## Circuit Diagrams

## Terminal Circuit Diagrams (bottom view)

1. 3 position switch: 2 contacts, terminal no. = between NO1-C1, between NO2-C2
2. Use between NO-C for OFF $\rightarrow$ On $\rightarrow$ OFF 3 position switch (NC is not used).

3. Recommended Lock Nut Torque: 0.68 to $0.88 \mathrm{~N} \cdot \mathrm{~m}$.
4. Use a lock nut tool to screw on the lock nut (see page B-47).
5. To retain the switches waterproof performance, do not penetrate the positioning hole.
6. Remove the rubber cover projection if you do not want a positioning hole. (Do not penetrate the rubber cover).

## General Information for Enabling Switches

## Safety Precautions

- In order to avoid electric shock or fire, turn power off before installation, removal, wire connection, maintenance or inspection of switch.
- Follow specification when installing. Improper electrical load may damage switch, cause electric shock, or fire.

## Installation Precautions

## HE2B

- M3 nut is inside the rubber cover.

## HE2B/HE3B

- A change in internal air pressure may cause the rubber boot to expand and shrink on an enabling switch that has the rubber boot sealed. This may affect the performance of the switch. Periodically check to ensure that the enabling switch is operating correctly.
- Use proper wire diameter to meet voltage and current requirements. Using improper wires or incomplete soldering may cause fire due to abnormal heat generation.

## Wiring Precautions

## HE1B/HE2B/HE3B

- Applicable wire size is 0.5 mm (maximum) / 1 line.
- When soldering the terminal, solder at a temperature of $260^{\circ} \mathrm{C}$ within 3 seconds. Use non-corrosive liquid rosin as soldering flux.

## HE1G

- Wire Striping Information

| Wire Length | Terminal No. 1-4 | Terminal No. 5-8 |
| :--- | :--- | :--- |
| $\mathrm{L} 1, \mathrm{~L} 2(\mathrm{~mm})$ | $\mathrm{L} 1=40 \mathrm{~mm}$ | $\mathrm{~L} 2=27 \mathrm{~mm}$ |
| $\mathrm{~L} 3(\mathrm{~mm})$ | $\mathrm{L} 3=6 \mathrm{~mm}$ |  |
|  |  |  |
|  |  |  |

- Applicable Wire Size:0.14 to $1.5 \mathrm{~mm}^{2}$ (one wire per terminal)

- If the panel is not level when mounting an enabling switch, the waterproof feature cannot be guaranteed.

## HE3B

- The rubber boot has a tab to be used for orientation. When making a positioning hole in a panel, do not make a hole in the rubber boot, or the waterproof feature cannot be guaranteed. When the positioning hole in not on the panel, remove the tab, but do not make a hole in the rubber boot.
- When tightening the locking ring, secure the flange to prevent the enabling switch from rotating. In applications where the enabling switch is to be rotated, mount the switch in a recess on the panel as shown.

- Recommended Torque (wire diameter range.276-.512")

## Use Precautions

## HE2B/HE3B/HE1G

- To ensure the highest level of reliability connect both contacts to a monitoring device such as a safety relay.

## HE1B/HE2B/HE3B

- When installing the enabling switch ensure that it cannot be accidently activated. For example, a protrusion from a teaching pendant could cause the enabling switch to be activated by the weight of the teaching pendant.
