

Our smallest sensor.

F 10 laser sensors in a subminiature design.

Small but powerful.

The smallest laser sensor with adjustable background suppression.

*Mini sensor with maximum user comfort:
A comfortable start-up with electronic
teach and clearly visible status LEDs
– not to be taken for granted in
this sensor size.*

FT 10 BGS – THE FLAGSHIP

- Subminiature sensor with laser light and adjustable background suppression
- Detection range up to 60 mm
- Precise and reliable switching performance even on changing object surfaces and colours
- Teach-in
- Bright or shiny background machine parts do not affect the switching performance
