Incorporated two-lamp/Edge-light type backlight
Wide viewing angle**

DESCRIPTION

NL6448BC33-31 is a TFT (thin film transistor) active matrix color liquid crystal display (LCD) comprising amorphous silicon TFT attached to each signal electrode, a driving circuit and a backlight. NL6448BC33-31 has a built-in backlight. Backlight includes long-life-lamps and the lamps are replaceable.

The 26 cm (10.4 inches) diagonal display area contains 640 × 480 pixels and can display 262,144 colors simultaneously.

NL6448BC33-31 is suitable for industrial application use because of the wide viewing angle and the high luminance. Also, the viewing direction is selectable either upper or lower side by changing scan direction.

NL6448BC33-31 interface is compatible with NL6448AC33-18, -18A, -18B and -27.

FEATURES

- Wide viewing angle (with Retardation Film)
- Smooth polarizer surface (No antiglare treatment)
- High luminance (350 cd/m², typ.: saturated value, at room temp.)
- Low reflection
- 6-bit digital RGB signals
- Data enable function
- Backlight with two long-life-time lamps (one lamp holder, inverter-less)
- Lamp holder replaceable (Type No.: 104LHS31)
- Reversible scan direction (with DPS pin)
- Replaceable lamp holders (Type No.: 104LHS31)
- Recommended inverter (Part No.: 104PWRI)
- Best viewing angle select function (with MVA terminal)
- Luminance control
- Easy to attach a touch panel

APPLICATIONS

- Display terminals for control system
- Monitors for process controller
- Industrial PCs

STRUCTURE AND FUNCTIONS

A color TFT (thin film transistor) LCD module is comprised of a TFT liquid crystal panel structure, LSIs for driving the TFT array, and a backlight assembly. The TFT panel structure is created by sandwiching liquid crystal material in the narrow gap between a TFT array glass substrate and a color filter glass substrate. After the driver LSIs are connected to the panel, the backlight assembly is attached to the backside of the panel.

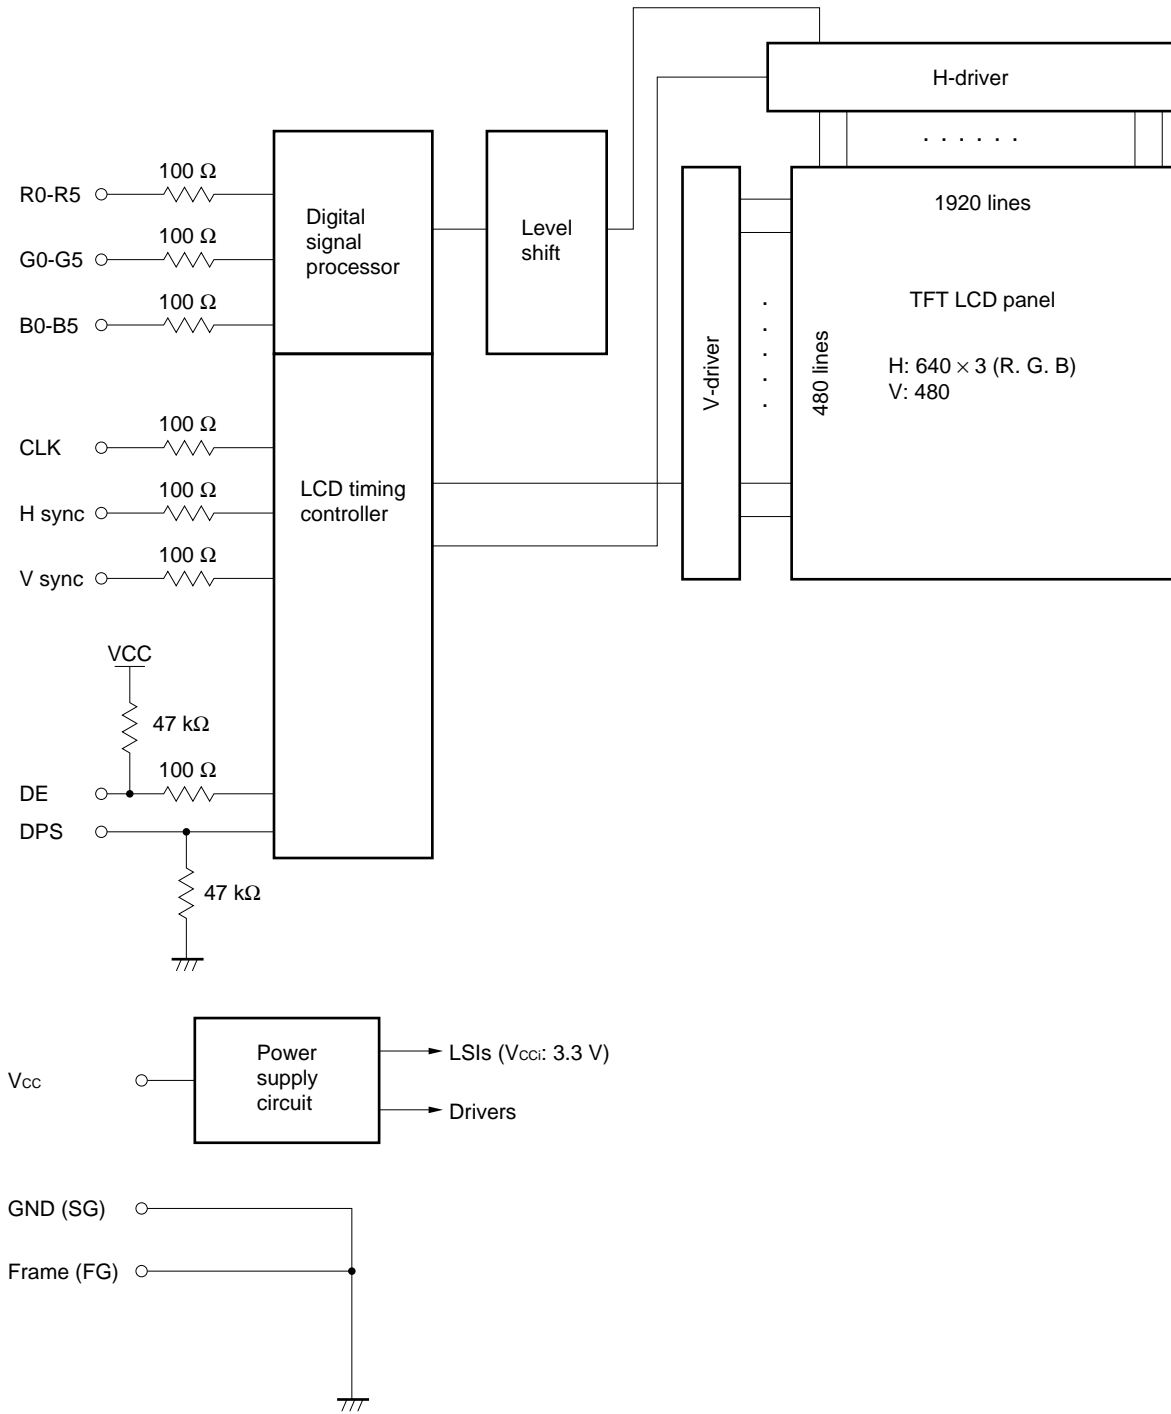

RGB (red, green, blue) data signals from a source system is modulated into a form suitable for active matrix addressing by the onboard signal processor and sent to the driver LSIs which in turn addresses the individual TFT cells.

Acting as an electro-optical switch, each TFT cell regulates light transmission from the backlight assembly when activated by the data source. By regulating the amount of light passing through the array of red, green, and blue dots, color images are created with clarity.

OUTLINE OF CHARACTERISTICS (at room temperature)

If F_t is out of the recommended value, interference between F_t frequency and Hsync frequency may cause beat on the display.

SUPPLY VOLTAGE SEQUENCE

- Notes**
1. Signals: CLK, Hsync, Vsync, DE, DATA (R0-R5, G0-G5, B0-B5)
 2. The supply voltage for input signals should be the same as V_{CC}.
 3. Apply V_{DDB} within the LCD operation period. When the backlight turns on before LCD operation or the LCD operation turns off before the backlight turns off, the display may momentarily become white.
 4. While the power is off, please keep whole signals at low level or high impedance.

Notes 1. The contrast ratio is calculated by using the following formula.

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance with all pixels in white}}{\text{Luminance with all pixels in black}}$$

The Luminance is measured in darkroom.

- The luminance is measured after 20 minutes from the module works, with all pixels in white. Typical value is measured after luminance saturation.

3. The luminance uniformity is calculated by using following formula.

$$\text{Luminance uniformity} = \frac{\text{Maximum luminance}}{\text{Minimum luminance}}$$

The luminance is measured at near the five points shown below.

4. Definitions of viewing angle are as follows.

The viewing angles are reference.

5. Definition of response time is as follows.

Photodetector output signal is measured when the luminance changes “White” to “Black” . Response time (ton) is the time between 10% and 100% of the photodetector output amplitude. Response time (toff) is the time between 0% and 90% of the output amplitude.

GENERAL CAUTIONS

Next figures and sentence are very important. Please understand these contents as follows.

	CAUTION This figure is a mark that you will get hurt and/or the module will have damages when you make a mistake to operate.
---	--

	This figure is a mark that you will get an electric shock when you make a mistake to operate.
	This figure is a mark that you will get hurt when you make a mistake to operate

 CAUTIONS

	Do not touch an inverter, on which is stuck a caution label, while the LCD module is under the operation, because of dangerous high voltage.
---	--

- (1) Caution when taking out the module
 - a) Pick the pouch only, when taking out the module from a carrier box.
- (2) Cautions for handling the module
 - a) As the electrostatic discharges may break the LCD module, handle the LCD module with care against electrostatic discharges.
 - b)  As the LCD panel and backlight element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.
 - c) As the surface of polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
 - d) Do not pull the interface connectors in or out while the LCD module is operating.
 - e) Put the module display side down on a flat horizontal plane.
 - f) Handle connectors and cables with care.
 - g) When the module is operating, do not lose CLK, Hsync or Vsync signal. If any one or more of these signals is lost, the LCD panel would be damaged.
 - h) The torque for mounting screws should never exceed 0.294 N·m (3 kgf·cm).
- (3) Cautions for the atmosphere
 - a) Dew drop atmosphere must be avoided.
 - b) Do not store and/or operate the LCD module in high temperature and/or high humidity atmosphere. Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.
 - c) This module uses cold cathod fluorescent lamps. Therefore, the life time of lamp becomes short conspicuously at low temperature.
 - d) Do not operate the LCD module in high magnetic field.
- (4) Cautions for the module characteristics
 - a) Do not apply any fixed patterns data signal for a long time to the LCD module at product aging. It may cause image sticking.
 - b) This module has the retardation film which may cause the variation of color hue in the different viewing angles. The ununiformity may appear on the screen under the high temperature operation.

(5) Other cautions

- a) Do not disassemble and/or reassemble LCD module.
- b) Do not readjust variable resistors nor switches etc.
- c) When returning the module for repair or etc, please pack the module not to be broken. We recommend the original shipping packages.

Liquid Crystal Display has the following specific characteristics. There are not defects nor malfunctions.

- The display condition of the LCD module may be affected by the ambient temperature.
- The LCD module uses cold cathode tube for backlighting. Optical characteristics, like luminance or uniformity, will change during time.
- Uneven brightness and/or small spots may be noticed depending on different display patterns.

NEC Corporation does not assume any liability for infringement of patents. Copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its Electronic Components, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC Electronic Components, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

“Standard”, “Special”, and “Specific”. The Specific quality grade applies only to devices developed based on a customer designated “quality assurance program” for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is “Standard” unless otherwise specified in NEC’s Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
