MS (Manganese Silicon) lithium rechargeable batteries, developed by SII, use silicon oxide as the anode and a lithium manganese composite oxide as the cathode. As a result, they offer long cycle life and highly stable overdischarge characteristics.

FEATURES

- **Large discharge capacity :**
For high operational voltage range of 3.3V to 2.0V.
- **Long cycle life :**
Cycle life of over 100 cycles (over 50 cycles for MS414GE) under charge/discharge conditions of 3.1V to 2.0V (D.O.D.100%).
- **Excellent overdischarge characteristics :**
Continued stable capacity characteristics even after the battery is overdischarged down to 0.0V.
- **Operation over a wide temperature range:**
Operating temperature range : -20°C to +60°C
Consult us for using the battery at a temperature beyond the above temperature range.
- **RoHS Compliant**
- **Approved by UL (Underwriters Laboratories Inc.)**
UL File No. MH15628

APPLICATIONS

Backup power for Real Time Clock, or memory.
E.g. Security Camera, Digital Camera, Action Camera, GPS equipments, Event Data Recorder, Handy Terminal, PC, Smart phone.

*1. Nominal capacity: Typical value of discharge capacity between 3.1V and 2.0V

*2. Internal impedance is measured using an AC (Alternating Current) method at the fully charged state.

*3. Maximum discharge current indicates the value of a current for approximately 50% of the nominal capacity.

*4. Cycle Life indicates the times charge/discharge is repeated for approximately 50% of the capacity values in the specification sheet.

*5. 100% and 20% are based on nominal capacity.

*6. A constant voltage charge is recommended, but due to a limit in charge current, it is necessary to insert a resistor to regulate the charge current.

Please see Page 7 for resistor value. Contact us for further details.

If a constant current charge is required, contact us for more information.

⚠ CAUTION

MS Lithium Rechargeable Batteries are not reflowable. Please mount them on PCB by hand soldering.
