated flexing. Most are easy to shorten in the field. Not recommended for severe environments.
