

MP Motion Sensor (AMN2, 3, 4)

3. Electrical characteristics (Measuring condition: ambient temp. = 25°C 77°F; operating voltage = 5V) (Common to All types)

1) Digital output

Items		Symbol	Specified value		Measured conditions
			Standard type	Low current consumption type	
Rated operating voltage	Minimum	Vdd	3.0 V DC	2.2 V DC	
	Typical		—	—	
	Maximum		6.0 V DC	3.0 V DC	
Rated consumption current (Standby)* ^{Remark}	Typical	Iw	170 µA	46 µA	Iout = 0
	Maximum		300 µA	60 µA	
Output (when detecting)	Current	Iout	100 µA	100 µA	Vout ≥ Vdd-0.5
	Voltage	Vout	Vdd -0.5	Vdd -0.5	Open when not detecting
Circuit stability time	Typical	Twu	7 s	7 s	
	Maximum		30 s	30 s	

Remark: The current which is consumed during detection consists of the standby consumed current plus the output current.

2) Analog output

Items		Symbol	Specified value	Measured conditions
Rated operating voltage	Minimum	Vdd	4.5 V DC	
	Maximum		5.5 V DC	
Rated consumption current	Typical	Iw	0.17 mA	Iout = 0
	Maximum		0.3 mA	
Output current	Maximum	Iout	50 µA	
Output voltage	Minimum	Vout	0 V	
	Typical		2.5 V	
	Maximum		Vdd	
Output offset average voltage	Minimum	Voff	2.3 V	Steady-state output voltage when not detecting
	Typical		2.5 V	
	Maximum		2.7 V	
Steady-state noise	Typical	Vn	155 m Vp-p	
	Maximum		300 m Vp-p	
Circuit stability time	Maximum	Twu	45 s	

Note: To set to the same detection performance as the digital type, set the output voltage to the offset voltage (2.5V) ±0.45V (i.e. 2.95V or more and 2.05V or less).

[Timing chart]

1) Digital output

Remark:

Circuit stability time: 30s max.

While the circuitry is stabilizing after the power is turned on, the sensor output is not fixed in the "on" state or "off" state. This is true regardless of whether or not the sensor has detected anything.

2) Analog output

Remark:

Circuit stability time: 45s max.

While the circuitry is stabilizing after the power is turned on, the sensor output is not fixed in the "on" state or "off" state. This is true regardless of whether or not the sensor has detected anything.

MP Motion Sensor (AMN2, 3, 4)

DETECTION PERFORMANCE

1. Standard detection type

- Remarks:
1. The X-Y cross-sectional diagram shows the detection area.
 2. The differences in the detection zone patterns are indicative of the projections of the 16 lenses with single focal point and with five optical axes. An object whose temperature differs from the background temperature and which crosses inside the detection zone will be detected.

2. Slight motion detection type

- Remarks:
1. The X-Y cross-sectional diagram shows the detection area.
 2. The differences in the detection zone patterns are indicative of the projections of the 26 lenses with single focal point and with three optical axes. An object whose

temperature differs from the background temperature and which crosses inside the detection zone will be detected.
