EX-Z SERIES

Ultra-minute Photoelectric Sensor **Amplifier Built-in**

The World's Smallest* Size

* Among photoelectric sensors with built-in amplifier, as of June 2015 (survey by our company)

Unit volume ratio reduced by about 50%*

* As compared to EX-10 series

The world's thinnest* sensor dimension of 3 mm **0.118 in** has been achieved by utilizing new semiconductor packaging technology that does not use wire bonding. The small unit size allows installation of sensors in a narrow space where only a conventional fiber sensor head could be installed before. The built-in amplifier also saves on installation space.

Small-object sensing capability

Capable of sensing an extremely small ø0.3 mm **ø0.012 in** object without slit **EX-Z11□**

A slit is provided on the front side of the main sensor body. The sensor can detect a ø0.3 mm **ø0.012 in** object (the smallest-object sensing capability in the industry*) without using an optional slit.

Sensing of end of thin pipe

Capability to sense a small ø1.0 mm **ø0.039 in** object over long distance **EX-Z13□**

The high-brightness 4-element red LED provides strong light emission stably over a long period of time. In spite of the extremely small size, both front sensing and side sensing units can sense a small ø1.0 mm **ø0.039 in** object from a long distance of 500 mm **19.685 in**. Since the spotlight is clearly visible, the sensing position can be easily confirmed.
