Circuit Protector Selection Guide

Type	NRF1	NRF2	NRPS	NRPF	
Appearance		With manual OFF mechanism 	Slim 	Flat 	
Tripping method	Thermal tripping				
No. of Poles	1 pole		1 pole (SPST-NC, SPDT)		
Internal Circuit (Current Trip)	Series Trip		Series trip		
Rating	Maximum Circuit Voltage		32V DC, 250V AC		
	Rated Current		300, 500mA 1, 2, 3, 5, 8, 10, 15A		
	Rated Interrupting Capacity		300 mA to 5A: Rated current × 6 10, 15A: Rated current × 10		
	Tripping Time		1A to 4A: Rated current × 10 (resistive load) 5A, 6A: 250V AC/40A, 32V DC/40A (resistive load)		
Reset Time		No trip at the rated current Within 1 hour at 135% the rated current			
Time Delay Curves		1 min minimum (*1)			
Auxiliary Contacts		1 type			
Mounting Style		Panel cut-out (Snap-on mounting)			
Certification		UL, CSA, TÜV (*2),  UL, 			
Page		1173		1176	

*1: Reset time is the value at the reference ambient temperature of 25°C.

*2: TÜV certification: for 8A, 10A and 15A only.

Common Description of Circuit Protectors

Internal Circuit Overview and Application Examples

Series Trip

This is the most common circuit protector, providing excellent overload and short circuit protection. It can also be used as ON/OFF switch, except NRF and NRP series.

Series Trip with Auxiliary Contacts

As the auxiliary contact operation is interlocked with the ON/OFF of the main contactor, circuit protector operation can be monitored by a lamp. The auxiliary contact can also be used to control auxiliary circuits.

Series Trip with Alarm Contacts

The alarm contact is electrically independent of the ON/OFF of the main contactor, but actuates when the protective element operates. Therefore, the alarm contact can be used with a lamp or buzzer to indicate trip operation and control alarm circuits. After the alarm contact has tripped, turn the lever ON to set the alarm contact.

Dual-coil Type

The dual coil type circuit protector is provided with both a series trip (current trip) and relay trip (voltage trip). In the following example circuit, Coil A (current coil) performs overload and short circuit protection, while Coil B (voltage coil) serves to shut down the circuit when the alarm contact detects an abnormal condition.

Relay Trip/Voltage Trip

The internal structure is identical to the current tripping protector, but the protective element has no time-delay function and the load circuit is cut off by the instantaneous tripping of the protector. Suitable for purposes, such as cutting off the power supply by using the alarm signal of the secondary circuit of the transformer.

•Applications by Time Delay Curve

Time Delay Curves	Applications
Curve AD Curve AA	The most common curves used for circuit breakers.
Curve MD Curve MA	Suited for motor loads that draw high inrush currents lasting for a rather long period of time.
With inertia delay (Inertia delay mechanism)	Suited for transformer and lamp loads that draw steep inrush currents.

NH1 Series Circuit Protectors

Wide Range of Applications from Office Automation and Consumer Use to Factory Automation.

- Compact, lightweight, and high-performance circuit protectors.
- Rocker type snaps into a panel.
- Rated voltage: 250V AC and 65V DC
- 35mm-wide DIN rail mounting (NH1V)
- Available with dual-coil type
- Available with auxiliary contact or alarm contacts.
- Available with inertia delay
- Hydraulic-magnetic tripping system
- Safe trip-free mechanism
- Available in tab terminal type and screw-terminal type.

This product is recognized by Underwriters Laboratories under UL1077 as a "Supplementary Protector."

Applicable Standards	Certification Mark	Certification Organization / File No.
UL1077 CSA C22.2 No. 235 (Note 1)		UL/c-UL File No. E68029

NH1 Series Circuit Protectors

•Rocker Color, Rocker Indication (NH1Y/NH1L)

Rocker Color (Code)	Black (blank) Red (R), Green (G), White (W)
Rocker Indication (Code)	(blank)
	(A)
	(C)
	(D)

•Operating Voltage of Indicator (NH1L)

Indicator	Rated Voltage	Code	
Neon (Red)	125V AC, 50/60Hz (operating voltage: 100 to 125V AC)	1	
LED (Red) [Note]	For AC/DC (operating voltage: within +10% of the rated voltage)	6V	3
		12V	4
		24V	5
		48V	6

Note: Both types of indicators contain a current-limiting resistor.

•Operation of Auxiliary Contacts

Since auxiliary contact operations are interlocked with ON/OFF positions of main terminal, operating status of the circuit protector can be monitored using a lamp. Auxiliary contacts also serve as a control of auxiliary circuits.

Operator Position	NO Contact	NC Contact
ON	Closed	Open
Tripped	Open	Closed
OFF	Open	Closed

•Lever Color (NH1S, NH1V): Black

•Operation of Alarm Contacts

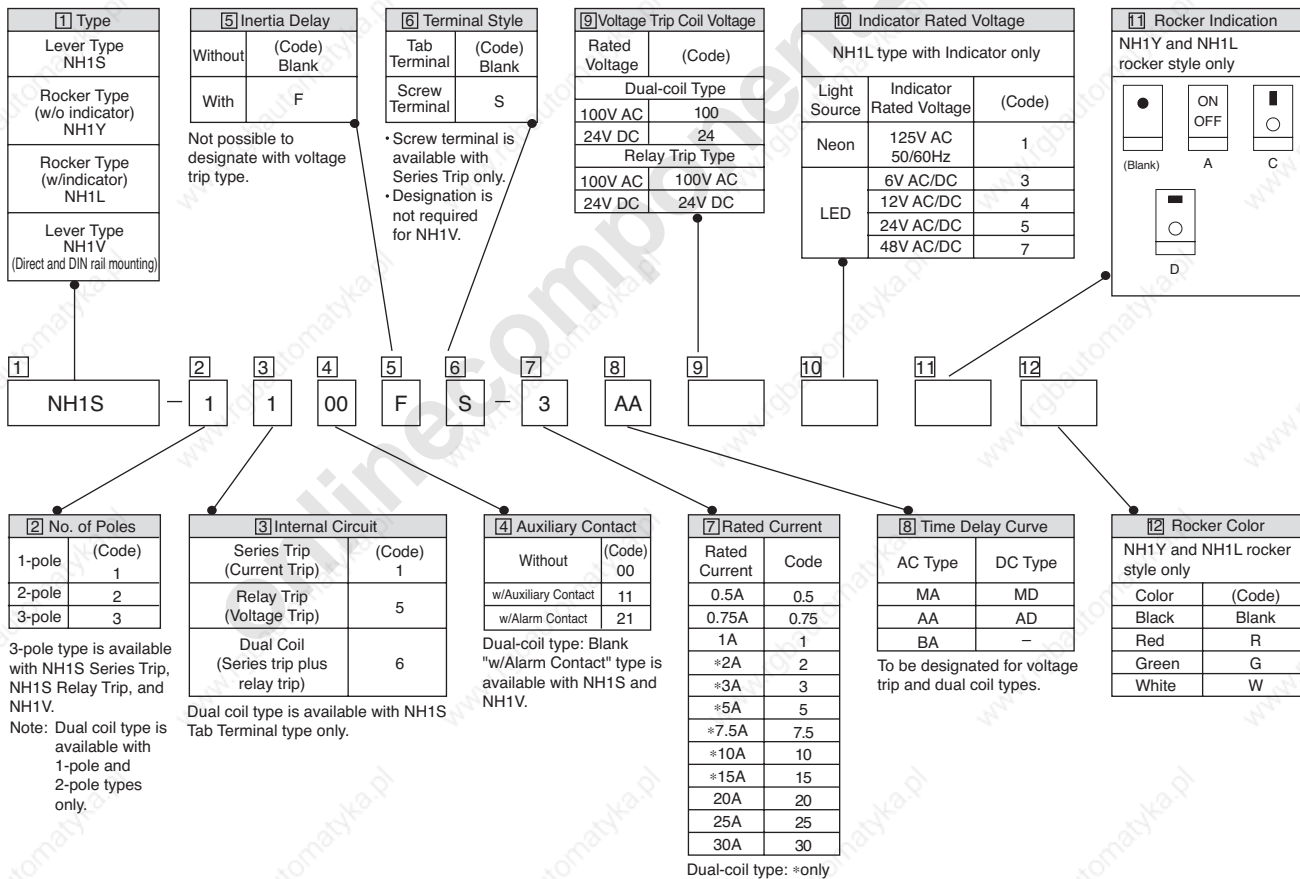

Alarm contacts are not interlocked with main contacts and operate only when an overcurrent occurs.

Operator Position	NO Contact	NC Contact
ON	Open	Closed
Tripped	Closed	Open
OFF	Open	Closed

NH1 Series Circuit Protectors

Overcurrent - Time Delay Characteristics (sec at 25°C) [at vertical mounting]

For	Time Delay Curve	Percent of Rated Current							
		100%	125%	150%	200%	400%	600%	800%	1000%
AC 50/60Hz	AA	No Trip	12-180	6-70	2-25	0.15-3.5	0.005-0.3	0.004-0.13	0.004-0.04
	BA	No Trip	0.7-15	0.3-4	0.1-1.3	0.02-0.25	0.006-0.13	0.003-0.07	0.003-0.04
	MA	No Trip	50-800	20-300	5.5-110	0.3-17	0.008-2.5	0.004-0.5	0.004-0.1
DC	AD	No Trip	10-180	6-75	2.6-30	0.5-7	0.015-3	0.004-0.8	0.003-0.1
	MD	No Trip	70-800	25-300	10-100	1.2-20	0.02-5	0.004-0.65	0.003-0.1

Note: Circuit protectors with inertia delay may have a slightly longer time delay at 400% or higher.

•Dual Coil Type

For	Time Delay Curve	Percent of Rated Current							
		100%	125%	150%	200%	400%	600%	800%	1000%
AC 50/60Hz	AA	No trip	6-500	2-150	0.7-40	0.1-8	0.005-1.2	0.003-0.2	0.003-0.15
	BA	No trip	0.7-60	0.25-20	0.07-6	0.013-1.2	0.004-0.4	0.003-0.2	0.003-0.15
	MA	No trip	50-800	15-600	6-250	0.4-40	0.06-3	0.003-0.2	0.003-0.15
DC	AD	No trip	10-180	1.5-100	0.6-30	0.1-7	0.015-3	0.004-0.8	0.003-0.1
	MD	No trip	70-800	14-600	5-200	0.8-40	0.007-20	0.003-4	0.003-0.1

Note: Circuit protectors with inertia delay may have a slightly longer time delay at 400% or higher.

Time Delay Curves

Note: The dashed lines show dual coil type.

For AC

For DC

Time Delay Curve and Ambient Temperature

Since NH1 series circuit protectors employ an oil dash pot, the rated current (trip current) is not affected by ambient temperatures but the time delay varies with the oil viscosity in the oil dash pot. Lower oil viscosity at higher temperatures results in shorter delay, whereas at lower temperatures the delay will be prolonged. The time delay curves on the preceding page are at 25°C. With reference to these curves, time delays can be corrected.

Temperature Correction Curve

The time delay curves are at 25°C. With reference to the following figure, time delays can be corrected.

Circuit Protector with Inertia Delay

1. Circuit protectors equipped with inertia delay do not respond to high inrush currents caused by transformer or lamp loads, but perform the specified interruption on the subsequent overcurrents.
2. Inertia delay is designed not to trip on a pulse of 1500% the rated current for a duration of 10 ms.

Impedance and Coil Resistance

• Series Trip Type [Current Trip Type]

Rated Current	For AC 50/60Hz Impedance (Ω)		Rated Current	For DC Resistance (Ω)	
	Curves AA, BA, and MA	Curves AD and MD		Curves AA, BA, and MA	Curves AD and MD
0.5A	3.36	3.24	7.5A	0.018	0.017
0.75A	1.49	1.45	10A	0.012	0.012
1A	0.92	0.90	15A	0.0068	0.0066
2A	0.21	0.21	20A	0.0048	0.0048
2.5A	0.13	0.13	25A	0.0043	0.0043
3A	0.092	0.09	30A	0.0041	0.0036
5A	0.036	0.036			

Note: Tolerance: ±25% (up to 5A), ±50% (7.5A or higher)

• Relay Trip Type [Voltage Trip Type]

Rated Voltage	For AC 50/60Hz Impedance (Ω)	For DC Resistance (Ω)
100V AC	1350	—
24V DC	—	248

• Dual Coil Type [Current Trip Type]

Rated Current	For AC 50/60Hz Impedance (Ω)		For DC Resistance (Ω)
	Curves AA, BA, and MA	Curves AD and MD	
2A	0.308	0.307	
3A	0.129	0.127	
5A	0.0509	0.0518	
7.5A	0.0249	0.0245	
10A	0.0150	0.0150	
15A	0.0084	0.0080	

Note: Tolerance: ±25% (up to 5A), ±50% (7.5A or higher)

[Voltage Trip Type]

Rated Voltage	For AC 50/60Hz Impedance (Ω)	For DC Resistance (Ω)
100V AC	321	—
24V DC	—	15.7

Note: Tolerance: ±25%

• Voltage Drop Due to Coil Resistance or Impedance

The internal resistance or impedance of a circuit protector tends to be larger for a smaller rated current. Therefore, when circuit protectors of a small rated current are used, voltage drop should be taken into consideration. Internal resistance also varies with time delay curves in spite of the same rated current, which should also be considered during installation.

•2-pole Type

• Determine the dimension A within the panel thickness using the following formula:

$$\text{Dimension A (mm)} = 50.4 + (\text{Panel thickness} - 0.8) \times 0.87$$

Applicable panel thickness: 0.8 to 3.2 mm

• Panel Mounting Screw Length

Select the screw length with reference to the following table.

Panel thickness (mm)		0.8	1.0	1.2	1.4	1.6	1.8	2.0	2.3	2.6	3.2
Without washer		5	5	5	6	6	6	6	6	7	7
With plain washer (0.5 mm thick)		5	6	6	6	6	6	7	7	7	8
With spring washer (0.7 mm thick)		6	6	6	6	6	7	7	7	7	8
With plain washer (0.5 mm thick) and spring washer (0.7 mm thick)		6	6	7	7	7	7	7	8	8	8

M3 screw mounting
Tightening torque: 0.5 N·m minimum
Tightening strength: 0.7 N·m

[NH1V]

•1-pole Type

•2-pole Type

•3-pole Type

• Installation Angle

Tripping method is hydraulic magnetic. Minimum operating current varies with installation angle because operating currents are influenced by the weight of movable iron core. With reference to the following figure, correct the rated current.

Note 1: The rated current does not change depending on the installation angle.

Note 2: The minimum operating current is calculated from the following formula:
(Minimum operating current) = (Rated current) × 125% × (Correction factor by installation angle)

Instructions

One-pole type circuit protectors cannot be combined to make 2- or 3-pole units due to their characteristics. Order multi-pole types from IDEC.

• Recommended Soldering Conditions

Solder the main terminal at a temperature of 390°C within 10 seconds using a 60W soldering iron.

Solder the auxiliary/alarm terminal at a temperature of 350°C within 3 seconds using a 60W soldering iron. (Sn-Ag-Cu lead-free solder is recommended.)

When soldering, do not touch the circuit protector housing, auxiliary and alarm contacts with the soldering iron, and do not bend the terminals or pull the wires.

Check your actual soldering conditions before soldering.

• Main Circuit Terminal: Screw terminal

1. Applicable wire size	1.25 to 5.5 mm ²
2. Applicable crimping terminal	R1.25-4 to R5.5-4
3. No. of crimping terminal	1
4. Tightening torque	1.0 to 1.2 N·m
5. Tensile strength (Static 1 minute)	Axial direction: 80N Transverse direction: 20N

Thrust force (screw pressing load) in screw tightening should be 29N or less. The screw driver may slip out depending on the shape type and conditions. In this case, hold the terminal with a tool and tighten the screw by applying a thrust force of about 50N without deforming the terminal.

NRA Series Circuit Protectors

Best Selling Circuit Protector [onlinecomponents.com](http://www.onlinecomponents.com)
Wide selection of applications ranging from computers to office and factory automation

- Available with inertia delay
- Available with auxiliary contact or alarm contact
- Hydraulic-magnetic tripping system
- Safe trip-free mechanism
- Vibration-proof design
- Variety of mounting methods
- IEC(IEC 60934) compliant
- Available in tab-terminal type and screw-terminal type suited for crimping-terminal wiring.

Specifications

Type	NRAS	NRAN	NRAR
Operator Style	Lever	Lever	Rocker (Non-illuminated, Illuminated)
Protection Method	Hydraulic-magnetic tripping system		
Internal Circuit	Series trip (current trip) Relay trip (voltage trip) Series trip (current trip) with auxiliary contacts Series trip (current trip) with alarm contacts		
No. of poles	1, 2, 3 poles		1 pole
Rated Voltage	250V AC 50/60Hz, 65V DC		
Minimum Applicable Load	24V AC/DC, 100 mA (reference value)		
Rated Current	Current trip: 0.3A, 0.5A, 0.75A, 1A, 2A, 3A, 5A, 7.5A, 10A, 15A, 20A, 25A, 30A		
Trip Voltage (Voltage trip)	Rated voltage: 24V DC (operating at 90% of the rated voltage or higher, at 25°C) Voltage application duration: 1 sec maximum Trip time: 0.05 sec maximum (at the rated voltage)		
Rated Interrupting Capacity	250V AC 50/60Hz 1000A, 65V DC 1000A		
Auxiliary Contact Alarm Contact	SPDT microswitch 250V AC 5A (resistive load), 50V DC 1A (resistive load)		
Reference Temperature	+25°C		
Operating Temperature	-40 to +85°C (no freezing)		
Operating Humidity	45 to 85% RH (no condensation)		
Insulation Resistance	100 MΩ minimum (500V DC megger)		
Dielectric Strength	2000V AC for 1 minute (between live part and ground, between terminals of different poles, between terminals of the same poles when main contacts are open, between main circuit and auxiliary contact)		
Vibration Resistance	100 m/s ² (10 to 100Hz)		
Shock Resistance	1000 m/s ²		
Life	Over 10,000 operations (6 operations per minute)		
Terminal Style	Main terminal: Tab terminal #250, M4 screw terminal Auxiliary contact/Alarm contact: Tab terminal #110		
Weight (Approx.) (NRAS series trip)	1-pole type: 60g 2-pole type: 125g 3-pole type: 190g		

Indicator Ratings (Illuminated rocker unit)

Indicator	Rated Voltage
Neon	100 to 110V AC, 50/60Hz 200 to 220V AC, 50/60Hz
LED	4 to 8V DC

NRA Series Circuit Protectors

Time Delay Curves

For AC

onlinecomponents.com
THE ONLINE DISTRIBUTOR OF ELECTRONIC COMPONENTS

For DC

Time Delay Curve and Ambient Temperature

Since the NRA series circuit protectors employ an electromagnetic tripping system, the rated current (trip current) is not affected by the ambient temperatures, but the time delay varies with the oil viscosity in the oil dash pot. Lower oil viscosity at higher temperatures results in shorter delay, whereas at lower temperatures the delay will be prolonged.

The above time delay curves are at 25°C. With reference to these curves, time delays can be corrected.

Temperature Correction Curve

The above time delay curves are at 25°C. With reference to the following figure, time delays can be corrected.

Circuit Protector with Inertia Delay

Circuit protectors equipped with inertia delay do not respond to high inrush currents caused by transformer or lamp loads, but perform the specified interruption on the subsequent overcurrents.

Note: Inertia delay is designed not to trip on a pulse of 20 times the rated current (peak value) for a duration of 8 ms. See the above curve.

All dimensions in mm.

Impedance and Coil Resistance

Series Trip (Current Trip)

onlinecomponents.com

Rated Current	Current Trip	
	For AC 50/60Hz Impedance (Ω)	For DC Resistance (Ω)
	Curves AA, BA, and MA	Curves AD and MD
0.3A	9.82	9.67
0.5A	3.36	3.24
0.75A	1.49	1.45
1A	0.92	0.90
2A	0.21	0.21
3A	0.092	0.09
5A	0.036	0.036
7.5A	0.018	0.017
10A	0.012	0.0012
15A	0.0068	0.0066
20A	0.0048	0.0048
25A	0.0043	0.0043
30A	0.0041	0.0036

Note: Tolerance: ±25% (up to 5A), ±50% (7.5A or higher)

Relay Trip (Voltage Trip) (at 25°C)

Rated Voltage	For DC Resistance (Ω)
24V DC	163

Note: Tolerance: ±25%

Voltage Drop due to Coil Resistance or Impedance

The internal resistance or impedance of a circuit protector tends to be larger for a smaller rated current. Therefore, when circuit protectors of a small rated current are used for a power-supply switch, voltage drop should be taken into consideration. Internal resistance also varies with time delay curves in spite of the same rated current, which should also be considered during installation.

NRA Series Circuit Protectors

NRAS (Lever Type with Flush Plate)

NRAN (Lever Type)

• 1-pole Type

• 2-pole Type

• 3-pole Type

NRAR (Rocker Type)

All dimensions in mm.

Mounting Hole Layout

Type	NRAS	NRAS with Flush Plate	NRAN and NRAR
Panel Cut-out	<p>Note: See "Accessories" for the mounting hole when the plug-in base is used.</p>	<p>Note: Flush plate is installed on the circuit protector before shipment and cannot be removed.</p>	<p>Note: "Accessories" for the mounting holes when the flush plate or plug-in base is used.</p>

M3 screw mounting
 Tightening torque: 0.5 N·m
 Tightening strength: 1.1 N·m

Panel Mounting Screw Length

Select the screw length with reference to the following table.

Panel thickness (mm)	0.8	1.0	1.2	1.4	1.6	1.8	2.0	2.3	2.6	3.2
Without washer	(4)	(4)	5	5	5	5	5	6	6	6
With plain washer (0.5 mm thick)	5	5	5	5	6	6	6	6	6	(7)
With spring washer (0.7 mm thick)	5	5	5	5	6	6	6	6	6	7
With plain washer (0.5 mm thick) and spring washer (0.7 mm thick)	6	6	6	6	6	6	6	(7)	(7)	8

Note: Avoid using screws in the parenthesized lengths whenever possible.

Installation Angle

Overcurrent tripping method is hydraulic magnetic. Minimum operating current varies with installation angle because operating currents are influenced by the weight of movable iron core. With reference to the following figure, correct the minimum operating current.

Instructions

One-pole type circuit protectors cannot be combined to make 2- or 3-pole units due to their characteristics. Order multi-pole types from IDEC.

Recommended Soldering Conditions

Solder the main terminal at a temperature of 390°C within 10 seconds using a 60W soldering iron.

Solder the auxiliary/alarm terminal at a temperature of 350°C within 3 seconds using a 60W soldering iron. (Sn-Ag-Cu lead-free solder is recommended.)

When soldering, do not touch the circuit protector housing, auxiliary and alarm contacts with the soldering iron, and do not bend the terminals or pull the wires.

Check your actual soldering conditions before soldering.

Main Circuit Terminal: Screw terminal

1. Applicable wire size	1.25 to 5.5 mm ²
2. Applicable crimping terminal	R1.25-4 to R5.5-4
3. No. of crimping terminal	1
4. Tightening torque	1.0 to 1.2 N·m
5. Tensile strength (Static 1 minute)	Axial direction: 80N Transverse direction: 20N

Thrust force (screw pressing load) in screw tightening should be 29N or less. The screw driver may slip out depending on the shape type and conditions. In this case, hold the terminal with a tool and tighten the screw by applying a thrust force of about 50N without deforming the terminal.

NRL Series Circuit Protectors

Miniature circuit protectors with hydraulic-magnetic tripping system, allow for space and cost savings. Long life also reduces maintenance costs.

- Compact size (only 36.6H × 16.8W × 42D mm)
- One-lever (one-rocker) for 2-poles, ensures proper interruption to both poles when one pole is tripped.
- Low, middle, and high speed response
- Variety of rated currents and internal circuits
- Available with auxiliary contacts and inertia delay
- Over 20,000 mechanical operations
- Hydraulic-magnetic tripping system
- Safe trip-free mechanism
- Vibration-proof design

This product is recognized by Underwriters Laboratories under UL1077 as a "Supplementary Protector."

NRL Series Circuit Protectors

Internal Circuits

NRLT, NRLP, NRLL (Non-illuminated), and NRLK

Series Trip (Current Trip)	Series Trip (Current Trip)	Relay Trip (Voltage Trip)	Switch Only Type	Switch Only Type With Auxiliary Contact

NRLY (Illuminated Type), NRLR (Illuminated Type)

Series Trip (Current Trip)	Series Trip (Current Trip)	Relay Trip (Voltage Trip)	Switch Only Type	Switch Only Type With Auxiliary Contact

Note 1: On the 2-pole type, one auxiliary contact is provided on the left side as viewed from the front.
See the dimensional drawing for the terminal arrangement.

Note 2: NRLP is available with series trip and switch type.

- Wiring Example

• Lead wires are color-coded as follows (illuminated type):

Lead wire	Color	Neon Indicator	LED Indicator
(Lead wire A)	Red	AC	Positive
(Lead wire B)	Black	AC	Negative

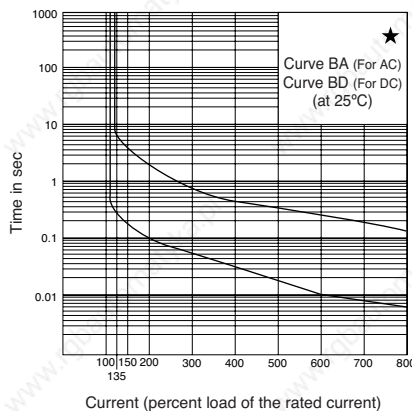

Overcurrent - Time Delay Characteristics (sec at 25°C)

Time Delay Curves		Percent of Rated Current						
AC 50/60Hz	DC	100%	135%	150%	200%	400%	600%	800%
AA ★	AD ★	No Trip	3-70	2-40	1-15	0.1-4	0.01-2	0.007-0.8
BA ★	BD ★	No Trip	0.3-7	0.2-5	0.1-2	0.03-0.5	0.01-0.3	0.007-0.15
EA	ED	No Trip	0.015-0.5	0.01-0.25	0.009-0.1	0.006-0.03	0.005-0.02	0.004-0.02

Note: Curves marked with ★ are also available with inertia delay. (Inertia delay is not available for Curves ED and EA)

Time Delay Curves

Note: Curves marked with ★ are also available with inertia delay.

Circuit Protector with Inertia Delay

Inertia delay is designed not to trip on a non-repeating pulse of 12 times the rated current (peak value) for duration of 8 ms. In addition, circuit protectors equipped with inertia delay do not respond to high inrush currents caused by transformer or lamp loads, but perform the specified interruption on the subsequent overcurrents. Curves EA and ED are not available with inertia delay.

Impedance and Coil Resistance (at 25°C)

Rated Current	For AC 50/60Hz Impedance (Ω)	For DC, Impedance between Terminals (Ω)
	Curves AA, BA, and EA	Curves AD, BD, and ED
0.1A	97.0	96.0
0.5A	3.2	3.1
1A	0.81	0.78
2A	0.19	0.18
3A	0.086	0.085
4A	0.051	0.050
5A	0.034	0.034
7.5A	0.017	0.016
10A	0.0092	0.0087
12.5A	0.0068	0.0065
15A	0.0052	0.0050
20A	0.0033	0.0031

Note: Tolerance: ±25% (up to 5A), ±50% (7.5A or higher)

[Voltage trip type]

	For AC 50/60Hz Impedance (Ω)	For DC, Impedance between Terminals (Ω)
100V AC	3000	—
24V DC	—	370

Note: Tolerance: ±25%

Temperature Correction Curve

The time delay curves on the preceding page are at 25°C. With reference to the following curves, time delays can be corrected according to the ambient temperature.

Operation of Auxiliary Contacts

At tripping or manual ON-OFF operation, there is a lag in time between the operation of the main contact and the auxiliary contact.

Rated Current (Trip Current) by Installation Angle

Overcurrent tripping method is hydraulic magnetic. Minimum operating currents vary with installation angle because operating currents are influenced by the weight of the iron core. With reference to the following figure, correct the rated current.

Note 1: The rated current does not change depending on the installation angle.

Note 2: The minimum operating current is calculated from the following formula:

$$(\text{Minimum operating current}) = (\text{Rated current}) \times 135\% \times (\text{Correction factor by installation angle})$$

NRBM Series Circuit Protectors

Variety of rated currents: 1A to 50A

Widely employed for protection of PC power circuits and large current circuits of welding machines.

NRBM is the largest in the rated current among the IDEC circuit protector series.

- Electromagnetic trip, not affected by ambient temperature
- Safe trip-free mechanism
- Available with auxiliary contact and alarm contact
- Available with inertia delay
- Vibration-proof design

This product is recognized by Underwriters Laboratories under UL1077 as a "Supplementary Protector."

Applicable standards	Certification Mark	Certification Organization / File No.
UL1077 CSA C22.2 No. 235		UL/c-UL File No. E68029
EN60934 (VDE0642)		No. 113434
GB17701		CCC No. 2005010307151788
Electrical Appliance and Material Safety Law Technical Standard		JET

For details, see the list of standard certified products in the back of this catalog.

Specifications

Type	NRBM
Operator	Lever type
Protection Method	Hydraulic-magnetic tripping system
Internal Circuit	Series trip (current trip) Series trip with auxiliary contacts Series trip with alarm contacts
No. of poles	1, 2, 3 poles
Rated Voltage	250V AC 50/60 Hz, 65V DC
Minimum Applied Load	24V AC/DC, 100 mA (reference value)
Rated Current	Current trip: 1A, 2A, 3A, 5A, 7.5A, 10A, 15A, 20A, 25A, 30A, 40A, 50A
Rated Interrupting Capacity	250V AC 50/60Hz, 65V DC, 1000A
Auxiliary Contact	SPDT microswitch
Alarm Contact	250V AC 5A 50V DC 1A (resistive load)
Reference Temperature	+25°C
Operating Temperature	-40 to +85°C (no freezing)
Operating Humidity	45 to 85% RH (no condensing)
Insulation Resistance	100 MΩ minimum (500V DC megger)
Dielectric Strength	2000V AC for 1 minute (between live part and ground, between terminals of different poles, between terminals of the same poles when main contacts are open, between main circuit and auxiliary contact)
Vibration Resistance	100 m/s ² (10 to 55 Hz)
Shock Resistance	1000 m/s ²
Life	10,000 operations minimum (6 operations per minute)
Terminal Style	Main terminal: M5 stud screw Auxiliary contact and alarm contact: Tab terminal #80
Weight (Approx.)	1-pole: 100g, 2-pole: 200g, 3-pole: 300g

For DC

Dimensions

Mounting Hole Layout

NRBM Series Circuit Protectors

Circuit Protector with Inertia Delay

Circuit protectors equipped with inertia delay do not trip on inrush currents caused by transformer or lamp loads, but perform the specified interruption on the subsequent overcurrents.

Note: Inertia delay is designed not to trip on a pulse of 20 times the rated current (peak value) for a duration of 8 ms. See the above curve.

Impedance and Coil Resistance (at 25°C)

20	0.0047	0.003
25	0.0032	0.0023
30	0.0031	0.0019
40	0.002	0.001
50	0.0016	0.0006

Note: Tolerance: $\pm 25\%$ (up to 20A), $\pm 50\%$ (25A or higher)

Voltage Drop due to Coil Resistance or Impedance

The internal resistance or impedance of a circuit protector tends to be larger for a smaller rated current. Therefore, when circuit protectors of a small rated current are used for a power-supply switch, voltage drop should be taken into consideration. Internal resistance also varies with time delay curves in spite of the same rated current, which should be also considered during installation.

Temperature Correction Curve

Time Delay Curve and Ambient Temperature

Since the NRBM series circuit protectors employ an electromagnetic tripping system, the rated current (trip current) is not affected by ambient temperatures, but the time delay varies with the oil viscosity in the oil dash pot. Lower oil viscosity at higher temperatures results in shorter delay, whereas at lower temperatures the delay will be prolonged.

The time delay curves on the preceding page are at 25°C. With reference to these curves, time delays can be corrected.

Instructions

Panel Mounting Screw Length

Select a proper screw length according to the table.

Panel thickness (mm)	0.8	1.0	1.2	1.4	1.6	1.8	2.0	2.3	2.6	3.2
Without washer	(4)	(4)	5	5	5	5	5	6	6	6
With plain washer (0.5 mm thick)	5	5	5	5	6	6	6	6	6	(7)
With spring washer (0.7 mm thick)	5	5	5	5	6	6	6	6	6	7
With plain washer (0.5 mm thick) and spring washer (0.7 mm thick)	6	6	6	6	6	6	6	(7)	(7)	8

Note: Avoid using screws in the parenthesized lengths whenever possible.

M3 Screw Mounting

Tightening torque: 0.5 N·m minimum
 Tightening strength: 1.1 N·m maximum

Installation Angle

Designed to be mounted on a vertical surface in principle, the circuit protector must be mounted on a surface within 10° from a vertical plane. If the circuit protector is mounted on a horizontal surface or at any angle other than specified, the characteristics will be changed.

Multi-pole Type

Multi-pole types such as 2- or 3-pole types are assembled by IDEC. Because of their characteristics, 1-pole type protectors cannot be combined to provide multi-pole types.

NRC Series Circuit Protectors

Small and high-performance **circuit protectors** with rated interrupting capacity 2500A (2-pole type: 1500A) [ Molded case circuit breaker]
Suited for FA related equipment and control panels.

- Sliding knob operator or lever operator
- Two-way mounting: DIN rail mounting or screw mounting.
- Mounting bracket is available for panel mounting.
- Easy-to-view trip indication
- Available with auxiliary contacts
- Variety of rated currents and time delay curves
- Hydraulic-magnetic tripping system and safe trip-free mechanism
- Shockproof construction to withstand shocks and vibrations

This product is recognized by Underwriters Laboratories under UL1077 as a "Supplementary Protector".

Applications

NRC series circuit protectors are small, high-performance overcurrent protectors developed for use in control circuits and small electrical equipment. Due to their ability to be re-set many times, a wide range of applications, including replacement of various fuses as in relay circuits, motor circuits, heater circuits, transformers, solenoids, solenoid valves, semiconductors, and many more.

Panels

Automatic control boards, instrumentation boards, power supply boards, electronic control boards, explosion-protected panels.

Machine Tools

Milling machines, drilling machines, grinding machines, presses, electric discharge machines.

Industrial Machines

Injection molding machines, printing presses, spinning machines, elevators, conveyors, cranes.

Chemical and Food Processing Machines

Packaging machines, stirrers, centrifuges, dryers, vacuum equipment.

Communication and Measuring Equipment

Industrial instruments, recording instruments, oscilloscopes, audio systems.

Office Machines

Computer power lines and peripheral equipment, copying machines.

Other Machines and Equipment

Medical equipment, vending machines, hairdresser's equipment, recreation and game machines.

NRC Series Circuit Protectors

Coil Resistance and Impedance (at 40°C)

Rated Current	For AC 50/60Hz Impedance (Ω)	Resistance (Ω)
0.3A	15.1	25.6
0.5A	5.58	9.04
1A	1.54	2.33
2A	0.341	0.548
3A	0.162	0.261
5A	0.061	0.099
7A	0.031	0.048
10A	0.017	0.026
15A	0.008	0.013
20A	0.0058	0.0075
30A	0.0039	0.0046

Tolerance: 0.3A to 3A ±10%
5A to 30A ±25%

Temperature Correction Curve

Voltage Drop due to Coil Resistance or Impedance

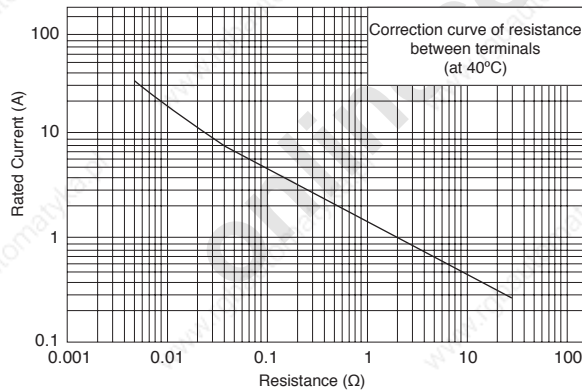

The internal resistance or impedance of circuit protector terminals tends to be larger for smaller rated currents. Therefore, when circuit protectors of small rated currents are used, voltage drop should be taken into consideration.

AC Coil Impedance between Terminals

Tolerance: 0.3A to 3A ±10%
5A to 30A ±25%

DC Coil Resistance between Terminals

Tolerance: 0.3A to 3A ±10%
5A to 30A ±25%

Wiring Example

Time Delay Curve and Ambient Temperature

Since the NRC series circuit protectors employ an electromagnetic tripping system, the rated current (trip current) is not affected by the ambient temperatures but the time delay varies with the oil viscosity in the oil dash pot. Lower oil viscosity at higher temperatures results in shorter delay, whereas at lower temperatures the delay will be prolonged.

The above time delay curves are at 40°C. With reference to these curves, time delays can be corrected.

Selection Guide

Select an appropriate circuit protector with a required delay curve and rated current in consideration of the characteristics of the circuit or equipment to be protected.

When starting an inductive load, the inrush current reaches up to over ten times the rated current. Select the rated current to prevent tripping at starting current.

Example
Solenoid rating
Rated current
0.7A
Inrush current
3A max.
Inrush time
Approx. 0.1 sec

For solenoid protection such as the above example, NRC circuit protector for the rated current 1A is suited.

For semiconductor element, the joint-use of short delay fuse for semiconductor protection is more effective.

Installation Angle

Designed to be mounted on a vertical surface in principle, the circuit protector should be mounted on a surface within 10° from a vertical plane.

If the protector is mounted on a horizontal surface or at any angle other than specified, the characteristics will be changed.

NRF Series Circuit Protectors

Snap into a 16-mm-diameter hole
Wide variety of applications such as office automation equipment

- 16-mm-dia fuse holder size
- More than 1,000 repeat operations
- Snap-on mounting
- Visible trip indicator
- Variety of rated currents
- Available with auxiliary contact which can be used to make an alarm or control circuit
- Solder or quick-connect terminations
- Round design and colorful bezels
- Mounting on 35-mm-width DIN rails is made possible by using a special adapter
- Cycling trip-free mechanism

This product is recognized by Underwriters Laboratories under UL1077 as a "Supplementary Protector."

Trip Time (at 25 °C)	• No trip at the rated current • Within 1 hour at 135% the rated current
Reset Time	60 sec minimum (Note 2)
Vibration Resistance	100 m/s ² (10 to 55 Hz)
Shock Resistance	Damage limits: 1000 m/s ² , Operating extremes: 500 m/s ²
Life	• Overcurrent durability: 1,000 operations minimum (tripping at 200% the rated current) • Mechanical life (with manual OFF mechanism): 240 operations minimum (switching at no load)
Insulation Resistance	100 MΩ minimum (500V DC megger)
Dielectric Strength	• Between main contacts and between main contact and ground: 2000V AC, 1 minute • Between main and auxiliary contacts: 1500V AC, 1 minute
Terminal Style	Main terminal: Tab terminal #250 Auxiliary contact terminal: 1.4W × 0.2mm thick solder terminal
Weight (Approx.)	15g

Note 1: The rated current is the value at the reference ambient temperature of 25°C, and varies with the operating temperature. The rated current can be corrected according to the temperature correction curve.

Note 2: Reset time is the value at the reference ambient temperature of 25°C.

Applications

NRF series circuit protectors are small, high-performance overcurrent protectors developed for use in control circuits and small electrical equipment. Because they can be easily reset, they are suited for use in relay circuits, motor circuits, heater circuits, transformers, solenoids, solenoid valves, semiconductor circuits, and many other applications.

[Application Examples]

• Office Automation Equipment

Copiers, shredders, personal computers, word processors, fax machines, printers, computer terminals, communication equipment, and power supplies.

• Measuring Instruments

Electrical measuring instruments, industrial meters, analyzers, recorders, data processors, test equipment, and chemical equipment

• Industrial Machines

CNC equipment, robots, molding machines, processing machines, packaging machines, and carriers

• Business machines

Medical equipment, vending machines, hairdresser's equipment, recreation and game machines, and small printing machines

• Electric Controller and Instrumentation Equipment

Automatic control devices, electronic equipment, and instrumentation boards

Time Delay Curves

Note: Dashed lines are reference values.

Rated Current vs Internal Resistance

Rated Current	Internal Resistance (Ω) $\pm 1\%$	
0.3A	9.08	at 25°C
0.5A	3.27	
1A	0.81	
2A	0.235	
3A	0.0922	
5A	0.0503	
8A	0.0085	
10A	0.0095	
15A	0.0064	

The internal resistance tends to be larger for smaller rated currents. When the circuit protector is used in a low-voltage circuit, voltage drop should be taken into consideration.

Temperature Correction Curve

The rated current is based on an ambient temperature of 25°C. Since a thermal tripping method is employed, the rated current should be corrected according to the ambient temperature with reference to the curves shown below.

Dimensions

Mounting Hole

* Chamfering on the front edge of the mounting hole is recommended for easy insertion.

Accessories (optional)

• 35-mm-wide DIN Rail Mount Adapter

Type No.	Ordering Type No.	Package Quantity
NRF-D	NRF-DPN05	5

• Surface Mount Adapter

Type No.	Ordering Type No.	Package Quantity
NRF-M	NRF-MPN10	10

All dimension in mm.

Instructions

- Since the NRF is designed for protection against overload, it should be used within the rated interrupting capacity. An excessive overcurrent may affect the bimetal characteristics or damage the internal mechanism.
- After tripping, the NRF cannot be reset until the bimetal cools down. Allow the NRF at least 60 seconds before resetting. When the NRF is used at an ambient temperature higher than the reference temperature, resetting sometimes fails even after 60 seconds because it takes a long time to cool down the bimetal.
- The NRF may not trip at an instantaneous overcurrent due to its principle.
- The NRF is shipped in the ON status. To confirm operation of the models without manual OFF mechanism, apply approximately 200% the rated current to trip the NRF.
- When installing quick connect receptacles to the terminals, hold the NRF body and press it into the quick connect receptacles.
- Unlike conventional switches, the models with manual OFF mechanism are not suited for frequent switching due to their construction. (Their mechanical life is 240 operations at minimum when switching at no load.)
- The models with manual OFF mechanism should be operated without load.

NRP Series PC Board Circuit Protectors

Higher economic efficiency than fuses

SIL type subminiature circuit protectors adopting IC terminal arrangements, and mountable directly on PC boards. Simple construction and high performance applying a positive load reversing mechanism by IDEC's original design. Unlike fuses, the thermal trip mode (bimetal type) eliminates erroneous interruption due to inrush currents. Rated current can be selected to meet the load. Circuits with high inrush currents can be protected against overloads (unlike fuses).

Reusable 200 operations (tripping at 200% the rated current) with higher economic efficiency, and less maintenance than fuses.

Available in slim and flat types. Slim types (can be mounted on PC boards by using pick and place machines)

Available in non-sealed and sealed types. With the sealed type, cleaning after soldering is possible.

With a manual OFF mechanism, convenient for circuit checkups

This product is recognized by Underwriters Laboratories under UL1077 as a "Supplementary Protector."

Applicable Standard	Certification Mark	Certification Organization File No.
UL1077		UL File No. E68029
CSA C22.2 No. 235		No. LR65560

For details, see the list of standard certified products in the back of this catalog.

Types

Specify a rated current in place of □.

Type	Appearance	Type No.	Ordering Type No.	□ Rated Current	Contact	Internal Circuit (Note)	Package Quantity	
NRPS (Slim Type)	Non-sealed		NRPS10-□	NRPS10-□PN10	1A, 1.6A, 2A, 3.15A, 4A, 5A, 6A	1NC		10
	Sealed (Tape-sealed)		NRPS10-G□	NRPS10-G□PN10	1A, 1.6A, 2A, 3.15A, 4A, 5A, 6A	1NC		10
NRPF (Flat Type)	Non-sealed		NRPF10-□	NRPF10-□PN10	1A, 1.6A, 2A, 3.15A, 4A, 5A, 6A	1NC		10
	Sealed (Tape-sealed)		NRPF10-G□	NRPF10-G□PN10	1A, 1.6A, 2A, 3.15A, 4A, 5A, 6A	1NC		10
NRPS (Slim Type)	Non-sealed		NRPS11-□	NRPS11-□PN10	1A, 1.6A, 2A, 3.15A, 4A, 5A, 6A	SPDT		10
	Sealed (Tape-sealed)		NRPS11-G□	NRPS11-G□PN10	1A, 1.6A, 2A, 3.15A, 4A, 5A, 6A	SPDT		10
NRPF (Flat Type)	Non-sealed		NRPF11-□	NRPF11-□PN10	1A, 1.6A, 2A, 3.15A, 4A, 5A, 6A	SPDT		10
	Sealed (Tape-sealed)		NRPF11-G□	NRPF11-G□PN10	1A, 1.6A, 2A, 3.15A, 4A, 5A, 6A	SPDT		10

Note: Terminal © on 1NC contact type is provided for firm mounting on printed-circuit boards, without internal connections.

Ordering Information

When ordering, select appropriate circuit protectors in consideration of the soldering method and necessity of cleaning.

NRP Series PC Board Circuit Protectors

Selection Guide - Select appropriate circuit protectors (marked with X in the table below) according to your application.

Applications	Flat Type			
	Non-sealed	Sealed	Non-sealed	Sealed
	NRPS10-□ NRPS11-□	NRPS10-G □ NRPS11-G □	NRPF10-□ NRPF11-□	NRPF10-G □ NRPF11-G □
Manual soldering	X	X	X	X
Dip soldering	—	X	—	X
Cleaning after soldering	—	X	—	X
Automatic mounting on PC boards	X	X	—	—

Note: The sealed type is provided with epoxy-seal on the base and a tape seal on the actuator side. After cleaning, be sure to remove the tape seal.

When using flux, use rosin flux. Select the sealed type irrespective of cleaning necessity.

Specifications

Protection Method	Thermal tripping
Internal Circuit	Series Trip
No. of Poles	1 pole
Rated Voltage	250V AC (50/60Hz), 32V DC
Rated Current	1A, 1.6A, 2A, 3.15A, 4A, 5A, 6A
Rated Interrupting Capacity	1 to 4A: Rated current x 10 (resistive load) 5 and 6A: 250V AC/40A, 32V DC/40A (resistive load)
Minimum Applicable Load	5V AC/DC 100 mA (reference value)
Reference Temperature	25°C
Operating Temperature (Note)	-10 to +50°C (no freezing)
Operating Humidity	45 to 85% RH (no condensation)
Storage Ambient Temperature	-30°C to +70°C (no freezing)
Storage Ambient Humidity	45 to 85% RH (no condensation)
Vibration Resistance	100 m/sec ² (10 to 55 Hz)
Shock Resistance	Damage limits: 1000 m/s ² Operating extremes: 500 m/s ²
Life	200 operations (tripping at 200% the rated current)
Insulation Resistance	100 MΩ minimum (500V DC megger)
Dielectric Strength	1500V AC (50/60Hz), 1 minute (between terminals of the same pole when main contacts are open, and between live parts and ground)
Initial contact	Between terminals ① and ②: 200 mΩ maximum (5V DC • 1A) Between terminals ② and ③: 100 mΩ maximum (5V DC • 100mA)
Weight (Approx.)	2g

Note: The rated current is the value at the reference ambient temperature of 25°C, and varies with operating temperature. The rated current can be corrected according to the Temperature Correction Curve.

Time Delay Curves

Temperature Correction Curve

The rated current is based on an ambient temperature of 25°C. Since a thermal tripping method is employed, the rated current should be corrected according to the ambient temperature with reference to the curve shown below.

Overcurrent - Time Delay Characteristics (sec at 25°C)

Percent of Rated Current	100%	175%	200%	400%	600%	800%	1000%
Time Delay	No Trip	2.2-120	1.2-40	0.24-2.2	0.1-1	0.06-0.7	0.04-0.5

Applications of NRPS/NRPF Circuit Protectors

The NRPS/NRPF series circuit protectors are ideal for use on printed-circuit boards in small electric appliances to protect power transformers, rectifiers, small-motors, solenoid valves, and solenoids from overloads. In addition to higher economic efficiency than that of fuses, the capability of over 200 repeated uses will find a wide range of applications in place of various fuses.

Applications Examples

- Office Automation Equipment:** Copiers, Shredders, Fax machines, Machine tools, Hydraulic devices, Robots, etc.
- Measuring equipment:** Testers, Oscilloscopes, etc.
- Communication Equipment:** Transmitter/Receiver, Telephone Exchanger
- Power Supplies:** Switching Power Supplies, Small Generators

Safety Precautions

onlinecomponents.com
THE ONLINE DISTRIBUTOR OF ELECTRONIC COMPONENTS

1. Soldering

- (1) • Soldering to the printed-circuit boards
Soldering should be done quickly referring to the conditions below. If the terminals are heated excessively, the bimetal may trip.
 - Manual soldering
For manual soldering, complete soldering with a 60W soldering iron (soldering tip temp.: 350°C) quickly within 3 seconds. (When lead-free soldering is used, Sn-Ag-Cu is recommended.)
During soldering, keep the soldering iron away from the plastic housing of the circuit protector, and apply no external force by bending the terminal or pulling the wires.
(Check your actual soldering conditions before soldering.)
 - Dip soldering
Dipping temperature: 260°C
Dipping duration: 5 seconds maximum
- (2) Do not solder the sealed type in a flow soldering bath. Since preheating process weakens the viscosity of the tape seal on the actuator due to the air expansion inside NRPS and the NRPF, air-tightness is possibly lowered.
- (3) For the non-sealed type, perform manual soldering. Do not use the water-soluble flux because it runs into the unit and it causes malfunctions.
- (4) Non-corrosive rosin flux is recommended because washing is not required.

2. Washing

- (1) When there is a possibility of washing, select the seal type.
- (2) Washing should be done at 60°C maximum within 30 seconds (and 50mm depth for full washing). Avoid steam washing. Use pure water as a cleaning solvent. When an organic solvent is used, use of alcohol is recommended. Before using other organic solvents, make sure that after actual washing, the tape seal is not removed and sealant or housing material is not affected.
- (3) The base of sealed type is provided with epoxy resin sealing and a tape seal covers the actuator. After cleaning, be sure to remove the tape from the actuator before use.

3. Notes for Bimetal

- (1) Storage temperature should not exceed 70°C. If storage temperature exceeds 70°C, the bimetal may trip.
- (2) Applied current should be under the rated current for the normal use. The rated current should be corrected according to the ambient temperature chart due to bimetal characteristics.
- (3) Since the NRPS and NRPF are designed for protection against overloads, they should be used within the rated interrupting capacity. An excessive overcurrent may affect the bimetal characteristics or damage the internal mechanism.
- (4) Note that the NRPS and NRPF do not respond to overcurrent for a period of few tens to few hundreds msec.

4. Manual OFF Mechanism

Manual OFF mechanism is performed by slightly pulling the white pin at the top of the unit with tweezers.

5. Other Notes

- (1) Make sure that no load (current) is applied before resetting manually turning the circuit OFF with actuator operation. In addition, avoid frequent opening and closing of the actuator at no load (current is not applied).
- (2) Turn power off and allow at least 60 seconds before rethrowing (at reference ambient temperature of 25°C). Reset the protector with no load. Do not press the actuator with something sharp, otherwise the internal part may be damaged.
- (3) Do not hold the actuator depressed while an overcurrent is present, because the overcurrent may damage the circuit protectors.
