

Bipolar Hall-Effect Digital Position Sensor ICs: SS41, SS41-L, SS41-T2, SS41-T3, SS41-S, SS41-SP

32312814

Issue B

Datasheet

DESCRIPTION

These small and versatile digital Hall-effect devices are operated by the magnetic field from a permanent magnet or an electromagnet, and are designed to respond to alternating North and South poles. The built-in regulator provides enhanced stability of operation from 4.5 Vdc to 24 Vdc supply voltage range, and internal circuitry is designed to prevent sensor damage in case the supply voltage polarity is accidentally reversed. The open-collector sinking output voltage is easily interfaced with a wide variety of electronic circuits. The SS41 is tested at both 25°C [77°F] and 125°C [257°F]. For design flexibility, these product are available in the following flat TO-92 package styles:

- **SS41:** Straight standard leads, bulk pack
- **SS41-L:** Straight long leads, bulk pack
- **SS41-T2:** Formed leads, ammpack tape-in-box
- **SS41-T3:** Straight standard leads, ammpack tape-in-box
- **SS41-S:** Surface mount, bulk pack
- **SS41-SP:** Surface mount, pocket tape and reel

FEATURES

- Small, leaded, flat TO-92-style package allows for a compact PCB layout
- Wide operating voltage range of 4.5 Vdc to 24 Vdc allows these sensors to be used in a variety of applications
- Current consumption of only 5 mA max. at 4.5 Vdc for energy efficiency
- Bipolar magnetics for ring magnet applications with alternating North and South poles
- Robust design: Will operate up to 150°C [302°F]
- RoHS-compliant materials meet Directive 2002/95/EC

POTENTIAL APPLICATIONS

- **Industrial:** Speed and RPM (revolutions per minute) sensing, tachometer, counter pickup, flow-rate sensing, brushless dc (direct current) motor commutation, motor and fan control, robotics control
- **Transportation:** Speed and RPM (revolutions per minute) sensing, tachometer, counter pickup, motor and fan control, electric window lift, convertible roof position
- **Medical:** Motor assemblies, medication dispensing control

PORTFOLIO

Other bipolar digital position sensor ICs include:

- SS400 Series, SS500 Series (selected catalog listings)
- SS311PT, SS411P
- SS40F, SS40AF
- SS51T
- SS30AT, SS40A, SS50AT

Bipolar Hall-Effect Digital Position Sensor ICs:

SS41, SS41-L, SS41-T2, SS41-T3, SS41-S, SS41-SP

Table 2. Performance Specifications

(At $V_{\text{supply}} = 4.5 \text{ Vdc}$ to 24.0 Vdc , 20 mA load, $T_A = -40^\circ\text{C}$ to 150°C [-40°F to 302°F] except where otherwise specified.)

Characteristic	Condition	Min.	Typ.	Max.	Unit
Supply voltage	—	4.5	—	24.0	V
Supply current:	$V_s = 24.0 \text{ V}$ $V_s = 24.0 \text{ V}$	—	—	10.0	mA
output on		—	—	11.3	
output off	—	—	—	20.0	mA
Output current	—	—	—	20.0	mA
V_{sat}	$B_{\text{op}} > 170, 25^\circ\text{C}$ [77°F]	—	—	0.4	V
Output leakage current	$B_{\text{rp}} > 170, 25^\circ\text{C}$ [77°F], 24 V	—	—	10.0	μA
Rise time (10% to 90%)	25°C [77°F]	—	—	1.5	μs
Fall time (90% to 10%)	25°C [77°F]	—	—	1.5	μs
Operating temperature	—	-40 [-40]	—	150 [302]	$^\circ\text{C}$ [$^\circ\text{F}$]
Storage temperature	—	-40 [-40]	—	150 [302]	$^\circ\text{C}$ [$^\circ\text{F}$]
ESD (Human Body Model)	per JEDEC JS-001 kV	-3	—	+3	kV
Soldering temperature and time	PC board wave soldering process: 250°C to 260°C [482°F to 500°F] for 3 s max.				

Table 3. Magnetic Characteristics

Characteristic	Temperature					
	-40°C [-40°F]	0°C [32°F]	25°C [77°F]	85°C [185°F]	125°C [257°F]	150°C [302°F]
Operate maximum	200 G	150 G	150 G	150 G	200 G	250 G
Release minimum	-160 G	-160 G	-140 G	-150 G	-200 G	-250 G
Differential minimum	40 G	50 G	50 G	50 G	60 G	60 G

NOTICE

These Hall-effect sensor ICs may have an initial output in either the ON or OFF state if powered up with an applied magnetic field in the differential zone (applied magnetic field $> B_{\text{rp}}$ and $< B_{\text{op}}$). Honeywell recommends allowing 10 μs after supply voltage has reached 5 V for the output voltage to stabilize.

NOTICE

The magnetic field strength (Gauss) required to cause the switch to change state (operate and release) will be as specified in the magnetic characteristics. To test the switch against the specified limits, the switch must be placed in a uniform magnetic field.

Table 3. Absolute Maximum Specifications

Characteristic	Min.	Typ.	Max.	Unit
Supply voltage	-50.0	—	50.0	V
Applied output voltage	-0.5	—	50.0	V
Output current	—	—	20	mA
Magnetic flux	—	—	no limit	Gauss

NOTICE

Absolute maximum ratings are the extreme limits the device will momentarily withstand without damage to the device. Electrical and mechanical characteristics are not guaranteed if the rated voltage and/or currents are exceeded, nor will the device necessarily operate at absolute maximum ratings.
