General

The MAGELiS operator terminals come with the following features:

- Alphanumeric LCD or fluorescent displays
- 5- or 10-inch size
- Graphical matrix display
- Monochrome or color screen
- Touch sensitive types
- Configuration software based on the Microsoft® Windows programming environment
- All terminals are programmable using the same software package and the same configuration procedure
- Graphics terminals use a symbols library that allows the programmer to develop customized, animated screens
- Many different protocols are supported that allow communication with a wide variety of programmable controllers

NOTE: A bullet (•) in the catalog number denotes a character that can vary.

| Terminals	Display Units with Alphanumeric Screen	Terminals with Alphanumeric Screen		Display Units with Matrix Screen

MAGELiS® Operator Terminals
Product Description

Architectures, connections to control systems

MAGELiS operator dialogue terminals communicate with control system equipment:

- Via serial link
- Via fieldbus
- In network architectures

Point-to-point or multidrop connection with the PLC via serial link

All terminals incorporate an RS 232 C, RS 422/485 asynchronous serial link as standard.

The use of a UNI-TELWAY, MODBUS, or KS protocol means that communication can be set up easily with Schneider Electric PLCs: TSX, MODICON®, April, or A-Line.

Third-party protocols provide connection to PLCs offered by the main market suppliers:

- DF1, DH485 for Allen Bradley PLC5/SLC500 PLCs
- SNPX for General Electric Series 90 PLCs
- Sysway for Omron C200 PLCs
- AS511/3964R, MPI/PPI for Siemens Simatic S5/S7 PLCs

Connection to PLCs via fieldbus
The addition of a Type III PCMCIA communication card to XBTF terminals with graphic screen enables connection to various industrial networks:

- FIPIO
- MODBUS Plus

XBTF terminals with a graphic screen use the bus master PLC to provide operator dialogue and interactive control of various devices connected on the bus.

Several terminals with a graphic screen can be connected on the same bus.

Connection to network architectures

The addition of a Type III PCMCIA communication card to XBTF terminals
with a graphic screen means that they can be integrated into single or
multiple network architectures:

- FIPWAY network
- MODBUS Plus network

MAGELiS® Operator Terminals
XBTH/P/E/HM/PM Display Units and Terminals

General

Presentation	 XBTH, XBTP, XBTE, XBTHM, XBTPM	XBTH/P/E display units and terminals with alphanumeric screen are used to represent messages and variables. Various keys can be used to modify variables, control the device, or browse in a dialogue application. XBTHM/PM terminals with matrix screen can also be used to display bitmap images and animated bar chart and gauge objects.
Operation		All the MAGELiS display units and terminals with alphanumeric and matrix screens have the same user interface: function keys, service keys, and numeric or alphanumeric keys.
Configuration		MAGELiS display units and terminals can be configured using the same XBTL100• software in a Windows environment. For terminals with an alphanumeric screen, XBTL100• software employs pages. Each page can be viewed in its entirety. Selecting a line of text shows what will appear on the product screen (two to four lines, depending on the model). For XBTHM terminals with a matrix screen, XBTL100• software offers up to 8 lines of 40 characters, and animated bar chart and gauge objects.
Communication	 XBTH, PLC	XBTH/P/E/HM/PM terminals communicate with PLCs via an integrated point-to-point or multidrop serial link. The communication protocols used are those of Schneider PLCs as well as those of the other main market suppliers.

Functions

Depending on the model, XBTH/P/E/HM/PM display units and terminals have function keys and service keys on the front panel.

Function Keys

Function keys are defined for the whole application. They can be used for accessing a page, pulse control, and toggle set/reset.

Service Keys

Service keys are the arrow keys and the control keys combined. Service keys are used to modify the parameters of the control system.

The control keys are used to perform the following actions:

ENTER   Confirm a selection or entry, acknowledge an alarm

MOD   Change to the mode for entering pages, passwords, fields, or graphic objects

ESC   Cancel an entry, suspend or stop a current action

SHIFT   Access the second of the dual key functions

MENU   Access a menu containing the operating functions

HOME   Return to the entry point of the current menu
Example: return to the first page of the application

SYST   Access the confidential mode, which contains the implementation functions

ALARM   View the alarms

PRINT   Print
The arrow keys are used to:

- Change page within a menu
- Move within a page
- Select the value of a digit
- Select a value from a list of choices
- When used with the **SHIFT** key, increment or decrement the value of a variable field

Description

XBTH/P/E/HM/PM display units and terminals include:

On the front panel:

1.   A communication monitoring indicator lamp

2.   A keypad activity indicator lamp (dependent on the model)

3.   Fluorescent or LCD back-lit display

4.   Function keys with indicator lamp and reusable labels

5.   Service keys with indicator lamp

6.   Twelve numeric keys (for XBTP02••••)
Twelve alphanumeric keys [0 to 9, (+/–), (.)] associated with three alphabetical access keys (A to Z) for XBTE

On the rear:

1.   A plug-in terminal block for 24 Vdc power supply and a connection for the alarm relay (dependent on the model)

2.   A female 25-pin SUB-D connector for connection to PLCs, FTX configuration terminals, or PC compatibles

3.   A male 9-pin SUB-D connector for the printer connection (dependent on the model)

MAGELiS® Operator Terminals
XBTF Terminals with Graphic Screen

General

Presentation	XBTF01/F03 XBTF02/F03 XBTFC02/F04 XBTFC06/F08	Graphic screen operator dialogue terminals are available with 5 or 10 in. (127 or 254 mm) screens, in monochrome or color, with a keypad or a touch-sensitive screen. XBTF graphic screen terminals are specially designed for operator dialogue graphic functions.
Operation		All MAGELiS graphic screen terminals have the same user interface: static and dynamic function keys, service keys, alphanumeric keys.
Configuration	Module de sertissage Phase: Piece: 999 Temp 1 Temp 2 Saisie Phase: 999 Saisie Module: 99999 Saisie Pression:999 Retour	MAGELiS graphic screen terminals can be configured using the same XBTL100• software in a Windows environment. XBTL100• software provides graphic screen terminals with a library of animated graphic objects such as bargraphs, volume indicator meters, selectors, potentiometers, and trending curves. The variable for animating an object can be selected directly from a list of symbols given by the PL7 or CONCEPT™ software. The application program for the graphic terminals is stored on a PCMCIA memory card.
Communication	XBTF PLC PLC	XBTF graphic screen terminals communicate with PLCs via an integrated point-to-point or multidrop serial link, or via a field bus with a PCMCIA Type III card. The communication protocols are those used by Schneider Electric PLCs as well as those of the other main market suppliers.

Functions

XBTF graphic screen operator dialogue terminals have the following functions:

- Displaying animated synoptic screens, control, modification of numeric and alphanumeric variables
- Displaying a service line (status and alarm bar) with the current time
- Dynamic visualization of operating data (setpoints, measurements, recipes, maintenance messages) and process errors
- Control via dynamic or static function keys
- Scaling analog variables
- Real-time and trending curves
- Alarm log and managing alarm groups
- Managing help pages, form pages, recipe pages
- Pages called by the user or by the PLC
- Three levels of passwords
- Printing form pages, date-stamped log and alarms
- Communication protocol application support in the PCMCIA Type II application memory card

The role of the function keys is defined using the XBTL100• software. Modifications cannot be made during operation. Each function key can be associated with an internal bit of the PLC application.

Static Function Keys (F•)

Static function keys are defined for the whole application.

They perform the following actions:

- Accessing a page
- Pulse control
- Toggle set/reset control

Static keys can be marked with reusable labels.

Dynamic function keys and touch-sensitive keys

Dynamic function keys and touch-sensitive keys are associated with a page. Their role can therefore differ from one page to another.

They perform the following actions:

- Accessing a page
- Latching memory bits
- Toggling memory bits (on/off)
- Accessing the modification of a value
- Direct writing

Each dynamic key and touch-sensitive key can be assigned a label or icon illustrating its function.

On touch-sensitive terminals, the touch-sensitive zones function in a similar way to the dynamic keys on keypad terminals.

Service Keys

Service keys are the arrow keys and the control keys combined. Service keys are used to modify the parameters of the control system.

The control keys perform the following actions:

ENTER	Confirm a selection or entry, acknowledge an alarm
MOD	Change to the mode for entering pages, passwords, fields, or graphic objects
ESC	Cancel an entry, suspend or stop a current action; display previous pages in succession; quit the alarm display
SHIFT	Access the second of the dual key functions
MENU	Access a menu containing the operating functions that do not have direct access keys
HOME	Return to the entry point of the current menu Example: return to the first page of the application
SYST	Access the confidential mode that contains the password-protected implementation functions
ALARM	View the alarms
PRINT	Print

The arrow keys perform the following actions:

- Change the page within a menu
- Change fields on a page
- Select an object on a page
- Move within a page
- Select the value of a digit
- Select a value from a list of choices
- When used with the **SHIFT** key, increment or decrement the value of a variable field
XBTF01/F02 Description

The front panel of XBTF01/F02 keypad terminals includes:
1. A monochrome or color screen
   5.7, 9.5, or 10.4 in. (145, 241, or 264 mm)
   depending on the model

2. 2 x 4 or 2 x 5 dynamic function keys (depending on the model) with indicator lights

3. A communication monitoring indicator light

4. A keypad activity indicator light

5. 2 x 5 or 2 x 6 static function keys (depending on the model) with indicator lights and re-usable labels

6. Twelve service keys with indicator lights

7. Twelve alphanumeric keys [0 to 9, (+/–), (.)] associated with three alphabetical access keys (A to Z)

The front panel of XBTF03 touch-sensitive screen terminals includes:
1. A touch-sensitive color screen
   5.7 or 10.4 in. (145 or 264 mm)
   depending on the model

2. A communication monitoring indicator light

3. A tactile feedback activity indicator light

The front panel of XBTFC touch-sensitive screen terminals includes:
1. A touch-sensitive color screen
   5.7 or 10.4 in. (145 or 264 mm)
   depending on the model

2. A communication monitoring indicator light

3. A tactile feedback activity indicator light

4. An alarm indicator light

5. 4, 8, 12, or 16 touch-sensitive keys
   (depending on the Touch 'n Click model)

MAGELiS Touch 'n Click terminals

Specifications

Type of terminal		XBTFC022310	XBTFC044310	XBTFC084310	XBTFC064310
Environment					
Conforming to Standards		IEC 61131-2, IEC 61000-4-2 level 3, IEC 61000-4-3 and IEC 61000-4-4 level 3, IEC 60068-2-6, IEC 60068-2-27, UL 508, CSA C22.2 No. 142			
Approvals		CE, UL, CSA			
Temperature	Operation	+32 to +113 °F (0 to +45 °C)			
	Storage	–4 to +140 °F (–20 to +60 °C)			
Relative humidity		0–85% (without condensation)			
Degree of Protection	Front panel	IP 65, conforming to IEC 60529, NEMA Type 4, UL Type 4			
	Back panel	IP 20, conforming to IEC 60529			
Shock Resistance		Conforming to IEC 60068-2-27; semi-sinusoidal pulse 11 ms, 15 g in the 3 axes			
Vibrations		Conforming to IEC 60068-2-6; 10–57 Hz at 0.075 mm (0.003 in.); 57–150 Hz 1 g for 3 hours per axis			
Electrostatic Discharge		Conforming to IEC 61000-4-2, level 3			
Electromagnetic Interference		Conforming to IEC 61000-4-3, 10 V/m			
Electrical Interference		Conforming to IEC 61000-4-4, level 3			
Mechanical Characteristics					
Mounting and Fixing		Flush-mounted, fixed with spring clips (supplied), pressure-mounted on a panel of thickness 0.06–0.24 in. (1.6–6 mm)			
		8 spring clips	10 spring clips		
Material	Screen protection	1.6 mm (0.06 in.) polyester	2 mm (0.08 in.) polyester		
	Front frame	Polyphenyl oxide, 10% glass fibre (PPO GFN1 SE 1)			
	Keypad	Anti-UV treated toughened polyester (Autoflex EB AG)			
	Enclosure	Polyphenyl oxide, 10% glass fibre (PPO GFN1 SE 1)			
Touch-Sensitive Keys		4 in one row	8 in one row	16 in two rows	12 in two columns
Electrical Characteristics					
LCD Screen	Type	5.7 in. (145 mm) STN 256 colors back-lit with resistive matrix tactile feedback (8 x 4 cells)	10.4 in. (264 mm) TFT 256 colors with resistive matrix tactile feedback		
			13 x 8 cells	13 x 6 cells	9 x 10 cells
	Definition	320 x 240 pixels	640 x 480 pixels		
Power Supply	Voltage	24 Vdc not isolated			
	Limits	18–30 V, including 5% maximum ripple, microbreaks 1 ms maximum			
	Protection	Against polarity inversion and overloads			
Consumption		35 W			
Operating characteristics					
Signaling		1 communication monitoring LED, 1 keypad activity LED and 11 alarm LEDs			
Operating System		MAGELiS			
Dynamic RAM Memory		2.5 MB			
Application Memory		On Type II PCMCIA card: 8 MB (supplied) or 16 MB			
Dialogue Application	Maximum no. of pages	50–450 application, alarm, help, form, and recipe pages depending on the memory card used (512 alarm and 256 form max.)	30–300 application, alarm, help, form, and recipe pages depending on the memory card used (512 alarm and 256 form max.)		
	Curves	16 real-time curves			
	Recipes	Maximum 5000 parameter values in a maximum of 125 recipe records			
Communication	PLC/ Configuration PC	RS 232 C / RS 422 / RS 485 isolated serial link, downloadable communication protocols (see pages 6 and 7)			
	Printer	RS 232 C serial link			
	Bus or network	Slot for Type III PCMCIA communication card, communication protocols (see page 7)			
Real-Time Clock		Access to the PLC real-time clock			
Alarm Relay		1 volt-free N.O. contact, max 0.5 A, 24 Vdc/Vac			
Connection	Power supply and alarm relay	Plug-in terminal block, 5 screw terminals at intervals of 13/64 in.(5.08 mm) Max clamping capacity: #16 AWG (1.5 mm^2)			
	PLC	25-pin female SUB-D connector			
	Printer/ Configuration PC	9-pin male SUB-D connector

	Printer/ Configuration PC	9-pin male SUB-D connector		

MAGELiS® Operator Terminals
Development Software

XBTL1003/L1004 Software Functions

Simulation on PC compatible
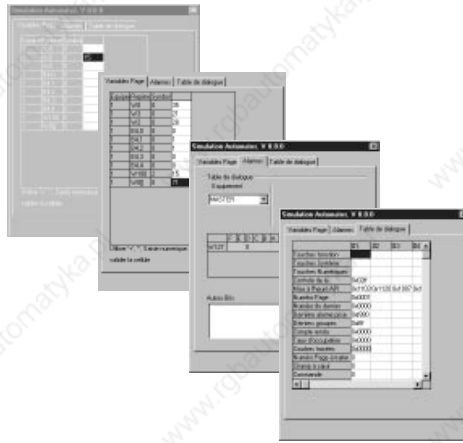

XBTL1003/L1004 software offers the option of simulating all the operator dialogue applications from the design office without the use of graphic terminals and PLCs.

The following can be tested using the simulation program and the keyboard on a PC compatible:

- Navigating between pages
- Entering variables
- Displaying variables
- Simulating an alarm

Using the function keys
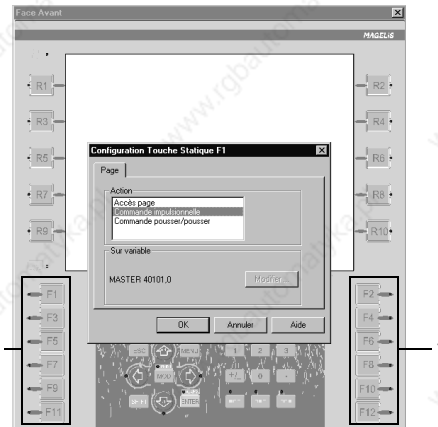

The operator terminals and graphic stations have two types of function keys: static and dynamic.

1. Static keys

These are defined for the whole application.

They may have the following functions:

— Access a page
— Pulse a PLC memory bit
— Latch a PLC memory bit
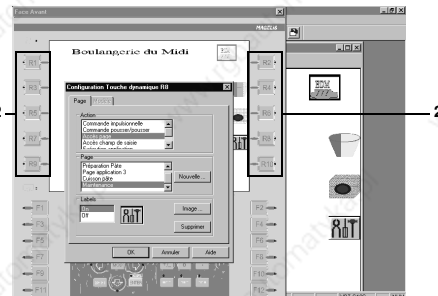

2. Dynamic keys

These are associated with one page. Their role can be reassigned or changed from one page to another.

They may have the following functions:

— Access a page
— Pulse a PLC memory bit
— Latch a PLC memory bit
— Position on a data entry field

A label (bitmap image) is assigned to each key, which may vary from page to page.

XBTL1003/1004 Software

XBTL1003/L1004 development software is used with the whole range of MAGELiS terminals to create operator dialogue applications designed for controlling automated systems.

XBTL1003/L1004▲ software runs on PC compatibles equipped with Windows 95 or NT 4.0 operating software. Applications created using XBTL1003/L1004 software are independent of the protocol used; it is possible to use the same operator dialogue application with all the different PLCs offered by the main market suppliers.

Configuration

XBTL1003/L1004 software is the only configuration software package for the MAGELiS range. It runs under Windows 95 or NT 4.0.

It is used to create various types of pages easily:

- Application pages (can be interlinked)
- Alarm pages
- Help pages
- Recipe pages
- Form pages

The pages can contain all sorts of variables and graphic objects, which are either predefined in the XBTL1003/L1004 software or created using other applications and then imported (bitmap format, etc.). Various properties can be assigned to them: min-max limits, color, movement, weighting, etc.

XBTL1003/L1004 software can be used to configure the function keys to activate commands on the machine or call application pages. It can also be used on the graphic terminals to import the PL7 or CONCEPT PLC symbols database.
Main toolbar
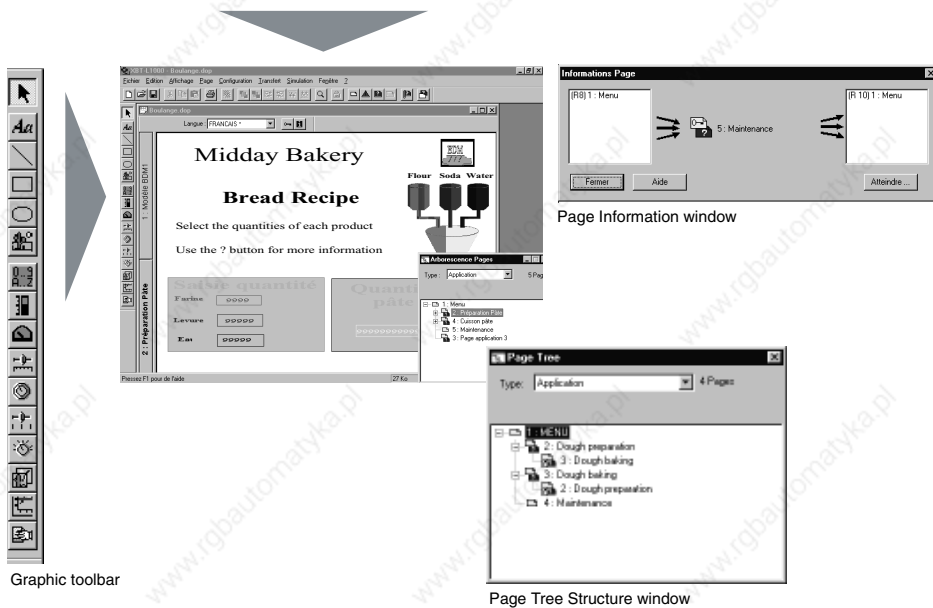

Graphic toolbar

Page Information window

Page Tree Structure window

▲ The XBTL1000 software package is designed for DOS 5.0 (minimum) with the Windows 3.1 operating system. Hardware requirements are a minimum of a 386 processor operating at 25 MHz, with 8 MB RAM and 20 MB free hard disk space.

MAGELiS® Operator Terminals
Development Software

Screen windows

XBTL1003/L1004 software is used to design page contents in WYSIWYG (what you see is what you get): anything created using the software is displayed in exactly the same way on the operator dialogue terminal screen. To assist the designer, the software offers a display unit or a virtual screen depending on the type of terminal.

XBTHP
XBTE
XBTHM
XBTF

Model pages
Model pages, created by the designer, are pages whose graphic format (text, images, or static objects) applies to all other pages in the same family.

There are three types of model pages:

- Application
- Alarm
- Help

Model pages are available with XBTF graphic terminals.

Alarm pages

Alarm pages indicate any faults in the process.

The advantage of alarm pages lies in their event-triggered display:

- During operation
  — When a fault occurs, it is often the consequence of other faults. The priority levels enable the terminal to display the most important fault: the one presenting the highest risk to the process.
  — The occurrence of any fault is time and date stamped.
- During maintenance operations the terminal memorizes the faults in sequence (log) making it easy to find the cause of the fault.

Help pages and help windows

Help pages and windows can be associated with application or alarm pages.

Help windows can be associated with any variable field.

32

Software for MAGELiS Terminals

Multilingual software packages are designed for FTX 517 terminals or PC compatibles (minimum requirements: 486 processor, 66 MHz, 30 MB free space on the hard disk and either 8 MB RAM memory with a Windows 95 operating system or 16 MB RAM memory with an NT 4.0 operating system). They include the following communication protocols: UNI-TELWAY, FIPIO, FIPWAY, MODBUS, Jbus, MODBUS Plus, KS.

1. TSXFPCA•00: shielded twisted pair trunk cable, 150 Ω, 0.3 in. (8 mm) dia. for normal environment or indoors
   or
   TSXFPCR•00: shielded twisted pair trunk cable, 150 Ω, 0.3 in. (8 mm) dia. for harsh environment or outdoors
2. TSXFPACC4: IP 65 T-junction box
3. TSXFPP10: PCMCIA card, FIPIO agent function
4. TSXFPP20: PCMCIA card, FIPIO/FIPWAY
5. TSXFPCG0•0: tap-off connecting cable for PCMCIA TSXFPP10/20 module card
6. TSXFPACC7: line terminator to be placed at each segment end

Connection to FIPWAY network
1. TSXFPCA•00: shielded twisted pair trunk cable, 150 Ω, 0.3 in. (8 mm) dia. for a normal environment or indoors
   or
   TSXFPCR•00: shielded twisted pair trunk cable, 150 Ω, 0.3 in. (8 mm) dia. for a harsh environment or outdoors
2. TSXFPACC4: IP 65 T-junction box
3. TSXFPP20: PCMCIA card, FIPIO/FIPWAY
4. TSXFPCG0•0: tap-off connecting cable for PCMCIA TSXFPP10/20 module card
5. TSXFPACC7: line terminator to be placed at each segment end

Connection to MODBUS Plus network
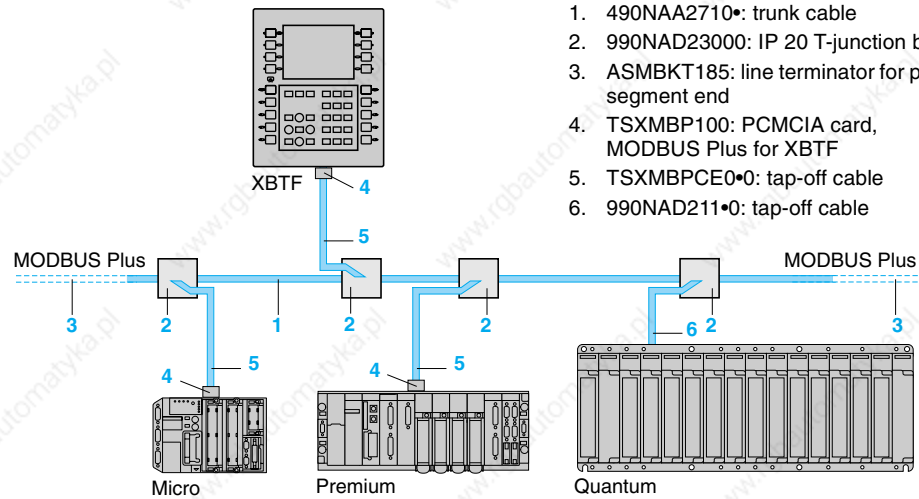

1. 490NAA2710•: trunk cable
2. 990NAD23000: IP 20 T-junction box
3. ASMBKT185: line terminator for placement at each segment end
4. TSXMBP100: PCMCIA card, MODBUS Plus for XBTF
5. TSXMBPCE0•0: tap-off cable
6. 990NAD211•0: tap-off cable

Or
1. TSXMBP100: MODBUS Plus PCMCIA card for type III slot on Micro or Premium PLCs.

2. 170MCI020/021: tap-off cable fitted with an RJ 45 type connector at each end (basic T interface). Lengths : 0.25, 0.75, 3, or 10 m.

3. 170XTS02000: IP 20 T-junction, provides tap-off for the MODBUS Plus cable (cable equipped with RJ 45 type connector at each end). Has a 9-pin SUB-D connector for connection of the equipment.

4. TSXMBPCE002: tap-off cable for MODBUS Plus PCMCIA card, equipped with a miniature 20-pin connector on the PCMCIA side and a 9-pin SUB-D type connector on the network side. Can be used as an extension for cable 990NAD21110/30. Length: 0.2 m.

5. 170XTS02100: set of 2 line terminators (impedance matching) for T-junction 170XTS02000, to be placed at each segment end

Tap-off connection cables

Description	Use		Length ft (m)	Catalog Number	Weight lb (kg)
	From	To			
Cables for PCMCIA card	TSXFPP10/20 card	TSXFPACC4 junction box	3 [1]	**TSXFPCG010**	0.46 (0.21)
			10 [3]	**TSXFPCG030**	0.90 (0.41)

[1] The specifications and performance of the FIPIO bus or FIPWAY network depend on the use of these TSXFP accessories.

[2] Normal environment:
— no special environmental constraints
— operating temperature between +5 °C and +60 °C
— fixed installations

[3] Harsh environment:
— resistance to hydrocarbons, industrial oils, detergents and solder chips
— relative humidity up to 100%
— saline environment
— extreme variations in temperatures
— operating temperature between –10 °C and +70 °C
— mobile installations

[4] Use in a daisy-chain: radius of curvature = 10 x cable diameter, either 3.1 or 3.7 in. (80 or 95 mm). For other special restrictions, please consult your regional sales office.
