

MFD-Titan – simple visualization and control

In addition to the functions of the easyRelay the **MFD-Titan** offers some powerful visualization options. The screen editor is used for setting parameters for the display.

MFD-Titan is

- Visualization and control in one device
- Powerful and inexpensive
- Expandable and networkable
- Suitable for harsh environments thanks to IP65 protection

easyControl – powerful compact controller

easyControl is the logical continuation of the easy series. The IEC61131-3-based easySoft-CoDeSys software perfectly equips the easyControl for applications that were previously impossible for the easy world.

easyControl is

- Perfectly designed for both machine and system building
- A compact controller with integrated or detachable display
- Expandable as required
- Networkable

easySafety – Combining safety and standard technology efficiently

NEW

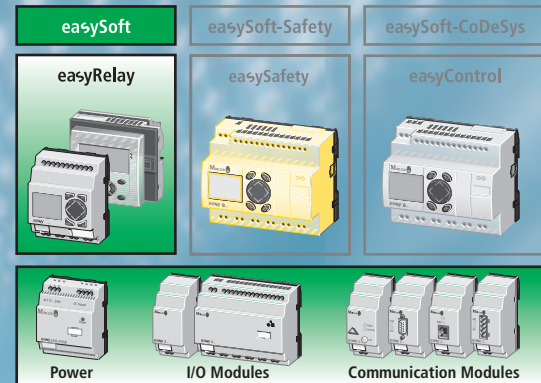

The new **easySafety** control relay monitors all the safety equipment on the machine. It enables applications to be implemented for the most demanding safety requirements in accordance with international safety standards.

easySafety is

- All in one: safety and standard control functions in one compact device
- Manipulation and know-how protection thanks to multi-level safety and security concept
- Configuration by simple assignment of tested safety function blocks

Refreshingly Easy. The Clever easyRelays.

xControl

The easy500/700 and easy800 control relays come with a full range of technical resources to implement applications for industrial and building automation, machine building or plant construction. A host of different device versions with various functions, voltage types, expansion and networking options are available for implementing the right solution. As well as offering the main functions of the easy500/700 such as multi-functional relays, impulse relays, counters, analog value comparators, time switches, automatic DST function and retentive actual values, the easy800 offers a host of function blocks such as PID controllers, maths function blocks, value scaling, and many more. Its ability to network up to 8 devices makes the easy800 the most powerful control relay on the market.
