

SLG Liquid Flow Meter Series

Ultra-High Pressure Flow Meter for LC Applications

- Ultra-low Flow Sensing in the nl/min Range
- Operating Pressure up to 1200 bar (17500 psi)
- 40 ms Response Time

Product Summary

The SLG Liquid Flow Meter enables precise, bi-directional measurements of dynamic liquid flow rates in the nl/min to low µl/min range. This device has been designed for ultrahigh pressure applications in Liquid Chromatography Systems (UHPLC). Excellent bio-compatibility and chemical resistance is ensured by the use of fused silica, stainless steel and PEEK for all wetted parts.

Interface Options

Digital Analog

- I²C-Bus
- RS485-Bus
- USB Cable
- Voltage Output (0-10 V)
- Additional operation modes

1.1 Precision/Extended Mode with the SLG-0075

The SLG-0075 is offering two different flow sensing modes. The Precision Mode allows for precise flow sensing starting at zero flow while the Extended Mode is made for a rough estimation of the current mass flow in higher flow ranges. The Precision Mode is fully bi-directional with continuous output at and around zero. The Extended Mode is uni-directional (positive flow direction only), and sensor output is restricted to the flow range between 2000 nl/min to 22000 nl/min. The calibration for each mode is stored on a separate calibration field (CF):

Calibration field 0: Precision Mode (default)

Calibration field 1: Extended Mode

For switching between the two modes of operation the internal calibration field has to be selected accordingly. This can be done either by using the Sensirion USB/RS485 Viewer Software or by specific digital commands (see additional documentation, available on request for either I²C or RS485 communication).
