Tadiran Lithium Batteries

Product Data Catalogue

TADIRAN BATTERIES

Customized battery packs
The design and assembly of battery packs require special skills, expertise and experience. Therefore it is not recommended that the end user attempt to self-assemble battery packs. It is preferable that any battery using lithium cells be fabricated by Tadiran to ensure proper battery design and construction (see figure 1). A full battery assembly service is available from Tadiran who can be contacted for further information. If for any reason, this is not possible, Tadiran can review the pack design in confidence to ensure that the design is safe (in assembly and use) and capable of meeting stated performance requirements.

Figure 1: *Upon request, Tadiran designs, tests, and manufactures customized battery packs.*
