

The MiCS-4514 is a compact MOS sensor with two fully independent sensing elements on one package.

The MiCS-4514 is a robust MEMS sensor for the detection of pollution from automobile exhausts.

Features

- Smallest footprint for compact designs (5 x 7 x 1.55 mm)
- Robust MEMS sensor for harsh environments
- High-volume manufacturing for low-cost applications
- Short lead-times

RED sensor, continuous power ON, 25°C, 50% RH

Detectable gases

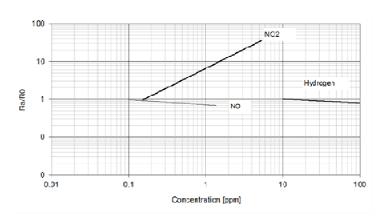

• Carbon monoxide CO 1 – 1000ppm • Nitrogen dioxide 0.05 - 10ppm NO_2 C₂H₅OH Ethanol 10 – 500ppm Hydrogen 1 - 1000ppm • Ammonia 1 – 500ppm NΗ₃ Methane >1000ppm CH_{4}

OX sensor, continuous power ON, 25°C, 50% RH

Performance RED sensor

| Characteristic RED sensor | Symbol | Тур | Min | Max | Unit |
|--|-----------------|-----|-----|------|------|
| Sensing resistance in air (see note 1) | R ₀ | - | 100 | 1500 | kΩ |
| Typical CO detection range | FS | | 1 | 1000 | ppm |
| Sensitivity factor (see note 2) | S ₆₀ | - | 1.2 | 50 | - |

Performance OX sensor

| Characteristic OX sensor | Symbol | Тур | Min | Max | Unit |
|---|----------------|-----|------|-----|------|
| Sensing resistance in air (see note 1) | R ₀ | - | 0.8 | 20 | kΩ |
| Typical NO ₂ detection range | FS | | 0.05 | 10 | ppm |
| Sensitivity factor (see note 3) | S _R | - | 2 | - | - |

Notes:

- 1. Sensing resistance in air R_0 is measured under controlled ambient conditions, i.e. synthetic air at 23 $\pm 5^{\circ}$ C and 50 \pm 10% RH for RED sensor and synthetic air at 23 $\pm 5^{\circ}$ C and \leq 5% RH for OX sensor. Sampling test.
- 2. Sensitivity factor is defined as Rs in air divided by Rs at 60 ppm CO. Test conditions are $23 \pm 5^{\circ}$ C and $50 \pm 10\%$ RH. Indicative values only. Sampling test.
- 3. Sensitivity factor is defined as Rs at 0.25 ppm NO_2 , divided by Rs in air. Test conditions are 23 ± 5°C and \leq 5% RH . Indicative values only. Sampling test.

IMPORTANT PRECAUTIONS:

Read the following instructions carefully before using the MiCS-4514 described here to avoid erroneous readings and to prevent the device from permanent damage.

- The sensor must be reflow soldered in a neutral atmosphere, without soldering flux vapours.
- The sensor must not be exposed to high concentrations of organic solvents, silicone vapours or cigarette-smoke in order to avoid poisoning the sensitive layer.
- Heater voltage above the specified maximum rating will destroy the sensor due to overheating.
- This sensor is to be placed in a filtered package that protects it against water and dust projections.
- SGX sensortech strongly recommends using ESD protection equipment to handle the sensor.
