PULS - The Market Leader

Reliability and Sustainability from the Market Leader!

For over 30 years, PULS has been dedicated to providing the best in quality, technology, application support, and customer service available to the industrial Din-Rail power supply market. This singular focus on the DC Power Market's requirements and needs has resulted in PULS obtaining a market leadership position in this demanding industry.

The heart of your control system is your power supply. With PULS you can be assured that you are obtaining a product that is a leader in efficiency with the longest life and reliability. The PULS philosophy, of not obsoleting older designs, saves you money and time by eliminating the need to re-engineer your product when a vendor launches a new product generation and forces you to change.

PULS unique bonus power and power boost assures you of power being available when you need it and eliminates the need for oversizing, resulting in higher component costs and wasted energy.

PULS highly efficient products contribute to a longer life of all electronic components in your application, by lowering the internal temperature in your control cabinet. Our small footprint and lower heat losses often result in a smaller enclosure

In the last several years, PULS has opened the two most modern and highly "Sustainable" manufacturing plants in this industry. Our newest facility has obtained the status of Leed Gold Certification. This assures that PULS users are purchasing the most energy efficient products in the world, produced in a highly efficient facility. The PULS dedication to "Sustainability" has many advantages for you.

In North America, we stock every product listed in this selection guide and welcome your calls to our Customer Support and Application Engineering Team.

The products listed in this selection guide are only a small offering of our extensive product range. Visit our web site at www.pulspower.us for detailed comprehensive information on all our products.

We appreciate your business and look forward to continuing to offer you the best in product, support and service.

PULS Support is Available

Contact our Application or Customer Service Team for availability and other questions you might have at (630) 587-9780 or info@puls-us.com.

Visit Us at www.pulspower.us

Many suggestions and requirements from customers have been included in our newly revised web site – now featuring an array of additional information, documents and data files. This makes using PULS even easier. For many of our units you can find the following information:

- The most important features and parameters of individual devices
- Mechanical dimensions
- Functional diagrams
- Output characteristic curves
- CE Declaration of Conformity
- Related products
- Suitable accessories for individual devices
- E-Plan macros
- 2-D CAD design data file formats (.dxf and .dwg files)
- 3-D CAD design data file formats (.stp and .dwt files)
- 3-D formats can be displayed on most PCs using free viewer software from Autodesk®.
- Many various approval certificates and approval reports
- Links to corresponding UL and other agency sites where our products are listed
- Find your North American local representative

The PULS Advantage

CDS Series
Clean Regulated DC Voltage When None is Available

The PULS CDS Series - DCDC Converter

Switch-mode DC power supplies have excellent regulation on the output and are mostly unaffected by most conditions. However, the output voltage of a supply can be affected by factors such as wire length, wire size and electronic noise. Because certain applications are large, long wire lengths are a reality and are required to connect all the control equipment together. Couple this along with a small wire size and the DC voltage will not be substantially affected by the load. Even if the wire size is appropriate for the load peak currents such as starting motors can further aggravate the voltage loss.

applications in remote sites where DC is the only available voltage and the source could be a battery, solar panel or DC but there is a real problem in addition to the voltage drop that will occur in these remote locations because of the wire length, wire size and current draw, the DC voltage can also be made "dirty" by the electrical noise introduced into the wires by the surrounding equipment. Safety along with cost and efficiency, PULS has made it a reality. The best of supplying AC to a remote site can be very expensive if only DC is required.

DCDC Converters
The conditions of voltage drop and "dirty" DC voltage in large or remote applications can be rectified by installing a DCDC converter. Simply put, a DCDC converter will take a DC input voltage, filter it and then produce a regulated output voltage. While some units will operate in DC voltage, most DCDC converters operate in a wide input range. Some converters take a compromised 240VAC voltage, clean it up and produce a regulated 24VDC. Other models can step up or step down the DC voltage. However, most DCDC converters are manufactured the same and do not work perfectly in the same manner.

Voltage Drop
It might be hard to understand just how much voltage is lost on a long

Remove Applications
There are also DC only control

"The PULS Advantage"
White Papers

PULS North American Headquarters in St. Charles, IL

A new datasheet archive has also been added for old and obsolete products such as the AP and DP units.

It always pays to visit www.pulspower.us. This can make your work much simpler and save lots of time.

The screenshot shows the PULS North America website interface. At the top, there is a navigation bar with "North America", "Home | Contact | Login | Download | Stamp | Print". Below the navigation bar is a large banner image of a landscape. Underneath the banner are several menu items: "ABOUT PULS", "PRODUCTS", "PRESS CENTER", "TECHNOLOGY", and "QUALITY". The main content area features a "PULS North America" section with a sub-header "Superior Products, Application/Engineering Assistance and Customer Service". Below this, there is a paragraph of text describing the company's history and services. To the right of the text is a small image of the PULS facility in St. Charles, Illinois. At the bottom of the page, there is a "Call our application team at" section with the phone number (630) 587-9780 and an email address info@puls-us.com. There are also several buttons for "U.S. Application/Engineering Assistance", "U.S. Price List", and "Catalog 2006-2010".

Sustainability & Reliability in Everything We Do

Sustainability is a state where development “meets the needs of the present without compromising the ability of future generations to meet their own needs”. Sustainability is meant to ensure that prosperity is achieved without sacrificing the resources and assets of future generations. It requires an integrated focus on the core values of social equity, economic prosperity and environmental integrity. The emphasis on balance between the three core areas is also referred to as the “triple bottom line” and is a recognized pathway to long-term community success.

[PULS 3 Circles of Sustainability]

ENVIRONMENTAL

- Green, Efficient Products
- Highly Efficient and Green Certified Supply Chain
- Lightest and Smallest Products Resulting in Lower Shipment Costs and Smaller Enclosures

SOCIAL

- Leader in Market Education
- Provider of Detailed and Guaranteed Technical Information
- 30+ Years of Community Involvement

ECONOMIC

- Lowest Energy Consumption
- Less Heat Adds to Life of All Components in Control System
- Longest Life
- Lowest Total Cost of Ownership

PULS Green Award Winning Plant in Czech Republic

“PULS is a global leader, not only in the products we build, but in how we build our products.”

PULS Green Award Winning Plant in China

DIMENSION

10 Reasons for Choosing PULS

EFFICIENCY

- Highest energy efficiency in the market
- Less heat generated in the enclosure allows a longer lifetime for all components in the system
- Least energy consumption for the user

BROAD PRODUCT RANGE

- AC Single, 3-Phase & DC Input power supplies
- DC to DC power converters
- Specific Network power supplies
- Redundancy Modules & Redundant Power Supplies
- DC-UPS Controllers with individual battery monitoring and charging

CONTROL OF SUPPLY CHAIN & MANUFACTURING

- From development to shipment the entire process is controlled by PULS
- Two ultra modern manufacturing facilities built and opened in last 5 years
- Delivery to your requirements

DEVELOPMENT ENGINEERING RESOURCES

- PULS employs over 50 engineers and technicians exclusively dedicated to developing DC power products for your application
- Modified standard products available for volume applications

LONG LIFE OF PRODUCT FAMILIES

- Continually introducing the next generation of DC power solutions while maintaining existing designs
- PULS does not phase out or obsolete standard products
- Eliminates the forced changes in your design due to obsolescence
- Availability you can count on for years

The Right Product for YOUR Application

THE DC POWER SPECIALIST

- DC power products are our only business
- Market education and training leader
- Data sheets that you can rely on to meet the stated performance

LOWEST TOTAL COST OF OWNERSHIP

- Small footprints result in smaller cabinet requirements
- Lower heat generation also leads to smaller cabinets
- Long life – prolongs the replacement costs
- Less energy consumed to do the same job

QUALITY & LIFE TIME

- Longest life in the industry
- Quality is assured with every product
- Performance to data sheets is guaranteed

TECHNOLOGY LEADER

- Advanced design techniques utilized to lead the market in new product innovations
- Recognized by Frost & Sullivan as the Technology Leader

CUSTOMER SERVICE & APPLICATION ASSISTANCE

- Application engineering support available to assist you with the best product for your application
- Highly trained sales reps available to assist you with your application
- Friendly and responsive customer service team available to assist you with your availability and delivery questions

SilverLine

The classic power supply family for general applications which have been proven over a million times and has been continuously available since the mid 1990's.

- Single or 3-Phase Input
- Redundant Power Supplies
- AS-Interface® Power Supplies
- Redundancy Modules

MiniLine

The MiniLine series covers the lower power requirements in the range from 15W to 100W. The units in their rugged plastic housing are highly efficient, compact, can be installed in seconds and are extremely reliable. In addition to the standard 24V power supplies, many other output voltages are also available.

- 100-240 or 380-480V Input
- Output Voltages from 5V to 56V
- Robust Plastic Housing
- Spring Clamp Terminals on Standard Models and Screw Terminals on the Compact Units
- Wide Temperature Range from -10°C to +70°C and Select Models Down to -40°C
- Redundancy Modules

		1-Phase Supplies	3-Phase Supplies	DC/DC Converters	DC-UPS	Buffer Modules	Redundancy Modules
MiniLine		15-100W	90-100W	-	-	-	10A
SilverLine		40-240W	120-960W	40W	-	24V	2.5-40A
Dimension	C-Series	80-240W	96-240W	92-120W	-	-	-
	Q-Series	80-960W	480-960W	480W	-	-	-
	X-Series	-	960W	-	-	-	-
	U-Series	-	-	-	10A	24V, 48V	-
	Y-Series	-	-	-	-	-	20-80A

Dimension

Dimension offers you everything from basic units with only essential functions to premium products for more demanding applications. Other Dimension products include DC/DC converters, buffer modules, DC-UPS's and a large assortment of accessories. Due to the wide variety of options, you only pay for the features you need.

C - Series Power Supplies and DC/DC Converters

For users looking for highly reliable power supplies in a compact housing which are easy to use. Focusing only on the essentials, achieves significant price advantages.

- 20% Current Reserves
- Low Inrush Current Surge
- Large Screw Terminals

Q - Series Premium Class Power Supplies

Suitable when you need state-of-the-art technology and flexibility for demanding tasks. With outstanding efficiencies, 50% BonusPower® and many other features, this series is the "Best in Class".

- 50% Current Reserves
- AC and DC Input
- Low Inrush Current Surge
- DC-OK Relay Contact (Except QS3)
- Excellent Power Factor
- Active Power Factor Correction (PFC)
- Active Filter against Input Transients
- Spring Clamp Terminals (Except 40A)
- Extensive Approval Package

U - Series Buffer Modules & DC-UPS

Back-up systems for minutes with a DC-UPS needing only one 12V-battery or for seconds with our battery-free buffer module. This improves safety and prevents downtime, loss of data and long restart sequences.

X - Series 3-Phase Power Supplies for Power Applications

For motors and other power-hungry loads. Small size, maximum efficiency and low price are the benefits with only minor compromises in a few features.

- 25% Current Reserves
- No Inrush Current Surge
- Efficiencies up to 96%

Y - Series Redundancy Modules

For building redundant power supply systems or to isolate sensitive circuits.

- Redundancy Modules with Alarm Contacts
- Redundancy Modules without Alarm Contacts

Z - Series Mounting Accessories

For installation in low profile cabinets or for panel installations where no DIN-rail is available.

Single Phase Plastic Housing Power Supplies

MiniLine
ML100.100

- Excellent Efficiency
- Spring Clamp Terminals
- Robust Design
- Operational Temperature -10° to + 70°C
- MTBF over 4,000,000 hours

Compact MiniLine
ML30.241

- Excellent Efficiency
- Large Screw Terminals
- Robust Design
- Operational Temperature:
 - 10° to + 70°C – Standard
 - 40° to + 70°C – Select Models
- MTBF over 7,000,000 hours

1 - For higher wattage applications, paralleling of power supplies is possible. PULS recommends using units that are "Parallel Capable" for parallel applications.

2 - See data sheet for input voltage tolerances.

3 - For input, these units utilize only two of the three legs of a 3-Phase system.

4 - Manual select input voltage.

5 - Wide-range input voltage.

6 - Auto-select input voltage.

7 - Most common catalog numbers - See pages 22 and 23 for complete listing.

8 - Available late 2011 or early 2012.

3-Phase Power Supplies

Dimension Q-Series
QT40.241

- Industry's Smallest Footprint
- Efficiency over 95%
- Screw Terminals – Some with Spring Clamps
- Up to 50% Current Reserves
- Operational Temperature -25° to +70°C
- MTBF over 2,00,000 hours
- Very Low AC Inrush

Dimension X-Series
XT40.242

- Unique Supply for Power Applications
- Efficiency up to 96%
- Screw Terminals
- 25% Current Reserves
- Operational Temperature -25° to +70°C
- MTBF over 950,000 hours
- No AC Inrush

Classic SilverLine
SL20.310

- Long Standing Usage in the Industry
- Efficiency up to 90%
- Screw Terminals
- 20% Current Reserves
- Operational Temperature -10° to +70°C
- MTBF over 2,100,000 hours

3-Phase Power Supplies

1 - For higher wattage applications, paralleling of power supplies is possible. PULS recommends using units that are "Parallel Capable" for parallel applications.

2 - See data sheet for input (or output) voltage tolerances.

3 - Most common catalog numbers - See pages 22 and 23 for complete listing.

4 - For input, these units utilize only two of the three legs of a 3-Phase system.

5 - Input voltage is manually selectable.

Redundancy Modules & Power Supplies

MiniLine Redundancy Module
MLY02.100

Dimension Redundancy Module
YR80.241

Dimension Redundancy Module with Signaling
YRM2.DIODE

Classic SilverLine Redundancy Supply
SLR5.100

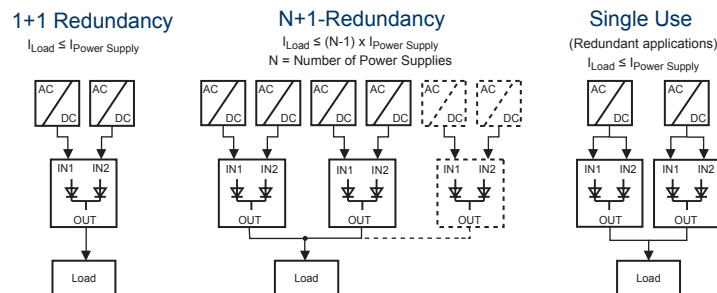

- Dual Input with Single Output
- Perfect for Redundancy
- Screw Terminals – Some with Spring Clamps
- De-Coupling Diodes – Specific units with MOSFETs
- Operational Temperature -40° to +70°C
- MTBF over 45,000,000 hours

- True Redundant Power Supply
- Efficiency up to 89%
- De-Coupling Diode Built In
- Relay Signal
- 20% Current Reserves
- Plug Screw Terminals
- Operational Temperature -10°to + 70°C
- MTBF over 2,000,000 hours

24V Protection Modules

PISA11
PISA11.401

This protection module fulfills two basic functions. First, it distributes the current of a large power source to four lower current output channels, allowing for smaller wires to be used. The second function is to permit only so much current on the outputs that the input voltage of this unit (which corresponds to the output voltage of the power supply) does not fall below 21V. This ensures a reliable supply voltage for sensitive equipment, such as PLCs, controls or sensors, when they are connected directly to the same power supply as the PISA protection module.

The protection module has one 24V input and four output channels, to which the current is distributed. Each output channel is equipped with a redundant electronic over-current protection, which prevents overloads. All four output channels will shutdown simultaneously if the current of one individual channel or the maximum allowed current for the protection module is exceeded.

A safeguard circuit in the input stage of the PISA module works like a valve. It permits only so much current that the input voltage does not drop below 21V. In case the input voltage would fall below this value (due to overloads, too small of a power supply or high inrush currents) all four output channels will be actively current limited and will shutdown after a certain period of time.

DC-UPS

Typical Wiring Scheme of a PULS DC-UPS

DC-UPS Advantages

- Requires only one 12V-battery to buffer 24V loads
- Easy battery replacement, no matched batteries required
- Stabilized output voltage in buffer mode
- No dips of the DC voltage during transition from normal to buffer mode
- Superior battery management for longest battery service life
- Output is decoupled from the input to separate load circuits into buffered and non buffered sections
- Electronically overload protected
- Reverse polarity protection for battery input
- Smart diagnostics and monitoring functions
- “Replace Battery” signal included
- Selectable buffer time limiter

Achievable Battery Times

Buffer Modules

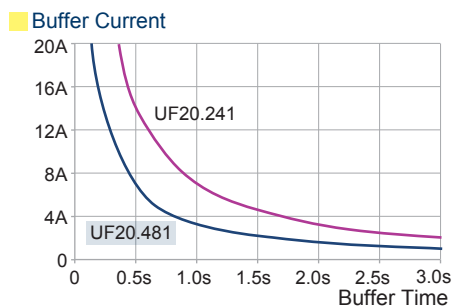

Typical Wiring Scheme for PULS Buffer Modules

Buffer Module Advantages

- Energy storage with electrolytic capacitors
- No service needed for the entire life span
- Can be used up to +70°C
- Stabilized output voltage in buffer mode
- No dips of the DC voltage during transition from normal to buffer mode
- Multiple units can be used in parallel to gain a longer buffer time or to increase the buffer current
- Selectable back-up behavior
- LED and transistor outputs to report the status of the unit
- “Inhibit” input to disable buffering

Energy is Stored in the Capacitors and Released to the DC Bus when Needed.

Achievable Buffer Times

Mounting Kits

ZM1.UBC10

Designed for Direct Panel or Wall Mounting of the UBC10.241

Parallel & Series Connections

Paralleling to Increase Output Power

Paralleling allows flexibility and modularity to many applications. This approach allows readily available solutions using standard stock items without the need of looking for a custom model. Paralleling also allows future expansion without the need of replacing the original unit. Information as to which units can be paralleled for increased power can be found in this Selection Guide.

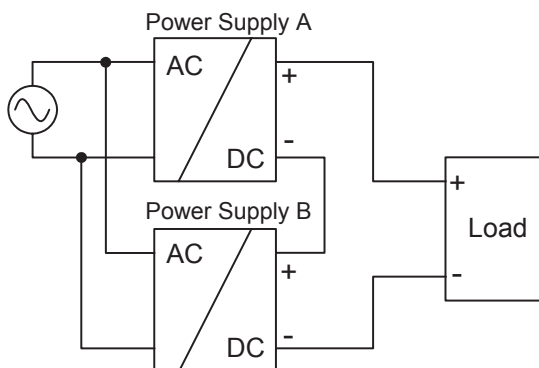

Parallel Connection to Increase the Output Power

Guidelines for Paralleling Supplies

- Only use power supplies in the same family
- Connect as many units in parallel as needed
- A fuse, breaker or redundancy module on the output is only required if more than three units are connected in parallel
- Adjust the output voltage of each supply to the same level
- Keep a side clearance between supplies of at least 15mm
- Do not mount power supplies above each other
- Use standard mounting orientation
- Leakage current, EMI, inrush current and harmonics will increase when connecting units in parallel

Series Connection to Increase Output Voltage

As with paralleling, a series connection allows flexibility and modularity to many applications. This approach allows readily available solutions using standard stock items without the need of looking for a custom model with a unique output voltage. Many PULS power supplies can be connected in series to increase the output voltage. Please check the data sheet to confirm which units can be put in series.

Series Connection to Increase the Output Voltage

Guidelines for Series Connections

- Only use identical power supplies
- Connect as many units in series as needed, as long as the output voltage does not exceed 150VDC
- Voltages with a potential above 60VDC are no longer SELV and can be hazardous. Install suitable protection for accidental contact
- Grounding of the output is required when the sum of the output voltage is above 60VDC
- Avoid return voltages such as from decelerating motors or batteries from being applied to the output terminals
- Keep a side clearance between supplies of at least 15mm
- Do not mount power supplies above each other
- Use standard mounting orientation
- Leakage current, EMI, inrush current and harmonics will increase when connecting units in series
