PNP output type available

The next-generation new form series A new alternative to fiber sensors

Simpler design

All you need to do is to make a $\varnothing 4$ mm $\varnothing 0.157$ in hole where you would like to stop or check the object ($\varnothing 6$ mm $\varnothing 0.236$ in hole for reflective type). Furthermore, the center of the sensing axis is the same as the center of the mounting hole, which makes it much easier to set the sensing position.

New design solves all weak points of fiber sensors

The EX-30 series solves all of the difficulties associated with fiber sensors, such as:

- Difficulty finding a suitable place for the amplifier
- Fragility of the fiber
- Extra space needed because of difficulty in bending the fiber
- The nuisance of having to use a protective tube to prevent fiber breakage

BASIC PERFORMANCE

Electric power saving*

The EX-30 series achieves reductions in power consumption of up to 65%. These sensors contribute to environmental friendliness.

Long sensing range

The EX-30 series achieves long distance sensing [thru-beam type: 500 mm **19.685 in** (EX-33(-PN): 800 mm **31.496 in**), reflective type: 50 mm **1.969 in**.]

Globally usable

It conforms to the EMC Directive and obtains the UL Recognition. (excluding 5 m **16.405 ft** cable length type) Moreover, PNP output type which is much in demand in Europe, is also available.

High response speed of 0.5 ms

The same high response speed of 0.5 ms as fiber sensor amplifiers is provided, making these sensors ideal for sensing small objects, counting objects that are moving quickly and positioning items such as circuit boards.

APPLICATIONS

Detecting IC height

Detecting quantity of labels in label magazine

Checking IC pins (using slit masks)

VARIETIES

New thru-beam types now feature operation mode switch and sensitivity adjuster! **EX-33(-PN)**

EX-33(-PN)

- ① Operation mode switch
- ② Sensitivity adjuster
- ③ Bright 2-color indicator

Switching between light-ON and dark-ON operating modes is possible with a single model.

It is convenient when you need fine adjustment.

A bright 2-color indicator has been incorporated in all types.

MOUNTING / SIZE

Can be installed in the same way as standard fibers

The EX-30 series can be screwmounted (M4 for thru-beam type, M6 for reflective type) in the same way as standard fiber sensors. This means that they can be inserted into production lines in exactly the same way as conventional high-priced fiber sensors.

Single-point tightening cuts down on installation work by half

Conventional photoelectric sensors required four (for thru-beam type) or two (for reflective type) mounting holes and screws to be used. However, the EX-30 series is installed with a single screw, thus cutting down on installation work by half.

M4 ▶
Thru-beam type
(Reflective type: M6)

Conventional model

EX-30

Takes up very little space

Unlike conventional fibers, bending radius is not a problem, so that the sensor can be securely installed alongside conveyors.
