# MITSUBISHI <br> ELECTRIC <br> TRANSISTORIZED INVERTER <br> FR-S500 INSTRUCTION MANUAL (Detailed) 

SIMPLE INVERTER FR.S54OE-0.4K to 3.7K-EC FR.S520SE-0.2K to 0.5 SK -EC

FUNCTIONS Chapter 2

PROTECTIVE FUNCTIONS

Chapter 3

SPECIFICATIONS Chapter 4

Thank you for choosing this Mitsubishi Transistorized inverter.
This instruction manual (detailed) provides instructions for advanced use of the FRS500 series inverters.
Incorrect handling might cause an unexpected fault. Before using the inverter, always read this instruction manual and the instruction manual (basic) [IB-0600210ENG] packed with the product carefully to use the equipment to its optimum.

## This section is specifically about safety matters

Do not attempt to install, operate, maintain or inspect the inverter until you have read through this instruction manual (basic) and appended documents carefully and can use the equipment correctly. Do not use the inverter until you have a full knowledge of the equipment, safety information and instructions.
In this instruction manual (detailed), the safety instruction levels are classified into "WARNING" and "CAUTION".
$\triangle$ WARNING
Assumes that incorrect handling may cause hazardous conditions, resulting in death or severe injury.

## $\triangle$ CAUTION

Assumes that incorrect handling may cause hazardous conditions, resulting in medium or slight injury, or may cause physical damage only.
Note that even the $\triangle$ CAUTION level may lead to a serious consequence according to conditions. Please follow the instructions of both levels because they are important to personnel safety.

## 1. Electric Shock Prevention

## AWARNING

- While power is on or when the inverter is running, do not open the front cover. You may get an electric shock.
- Do not run the inverter with the front cover or wiring cover removed. Otherwise, you may access the exposed high-voltage terminals or the charging part of the circuitry and get an electric shock. Also, the inverter's ability to withstand earthquakes will deteriorate.
- Even if power is off, do not remove the front cover except for wiring or periodic inspection. You may access the charged inverter circuits and get an electric shock.
- Before starting wiring or inspection, check to make sure that the 3-digit LED inverter monitor is off, wait for at least 10 minutes after the power supply has been switched off, and check to make sure that there are no residual voltage using a tester or the like.
- This inverter must be earthed. Earthing must conform to the requirements of national and local safety regulations and electrical codes. (JIS, NEC section 250, IEC 536 class 1 and other applicable standards)
- Any person who is involved in the wiring or inspection of this equipment should be fully competent to do the work.
- Always install the inverter before wiring. Otherwise, you may get an electric shock or be injured.
- Perform setting dial and key operations with dry hands to prevent an electric shock.
- Do not subject the cables to scratches, excessive stress, heavy loads or pinching. Otherwise, you may get an electric shock.
- Do not change the cooling fan while power is on. It is dangerous to change the cooling fan while power is on.
- When you have removed the front cover, do not touch the connector above the 3digit monitor LED display. Otherwise, you get an electrick shock.

## 2. Fire Prevention

## ACAUTION

- Mount the inverter on an incombustible surface. Installing the inverter directly on or near a combustible surface could lead to a fire.
- If the inverter has become faulty, switch off the inverter power. A continuous flow of large current could cause a fire.
- Do not connect a resistor directly to the DC terminals,+- . This could cause a fire.

## 3. Injury Prevention

## $\triangle$ CAUTION

- Apply only the voltage specified in the instruction manual to each terminal to prevent damage, etc.
- Always connect to the correct terminal to prevent damage, etc.
- Always make sure that polarity is correct to prevent damage, etc.
- While power is on or for some time after power-off, do not touch the inverter as it is hot and you may get burnt.

## 4. Additional Instructions

Also note the following points to prevent an accidental failure, injury, electric shock, etc.
(1) Transportation and installation

## $\triangle$ CAUTION

- When carrying products, use correct lifting gear to prevent injury.
- Do not stack the inverter boxes higher than the number recommended.
- Ensure that installation position and material can withstand the weight of the inverter. Install according to the information in the instruction manual.
- Do not install or operate if the inverter is damaged or has parts missing.
- When carrying the inverter, do not hold it by the front cover or setting dial; it may fall off or fail.
- Do not stand or rest heavy objects on the inverter.
- Check the inverter mounting orientation is correct.
- Prevent other conductive bodies as screws and metal fragments or other flammable substance as oil from entering the inverter.
- As the inverter is a precision instrument, do not drop or subject it to impact.
- Use the inverter under the following environmental conditions: This could cause the inverter damage.

|  | Ambient <br> Temperature | $-10^{\circ} \mathrm{C}$ to $+50^{\circ} \mathrm{C}$ (non-freezing) |
| :---: | :---: | :---: |
|  | Ambient humidity | 90\%RH maximum (non-condensing) |
|  | Storage temperature | $-20^{\circ} \mathrm{C}$ to $+65^{\circ} \mathrm{C}$ * |
| - | Atmosphere | Indoors (free from corrosive gas, flammable gas, oil mist, dust and dirt) |
|  | Altitude/ vibration | Maximum 1000m above sea level for standard operation. After that derate by $3 \%$ for every extra 500 m up to 2500 m ( $91 \%$ ). $5.9 \mathrm{~m} / \mathrm{s}^{2}$ or less (conforming to JIS C 60068-2-6) |

*Temperatures applicable for a short time, e.g. in transit.

## $\triangle$ CAUTION

- Do not fit capacitive equipment such as power factor correction capacitor, radio noise filter (option FR-BIF(-H)) or surge suppressor to the output of the inverter.
- The connection orientation of the output cables $\mathrm{U}, \mathrm{V}, \mathrm{W}$ to the motor will affect the direction of rotation of the motor.

## (3) Trial run

## $\triangle$ CAUTION

- Check all parameters, and ensure that the machine will not be damaged by a sudden start-up.
- When the load $\mathrm{GD}^{2}$ is small (at the motor GD or smaller) for 400 V from 1.5 K to 3.7 K , the output current may vary when the output frequency is in the 20 Hz to 30 Hz range.
If this is a problem, set the Pr. 72 "PWM frequency selection" to 6 kHz or higher. (When setting the PWM to a higher frequency, check for noise or leakage current problem and take countermeasures against it.)
(4) Operation

## $\triangle$ WARNING

- When you have chosen the retry function, stay away from the equipment as it will restart suddenly after an alarm stop.
- The [STOP] key is valid only when the appropriate function setting has been made. Prepare an emergency stop switch separately.
- Make sure that the start signal is off before resetting the inverter alarm. A failure to do so may restart the motor suddenly.
- The load used should be a three-phase induction motor only. Connection of any other electrical equipment to the inverter output may damage the equipment.
- Do not modify the equipment.
- Do not perform parts removal which is not instructed in this manual. Doing so may lead to fault or damage of the inverter.

## $\triangle$ CAUTION

- The electronic thermal relay function does not guarantee protection of the motor from overheating.
- Do not use a magnetic contactor on the inverter input for frequent starting/stopping of the inverter.
- Use a noise filter to reduce the effect of electromagnetic interference. Otherwise nearby electronic equipment may be affected.
- Take measures to suppress harmonics. Otherwise power supply harmonics from the inverter may heat/damage the power capacitor and generator.
- When a 400 V class motor is inverter-driven, please use an insulation-enhanced motor or measures taken to suppress surge voltages. Surge voltages attributable to the wiring constants may occur at the motor terminals, deteriorating the insulation of the motor.
- When parameter clear or all clear is performed, reset the required parameters before starting operations. Each parameter returns to the factory setting.
- The inverter can be easily set for high-speed operation. Before changing its setting, fully examine the performances of the motor and machine.
- In addition to the inverter's holding function, install a holding device to ensure safety.
- Before running an inverter which had been stored for a long period, always perform inspection and test operation.
(5) Emergency stop

## $\triangle$ CAUTION

- Provide a safety backup such as an emergency brake which will prevent the machine and equipment from hazardous conditions if the inverter fails.
- When the breaker on the inverter primary side trips, check for the wiring fault (short circuit), damage to internal parts of the inverter, etc. Identify the cause of the trip, then remove the cause and power on the breaker.
-When any protective function is activated, take the appropriate corrective action, then reset the inverter, and resume operation.
(6) Maintenance, inspection and parts replacement

| D CAUTION |
| :--- |
| Do not carry out a megger (insulation resistance) test on the control circuit of the |
| inverter. |

(7) Disposing of the inverter

| T. CAUTION |
| :--- | :--- |
| - Treat as industrial waste. |

## (8) General instructions

Many of the diagrams and drawings in this instruction manual (detailed) show the inverter without a cover, or partially open. Never operate the inverter in this manner. Always replace the cover and follow this instruction manual (detailed) when operating the inverter.

## CONTENTS

## 1. WIRING

1.1 Standard connection diagram and terminal specifications .....  2
1.1.1 Standard connection diagram ..... 2
1.1.2 Explanation of main circuit terminals ..... 3
1.2 Main circuit terminals ..... 6
1.2.1 Terminal block layout ..... 6
1.2.2 Cables, wiring length, and crimping terminals ..... 7
1.2.3 Wiring instructions ..... 8
1.2.4 Selection of peripheral devices ..... 9
1.2.5 Leakage current and installation of earth leakage circuit breaker. ..... 10
1.2.6 Power-off and magnetic contactor (MC) ..... 14
1.2.7 Regarding the installation of the power factor improving reactor ..... 15
1.2.8 Regarding noise and the installation of a noise filter ..... 16
1.2.9 Earthing precautions ..... 17
1.2.10 Power supply harmonics ..... 18
1.2.11 Inverter-driven 400V class motor ..... 19
1.3 How to use the control circuit terminals ..... 20
1.3.1 Terminal block layout ..... 20
1.3.2 Wiring instructions ..... 20
1.3.3 Changing the control logic ..... 21
1.4 Input terminals ..... 23
1.4.1 Run (start) and stop (STF, STR, STOP) ..... 23
1.4.2 Connection of frequency setting potentiometer and output frequency meter (10, 2, 5, 4, AU) ..... 26
1.4.3 External frequency selection (REX, RH, RM, RL) ..... 27
1.4.4 Indicator connection and adjustment (AM) ..... 29
1.4.5 Control circuit common terminals (PC, 5, SE) ..... 30
1.4.6 Signal inputs by contactless switches ..... 30
1.5 How to use the input signals (assigned terminals RL, RM, RH, STR) ..... 31
1.5.1 Multi-speed setting (RL, RM, RH, REX signals):
Pr. 60 to Pr. 63 setting "0, 1, 2, 8"
Remote setting (RL, RM, RH signals):
Pr. 60 to Pr. 63 setting "0, 1, 2" ..... 31
1.5.2 Second function selection (RT signal): Pr. 60 to Pr. 63 setting "3" ..... 31
1.5.3 Current input selection "AU signal": Pr. 60 to Pr. 63 setting "4" ..... 31
1.5.4 Start self-holding selection (STOP signal): Pr. 60 to Pr. 63 setting "5" ..... 32
1.5.5 Output shut-off (MRS signal): Pr. 60 to Pr. 63 setting "6" ..... 32
1.5.6 External thermal relay input: Pr. 60 to Pr. 63 setting "7" ..... 33
1.5.7 Jog operation (JOG signal): Pr. 60 to Pr. 63 setting "9" ..... 33
1.5.8 Reset signal: Pr. 60 to Pr. 63 setting "10" ..... 34
1.5.9 PID control valid terminal: Pr. 60 to Pr. 63 setting "14". ..... 35
1.5.10 PU operation/external operation switchover: Pr. 60 to Pr. 63 setting "16". ..... 35
1.6 Connection to the Stand-Alone Option ..... 36
1.6.1 Connection of the brake unit (BU type) ..... 36
1.6.2 Connection of the high power factor converter (FR-HC) ..... 37
1.6.3 Connection of the power regeneration common converter (FR-CV) ..... 38
1.7 Handling of the RS-485 connector ..... 39
1.7.1 Connection of the parameter unit (FR-PU04) ..... 39
1.7.2 Wiring of RS-485 communication ..... 40
1.8 Design information ..... 43
2. FUNCTIONS ..... 45
2.1 Function (Parameter) list ..... 46
2.2 List of parameters classified by purpose of use ..... 59
2.3 Explanation of functions (parameters) ..... 61
2.3.1 Torque boost (Pr. 0 , Pr. 46 ) ..... 61
2.3.2 Maximum and minimum frequency (Pr. 1, Pr. 2 ) ..... 62
2.3.3 Base frequency, base frequency voltage (Pr.3, Pr. 19 , Pr. 47 ) ..... 63
2.3.4 Multi-speed operation (Pr. 4, Pr. 5, Pr. 6, Pr. 24 to Pr. 27, Pr. 80 to Pr. 87)64
2.3.5 Acceleration/deceleration time (Pr. 7, Pr. 8, Pr. 20 , Pr. 44 , Pr. 45 ) ..... 65
2.3.6 Selection and protection of a motor (Pr. 9, Pr. 71, H7 ) ..... 67
2.3.7 DC injection brake (Pr. 10, Pr. 11, Pr. 12 ) ..... 69
2.3.8 Starting frequency (Pr. 13 ) ..... 70
2.3.9 Load pattern selection (Pr. 14 ) ..... 71
2.3.10 Jog operation (Pr.15, Pr. 16 ) ..... 72
2.3.11 RUN key rotation direction selection (Pr.17) ..... 72
2.3.12 Stall prevention function and current limit function (Pr. 21 ) ..... 73
2.3.13 Stall prevention (Pr. 22 , Pr. 23 , Pr. 28 ) ..... 75
2.3.14 Acceleration/deceleration pattern (Pr. 29) ..... 77
2.3.15 Extended function display selection (Pr. 30 ) ..... 78
2.3.16 Frequency jump (Pr. 31 to Pr. 36 ) ..... 78
2.3.17 Speed display (Pr. 37 ) ..... 79
2.3.18 Biases and gains of the frequency setting voltage (current) (Pr. 38 , Pr. 39 , C2 to C7) ..... 80
2.3.19 Start-time earth fault detection selection (Pr. 40 ) ..... 84
2.4 Output terminal function parameters ..... 84
2.4.1 Up-to-frequency (Pr. 41 ) ..... 84
2.4.2 Output frequency detection (Pr. 42 , Pr. 43 ) ..... 85
2.5 Current detection function parameters ..... 86
2.5.1 Output current detection functions (Pr. 48 , Pr. 49 ) ..... 86
2.5.2 Zero current detection (Pr. 50 , Pr. 51 ) ..... 87
2.6 Display function parameters ..... 88
2.6.1 Monitor display (Pr. 52 , Pr. 54 ) ..... 88
2.6.2 Setting dial function selection (Pr. 53 ) ..... 89
2.6.3 Monitoring reference (Pr. 55 , Pr. 56 ) ..... 90
2.7 Restart operation parameters ..... 90
2.7.1 Restart setting (Pr. 57 , Pr. 58 , H6 ) ..... 90
2.8 Additional function parameters ..... 93
2.8.1 Remote setting function selection (Pr. 59 ) ..... 93
2.9 Terminal function selection parameters ..... 96
2.9.1 Input terminal function selection (Pr. 60 , Pr. 61 , Pr. 62 , Pr. 63 ) ..... 96
2.9.2 Output terminal function selection (Pr. 64 , Pr. 65) ..... 98
2.10 Operation selection function parameters ..... 99
2.10.1 Retry function (Pr. 66 , Pr. 67 , Pr. 68 , Pr. 69 ) ..... 99
2.10.2 PWM carrier frequency and long wiring mode (Pr. 70 , $\operatorname{Pr} .72$ ) ..... 101
2.10.3 Voltage input selection (Pr. 73 ) ..... 102
2.10.4 Input filter time constant (Pr. 74 ) ..... 103
2.10.5 Reset selection/PU stop selection (Pr. 75) ..... 103
2.10.6 Cooling fan operation selection (Pr. 76 ) ..... 105
2.10.7 Parameter write disable selection (Pr. 77 ) ..... 106
2.10.8 Reverse rotation prevention selection (Pr. 78) ..... 107
2.10.9 Operation mode selection (Pr. 79 ) ..... 107
2.10.10 PID control (Pr. 88 to Pr. 94 ) ..... 111
2.11 Auxiliary parameters ..... 118
2.11.1 Slip compensation (Pr. 95, Pr. 96 , Pr. 97 ) ..... 118
2.11.2 Automatic torque boost selection (Pr. 98 ) ..... 119
2.11.3 Motor primary resistance (Pr. 99 ) ..... 120
2.12 Maintenance parameters ..... 120
2.12.1 Maintenance output function (H1, H2 ) ..... 120
2.12.2 Current average value monitor signal ( $\mathrm{H} 3, \mathrm{H} 4, \mathrm{H} 5$ ) ..... 121
2.13 Calibration parameters ..... 124
2.13.1 Meter (frequency meter) calibration (C1) ..... 124

### 1.1 Standard connection diagram and terminal specifications

### 1.1.1 Standard connection diagram

- Three-phase 400V power input

$\odot$ Main circuit terminal $\circ$ Control circuit terminal

## REMARKS

*1. You can switch the position of sink and source logic. Refer to page 21.
*2. When the setting potentiometer is used frequently, use a $2 \mathrm{~W} 1 \mathrm{k} \Omega$ potentiometer.
*3. The terminal functions change with input terminal function selection (Pr. 60 to Pr. 63). (Refer to page 96.) (RES, RL, RM, RH, RT, AU, STOP, MRS, OH, REX, JOG, X14, X16, (STR) signal selection)
*4. The terminal function changes according to the setting of output terminal function selection (Pr. 64, Pr. 65). (Refer to page 98.) (RUN, SU, OL, FU, RY, Y12, Y13, FDN, FUP, RL, Y93, Y95, LF, ABC signal selection)

## CAUTION

To prevent a malfunction due to noise, keep the signal cables more than 10 cm away from the power cables.

- Single-phase 200 V power input

## REMARKS

-To ensure safety, connect the power input to the inverter via a magnetic contactor and earth leakage circuit breaker or no-fuse breaker, and use the magnetic contactor to switch power on-off.
-The output is three-phase 200 V .

### 1.1.2 Explanation of main circuit terminals

## (1) Main circuit

| Terminal Symbol | Terminal Name | Description |
| :---: | :---: | :---: |
| L1, L2, L3 (*1) | AC power input | Connect to the commercial power supply. |
| U, V, W | Inverter output | Connect a three-phase squirrel-cage motor. |
| +, - | Brake unit connection | Connect the brake unit (BU), power regeneration common converter (FR-CV) or high power factor converter (FR-HC). |
| +, P1 | Power factor improving DC reactor connection | Remove the jumper across terminals + - P1 and connect the optional power factor improving DC reactor (FR$B E L(-H))$. |
| $\stackrel{1}{\square}$ | Earth | For earthing the inverter chassis. Must be earthed. |

*1. When using single-phase power input, terminals are L1 and N.

## (2) Control circuit

| Symbol |  |  | Terminal Name | Definition |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { A } \\ & \text { B } \\ & \text { C } \end{aligned}$ |  | Alarm output | Changeover contact output indicates that the inverter protective function has activated and the output stopped. 230VAC 0.3A, 30VDC 0.3A. Alarm: discontinuity across B-C (continuity across A-C), Normal: continuity across B-C (discontinuity across A-C).(*5) | The function of the terminals changes according to the output terminal function selection (Pr. 64, Pr.65). (*4) |
|  | ¢ | RUN | Inverter running | Switched low when the inverter output frequency is equal to or higher than the starting frequency (factory set to 0.5 Hz variable). Switched high during stop or DC injection brake operation. (*2) Permissible load 24VDC 0.1A (a voltage drop is 3.4 V maximum when the signal is on) |  |
|  | SE |  | Open collector common | Common terminal for inverter running terminal RUN. (*6) |  |
|  | - | AM | Analog signal output | The output signal across terminals AM-5 is 5 VDC at 50 Hz and is proportional to the c frequency. <br> Frequency permissible load current 1 m Output signal 0 to 5VDC | s factory set to about corresponding output <br> A |
|  |  |  | RS-485 connector | Using the parameter unit connection ca 205), the parameter unit (FR-PU04) can Communication operation can be perfo For details of RS-485 communication, | le (FR-CB201 to be connected. med using RS-485. fer to page 40. |

*1. Do not connect terminals SD and PC each other or to the earth.
For source logic (factory setting), terminal PC acts as the common terminal of contact input. For sink logic, terminal SD acts as the common terminal of contact input. (Refer to page 21 for switching method.)
*2. Low indicates that the open collector output transistor is on (conducts). High indicates that the transistor is off (does not conduct).
*3. RL, RM, RH, RT, AU, STOP, MRS, OH, REX, JOG, RES, X14, X16, (STR) signal selection (Refer to page 96.)
*4. RUN, SU, OL, FU, RY, Y12, Y13, FDN, FUP, RL, Y93, Y95, LF, ABC signal selection (Refer to page 98.)
*5. To be compliant with the European Directive (Low Voltage Directive), the operating capacity of relay outputs (A, B, C) should be 30VDC 0.3A.
*6. Terminals SD, SE and 5 are isolated from each other. Do not earth.

### 1.2 Main circuit terminals

### 1.2.1 Terminal block layout

1) Three-phase 400 V power input

## - FR-S540E-0.4K, 0.75K, 1.5K, 2.2K, 3.7K-EC

2) Single-phase 200V power input

CAUTION
-Make sure the power cables are connected to the L1, L2, L3 of the inverter. Never connect the power cable to the U, V, W of the inverter. (Phase need not be matched)
-Connect the motor to U, V, W. At this time, turning on the forward rotation switch (signal) rotates the motor in the counterclockwise direction when viewed from the motor shaft.

### 1.2.2 Cables, wiring length, and crimping terminals

The following table indicates a selection example for the wiring length of 20 m .

1) Three-phase 400 V power input

| Applied Inverter | Terminal <br> Screw size | Tightening Torque N.m | Crimping Terminal |  | Cable |  |  |  | PVC Insulation <br> Cable$\|$$\mathrm{mm}^{2}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | $\mathrm{mm}^{2}$ |  | AWG |  |  |  |
|  |  |  | L1, L2, L3 | U, V, W | L1, L2, L3 | U, V, W | L1, L2, L3 | U, V, W | L1, L2, L3 | U, V, W |
| $\begin{aligned} & \text { FR-S540E-0.4K } \\ & \text { to } 3.7 \mathrm{~K}-\mathrm{EC} \\ & \hline \end{aligned}$ | M4 | 1.5 | 2-4 | 2-4 | 2 | 2 | 14 | 14 | 2.5 | 2.5 |

2) Single-phase 200 V power input

| Applied Inverter | Termi nal Screw size | Tightening Torque N.m | Crimping Terminal |  | Cable |  |  |  | PVC InsulationCable$\mathbf{m m}^{2}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | $\mathrm{mm}^{2}$ |  | AWG |  |  |  |
|  |  |  | L1,N | U, V, W | L1,N | U, V, W | L1,N | U, v, W | L1, N | U, V, W |
| $\begin{aligned} & \text { FR-S520SE-0.2K } \\ & \text { to } 0.75 \mathrm{~K}-\mathrm{EC} \end{aligned}$ | M3.5 | 1.2 | 2-3.5 | 2-3.5 | 2 | 2 | 14 | 14 | 2.5 | 2.5 |
| FR-S520SE-1.5K- EC | M4 | 1.5 | 2-4 | 2-4 | 2 | 2 | 14 | 14 | 2.5 | 2.5 |

- Wiring length

100 m maximum. (50m maximum for the FR-S540E-0.4K-EC.)

## CAUTION

-When the wiring length of the 0.2 K of the single-phase 200 V class and 0.4 K and 0.75 K of the three-phase 400 V class is 30 m or more, set the carrier frequency to 1 kHz .
-When automatic torque boost is selected in Pr. 98 "automatic torque boost selection (motor capacity)", the wiring length should be 30m maximum. (Refer to page 119.)

### 1.2.3 Wiring instructions

1) Use insulation-sleeved crimping terminals for the power supply and motor cables.
2) Application of power to the output terminals $(\mathrm{U}, \mathrm{V}, \mathrm{W})$ of the inverter will damage the inverter. Never perform such wiring.
3) After wiring, wire offcuts must not be left in the inverter.

Wire offcuts can cause an alarm, failure or malfunction. Always keep the inverter clean.
When drilling a control box etc., take care not to let wire offcuts enter the inverter.
4) Use cables of the recommended size to make a voltage drop $2 \%$ maximum.

If the wiring distance is long between the inverter and motor, a main circuit cable voltage drop will cause the motor torque to decrease especially at the output of a low frequency.
5) For long distance wiring, the high response current limit function may be reduced or the devices connected to the secondary side may malfunction or become faulty under the influence of a charging current due to the stray capacity of wiring. Therefore, note the maximum overall wiring length.
6) Electromagnetic wave interference

The input/output (main circuit) of the inverter includes high frequency components, which may interfere with the communication devices (such as AM radios) used near the inverter. In this case, install a FR-BIF(-H) optional radio noise filter (for use on the input side only) or FR-BSF01 or FR-BLF line noise filter to minimize interference.
7) Do not install a power capacitor, surge suppressor or radio noise filter (FR-BIF(-H) option) on the output side of the inverter.
This will cause the inverter to trip or the capacitor and surge suppressor to be damaged. If any of the above devices are connected, remove them. (When using the FR-BIF(-H) radio noise filter with a single-phase power supply, connect it to the input side of the inverter after isolating the L3 phase securely.)
8) Before starting wiring or other work after the inverter is operated, wait for at least 10 minutes after the power supply has been switched off, and check that there are no residual voltage using a tester or the like. The capacitor is charged with high voltage for some time after power off and it is dangerous.

### 1.2.4 Selection of peripheral devices

Check the capacity of the motor applicable to the inverter you purchased. Appropriate peripheral devices must be selected according to the capacity.
Refer to the following list and prepare appropriate peripheral devices:

1) Three-phase 400 V power input

| Motor <br> Output <br> (kW) | Applied Inverter <br> Type | No-fuse Breaker <br> (NFB *1, 4) or <br> Earth Leakage <br> Circuit Breaker <br> (ELB) (Refer to <br> page 10) (*2, 4) | Magnetic <br> Contactor <br> (MC) <br> (Refer to <br> page 14) | Power Factor <br> Improving AC <br> Reactor <br> (Refertopage <br> 15) | Power Factor <br> Improving DC <br> Reactor <br> (Refertopage <br> 15) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{0 . 4}$ | FR-S540E-0.4K-EC | $30 \mathrm{AF} / 5 \mathrm{~A}$ | S-N10 | FR-BAL- <br> H0.4K | FR-BEL- <br> H0.4K |
| $\mathbf{0 . 7 5}$ | FR-S540E-0.75K-EC | $30 \mathrm{AF} / 5 \mathrm{~A}$ | S-N10 | FR-BAL- <br> H0.75K | FR-BEL- <br> H0.75K |

2) Single-phase 200 V power input

| Motor <br> Output (kW) | Applied Inverter Type | No-fuse Breaker (NFB *1, 4) or Earth Leakage Circuit Breaker (ELB) (Refer to page 10) (*2, 4) | Magnetic Contactor (MC) (Refer to page 14) | Power Factor Improving AC Reactor (Refer to page 15) (*3) | Power Factor Improving DC Reactor (Refer to page 15) (*3) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0.2 | FR-S520SE-0.2K-EC | 30AF/10A | S-N10 | FR-BAL-0.4K | FR-BEL-0.4K |
| 0.4 | FR-S520SE-0.4K-EC | 30AF/10A | $\begin{aligned} & \text { S-N2O, } \\ & \text { S-N21 } \end{aligned}$ | FR-BAL-0.75K | FR-BEL-0.75K |
| 0.75 | FR-S520SE-0.75K-EC | 30AF/15A | $\begin{aligned} & \text { S-N20, } \\ & \text { S-N21 } \end{aligned}$ | FR-BAL-1.5K | FR-BEL-1.5K |
| 1.5 | FR-S520SE-1.5K-EC | 30AF/20A | $\begin{aligned} & \text { S-N20, } \\ & \text { S-N21 } \end{aligned}$ | FR-BAL-2.2K | FR-BEL-2.2K |

*1. - Select the NFB according to the inverter power supply capacity.

- Install one NFB per inverter.

*2. For installations in the United States or Canada, the circuit breaker must be inverse time or instantaneous trip type.
*3. The power factor may be slightly lower.
*4. When the breaker on the inverter primary side trips, check for the wiring fault (short circuit), damage to internal parts of the inverter, etc. Identify the cause of the trip, then remove the cause and power on the breaker.

### 1.2.5 Leakage current and installation of earth leakage circuit breaker

Due to static capacitances existing in the inverter I/O wiring and motor, leakage currents flow through them. Since their values depend on the static capacitances, carrier frequency, etc., take the following countermeasures.
(1) To-earth leakage currents

Leakage currents may flow not only into the inverter's own line but also into the other line through the earth cable, etc.
These leakage currents may operate earth leakage circuit breakers and earth leakage relays unnecessarily.

- Countermeasures
- If the carrier frequency setting is high, decrease the carrier frequency (Pr. 72) of the inverter.
Note that motor noise increases. Selection of Soft-PWM control (Pr. 70) will make it unoffending. (Factory setting)
- By using earth leakage circuit breakers designed for harmonic and surge suppression in the inverter's own line and other line, operation can be performed with the carrier frequency kept high (with low noise).

## (2) Line-to-line leakage currents

Harmonics of leakage currents flowing in static capacities between the inverter output cables may operate the external thermal relay unnecessarily.

Line-to-Line Leakage Current Path

- Countermeasures
- Use the electronic thermal relay function of the inverter.
- Decrease the carrier frequency. Note that motor noise increases. Selection of Soft-PWM (Pr. 70) makes it unoffending.
To ensure that the motor is protected against line-to-line leakage currents, it is recommended to use a temperature sensor to directly detect motor temperature.
- Installation and selection of no-fuse breaker

Install a no-fuse breaker (NFB) on the power receiving side to protect the wiring of the inverter primary side. Select the NFB according to the power supply side power factor (which depends on the power supply voltage, output frequency and load). Especially for a completely electromagnetic NFB, one of a slightly large capacity must be selected since its operation characteristic varies with harmonic currents. (Check it in the data of the corresponding breaker.) As an earth leakage breaker, use the Mitsubishi earth leakage breaker designed for harmonics and surge suppression. (Refer to page 7 for the recommended models.)

CAUTION

## -Select the NFB according to the inverter power supply capacity. - Install one NFB per inverter.

## (3) Selecting the rated sensitivity current for the earth leakage circuit breaker

When using the earth leakage circuit breaker with the inverter circuit, select its rated sensitivity current as follows, independently of the PWM carrier frequency:

- Breaker for harmonic and surge

Rated sensitivity current:
$\mid \Delta n \geq 10 \times(\lg 1+\lg n+\lg 2+\lg m)$

- Standard breaker

Rated sensitivity current:
$\mid \Delta \mathrm{n} \geq 10 \times\{\lg 1+\lg \mathrm{n}+3 \times(\lg 2+\lg m)\}$
$\lg 1, \lg 2$ : Leakage currents of cable path during commercial power supply operation
lgn* : Leakage current of noise filter on inverter input side
lgm : Leakage current of motor during commercial power supply operation

* Note the leakage current value of the noise filter installed on the inverter input side.

Example of leakage current per 1 km in cable path during commercial power supply operation when the CV cable is routed in metal conduit (3-phase 3-wire delta connection cable 400 V 60 Hz )

Leakage current example of three-phase induction motor during commercial power supply operation
(Totally-enclosed fan-cooled type motor 400 V 60 Hz )

Motor capacity (kW)

About $1 / 3$ of the above for star connection cable.
<Example>

|  | Breaker for harmonic and <br> surge | Standard breaker |
| :--- | :---: | :---: |
| Leakage current (lg1) (mA) | $\frac{1}{3} \times 66 \times 5 \mathrm{~m} / 1000 \mathrm{~m}=0.11$ |  |
| Leakage current (lgn) (mA) | 0 (without noise filter) |  |
| Leakage current (lg2) (mA) | $\frac{1}{3} \times 66 \times 70 \mathrm{~m} / 1000 \mathrm{~m}=1.54$ |  |
| Motor leakage current (Igm) (mA) | 0.58 |  |
| Total leakage current (mA) | 2.23 | 6.47 |
| Rated sensitivity current <br> $(\mathrm{mA})(\geq \lg \times 10)$ | 30 | 100 |

-The earth leakage circuit breaker should be installed to the primary (power supply) side of the inverter.
-In the $\lambda$ connection neutral point earthed system, the sensitivity current becomes worse for earth faults on the inverter secondary side. Earthing must conform to the requirements of national and local safety regulations and electrical codes. (JIS, NEC section 250, IEC 536 class 1 and other applicable standards)
-When the breaker is installed on the secondary side of the inverter, it may be unnecessarily operated by harmonics if the effective value is less than the rating. In this case, do not install the breaker since the eddy current and hysteresis loss increase and the temperature rises.
-General products indicate the following models: BV-C1, BC-V, NVB, NV-L, NVG2N, NV-G3NA, NV-2F, earth leakage relay (except NV-ZHA), NV with AA neutral wire open-phase protection
The other models are designed for harmonic and surge suppression: NV-C/ NV-S/MN series, NV30-FA, NV50-FA, BV-C2, earth leakage alarm breaker (NFZ), NV-ZHA, NV-H

### 1.2.6 Power-off and magnetic contactor (MC)

## (1) Inverter input side magnetic contactor (MC)

On the inverter's input side, it is recommended to provide an MC for the following purposes. (Refer to page 9 for selection)

1) To release the inverter from the power supply when the inverter protective function is activated or the drive becomes faulty (e.g. emergency stop operation)
2) To prevent any accident due to an automatic restart at restoration of power after an inverter stop made by a power failure
3) To rest the inverter for an extended period of time

The control power supply for inverter is always running and consumes a little power. When stopping the inverter for an extended period of time, powering off the inverter will save power slightly.
4) To separate the inverter from the power supply to ensure safe maintenance and inspection work
The inverter's input side MC is used for the above purpose, select class JEM1038AC3 for the inverter input side current when making an emergency stop during normal operation.

## REMARKS

The MC may be switched on/off to start/stop the inverter. However, since repeated inrush currents at power on will shorten the life of the converter circuit (switching life is about 100,000 times), frequent starts and stops must be avoided. Turn on/off the inverter start controlling terminals (STF, STR) to run/stop the inverter.
As shown on the right, always use the start signal (ON or OFF across terminals STF or STR-PC) to make a start or stop.
(Refer to page 23)
*1. When the power supply is 400 V class, install a step-down transformer.

Inverter Start/Stop Circuit Example

## (2) Handling of output side magnetic contactor

In principle, do not provide a magnetic contactor between the inverter and motor and switch it from off to on during operation. If it is switched on during inverter operation, a large inrush current may flow, stopping the inverter due to overcurrent shut-off. When an MC is provided for switching to the commercial power supply, for example, switch it on/off after the inverter and motor have stopped.

### 1.2.7 Regarding the installation of the power factor improving reactor

When the inverter is installed near a large-capacity power transformer (500kVA or more with the wiring length of 10 m or less) or the power capacitor is to be switched, an excessive peak current will flow in the power supply input circuit, damaging the converter circuit. In such a case, always install the power factor improving reactor (FR$B E L(-H)$ or FR-BAL(-H)).

## REMARKS

*When connecting the FR-BEL(-H), remove the jumper across terminals -P1.
The wiring length between the FR-BEL $(-\mathrm{H})$ and the inverter should be 5 m maximum and as short as possible.
Use the cables which are equal in size to those of the main circuit. (Refer to page 7)

### 1.2.8 Regarding noise and the installation of a noise filter

Some noise enters the inverter causing it to malfunction and others are generated by the inverter causing the malfunction of peripheral devices. Though the inverter is designed to be insusceptible to noise, it handles low-level signals, so it requires the following general countermeasures to be taken.

## (1) General countermeasures

- Do not run the power cables (I/O cables) and signal cables of the inverter in parallel with each other and do not bundle them.
- Use twisted shield cables for the detector connecting and control signal cables and connect the sheathes of the shield cables to terminal SD.
- Earth the inverter, motor, etc. at one point.
- Capacitances exist between the inverter's I/O wiring, other cables, earth and motor, through which leakage currents flow to cause the earth leakage circuit breaker, earth leakage relay and external thermal relay to operate unnecessarily. To prevent this, take appropriate measures, e.g. set the carrier frequency in Pr. 72 to a low value, use an earth leakage circuit breaker designed for suppression of harmonics and surges, and use the electronic thermal relay function built in the inverter.
- The input and output of the inverter main circuit include high-degree harmonics, which may disturb communication devices (AM radios) and sensors used near the inverter. In this case, install a FR-BIF(-H) optional radio noise filter (for use on the input side only) or FR-BSF01 line noise filter to minimize interference.
<Noise reduction examples>

### 1.2.9 Earthing precautions

- Leakage currents flow in the inverter. To prevent an electric shock, the inverter and motor must be earthed. Earthing must conform to the requirements of national and local safety regulations and electrical codes.
(JIS, NEC section 250, IEC 536 class 1 and other applicable standards)
- Use the dedicated earth terminal to earth the inverter. (Do not use the screw in the casing, chassis, etc.)
Use a tinned ${ }^{*}$ crimping terminal to connect the earth cable. When tightening the screw, be careful not to damage the threads.
*Plating should not include zinc.
- Use the thickest possible earth cable. Use the cable whose size is equal to or greater than that indicated in the following table, and minimize the cable length.
The earthing point should be as near as possible to the inverter.

| Motor Capacity | Earth Cable Size (Unit: $\mathbf{~ m m}^{\mathbf{2}}$ ) |  |
| :---: | :---: | :---: |
|  | 200V class | 400V class |
| 2.2 kW or less | $2(2.5)$ | $2(2.5)$ |
| 3.7 kW | $3.5(4)$ | $2(4)$ |

For use as a product compliant with the Low Voltage Directive, use PVC cable whose size is indicated within parentheses.

- Earth the motor on the inverter side using one wire of the 4 -core cable.

### 1.2.10 Power supply harmonics

The inverter may generate power supply harmonics from its converter circuit to affect the power generator, power capacitor etc. Power supply harmonics are different from noise and leakage currents in source, frequency band and transmission path. Take the following countermeasure suppression techniques.

- The following table indicates differences between harmonics and noise:

| Item | Harmonics | Noise |
| :--- | :--- | :--- |
| Frequency | Normally 40th to 50th degrees or less <br> (up to 3kHz or less) | High frequency (several 10kHz <br> to 1GHz order) |
| Environment | To-electric channel, power impedance | To-space, distance, wiring path |
| Quantitative <br> understanding | Theoretical calculation possible | Random occurrence, <br> quantitative grasping difficult |
| Generated amount | Nearly proportional to load capacity | Change with current variation <br> ratio (larger as switching speed <br> increases) |
| Affected equipment <br> immunity | Specified in standard per equipment | Different depending on maker's <br> equipment specifications |
| Suppression example | Provide reactor. | Increase distance. |

- Suppression technique Harmonic currents produced on the power supply side by the inverter change with such conditions as whether there are wiring impedances and a power factor improving reactor (FR-BEL(-H) or FR-BAL(-H)) and the magnitudes of output frequency and output current on the load side.

Do not provide power factor improving capacitor.

For the output frequency and output current, we understand that they should be calculated in the conditions under the rated load at the maximum operating frequency.

[^0]
### 1.2.11 Inverter-driven 400V class motor

In the PWM type inverter, a surge voltage attributable to wiring constants is generated at the motor terminals. Especially for a 400 V class motor, the surge voltage may deteriorate the insulation. When the 400 V class motor is driven by the inverter, consider the following measures:

- Measures

It is recommended to take either of the following measures:

## (1) Rectifying the motor insulation

For the 400 V class motor, use an insulation-enhanced motor. Specifically

1) Specify the " 400 V class inverter-driven, insulation-enhanced motor".
2) For the dedicated motor such as the constant-torque motor and low-vibration motor, use the "inverter-driven, dedicated motor".

## CAUTION

When the wiring length between the motor and inverter is 40 m or more, take the above countermeasure and also set the long wiring mode in Pr. 70 "SoftPWM setting". (Refer to page 101 for Pr. 70.)
(2) Suppressing the surge voltage on the inverter side

On the secondary side of the inverter, connect the optional surge voltage suppression filter (FR-ASF-H).

### 1.3 How to use the control circuit terminals

### 1.3.1 Terminal block layout

In the control circuit of the inverter, the terminals are arranged as shown below:

### 1.3.2 Wiring instructions

1) Terminals PC, SE and 5 are common to the I/O signals isolated from each other. Do not earth them.
2) Use shielded or twisted cables for connection to the control circuit terminals and run them away from the main and power circuits (including the 200V relay sequence circuit).
3) The input signals to the control circuit are micro currents. When contacts are required, use two or more parallel micro signal contacts or a twin contact to prevent a contact fault.

### 1.3.3 Changing the control logic

The input signals are set to source logic.
To change the control logic, the jumper connector under the setting dial must be moved to the other position.

- Change the jumper connector position using tweezers, a pair of long-nose pliers etc.
Change the jumper connector position before switching power on.

## CAUTION

-Make sure that the front cover is installed securely.
-The front cover is fitted with the capacity plate and the inverter unit with the rating plate. Since these plates have the same serial numbers, always replace the removed cover onto the original inverter.
-The sink-source logic change-over jumper connector must be fitted in only one of those positions. If it is fitted in both positions at the same time, the inverter may be damaged.

1) Source logic type

- In this logic, a signal switches on when a current flows into the corresponding signal input terminal.
Terminal PC is common to the contact input signals. For the open collector output signals, terminal SE is a positive external power supply terminal.

- Connecting the 0 V terminal of the external power supply for transistor output to terminal SD prevents a malfunction caused by an undesirable current.

## 2) Sink logic type

- In this logic, a signal switches on when a current flows from the corresponding signal input terminal.
Terminal SD is common to the contact input signals. Terminal SE is common to the open collector output signals.

- Connecting a positive terminal of the external power supply for transistor output to terminal PC prevents a malfunction caused by an undesirable current. (Do not connect terminal SD of the inverter with terminal 0 V of the external power supply. When using terminals PC-SD as a 24VDC power supply, do not install an external power supply in parallel with the inverter. Doing so may cause a malfunction in the inverter due to an undesirable current.)

### 1.4 Input terminals

### 1.4.1 Run (start) and stop (STF, STR, STOP)

To start and stop the motor, first switch on the input power supply of the inverter (switch on the magnetic contactor, if any, in the input circuit during preparation for operation), then start the motor with the forward or reverse rotation start signal.
(1) Two-wire type connection (STF, STR)

A two-wire type connection is shown on the right.

1) The forward/reverse rotation signal is used as both the start and stop signals. Switch on either of the forward and reverse rotation signals to start the motor in the corresponding direction. Switch on both or switch off the start signal during operation to decelerate the inverter to a stop.
2) The frequency setting signal may either be given by entering 0 to 5VDC (or 0 to 10VDC) across frequency setting input terminals 2-5 or by setting the required values in Pr. 4 to Pr. 6 "multispeed setting" (high, middle, low speeds). (For multi-speed operation, refer to page 27.)

3) After the start signal has been input, the inverter starts operating when the frequency setting signal reaches or exceeds the "starting frequency" set in Pr. 13 (factory-set to 0.5 Hz ).
If the motor load torque is large or the "torque boost" set in Pr. 0 is small, operation may not be started due to insufficient torque until the inverter output frequency reaches about 3 to 6 Hz .
If the "minimum frequency" set in Pr. 2 (factory setting $=0 \mathrm{~Hz}$ ) is 6 Hz , for example, merely entering the start signal causes the running frequency to reach the minimum frequency of 6 Hz according to the "acceleration time" set in Pr. 7.
4) To stop the motor, operate the DC injection brake for the period of "DC injection brake operation time" set in Pr. 11 (factory setting $=0.5 \mathrm{~s}$ ) at not more than the DC injection brake operation frequency or at not more than 0.5 Hz .
To disable the DC injection brake function, set 0 in either of Pr. 11 "DC injection brake operation time" or Pr. 12 "DC injection brake voltage".
In this case, the motor is coasted to a stop at not more than the frequency set in
Pr. 10 "DC injection brake operation frequency" ( 0 to 120 Hz variable) or at not more than 0.5 Hz (when the DC injection brake is not operated).
5) If the reverse rotation signal is input during forward rotation or the forward rotation signal is input during reverse rotation, the inverter is decelerated and then switched to the opposite output without going through the stop mode.

## (2) Three-wire type connection (STF, STR, STOP)

A three-wire type connection is shown on the right. Assign the start self-holding signal (STOP) to any of the input terminals. To make a reverse rotation start, set Pr. 63 to "- - -" (factory setting).

1) Short the signals STOP-PC to enable the start self-holding function. In this case, the forward/reverse rotation signal functions only as a start signal.
(Note) Assign the stop signal to any of Pr. 60 to Pr. 62 (input terminal function selection).
2) If the start signal terminals STF (STR)PC are shorted once, then opened, the start signal is kept on and starts the inverter. To change the rotation direction, short the start signals STR (STF)-PC once, then open it.
3) The inverter is decelerated to a stop by opening the signals STOP-PC once. For the frequency setting signal and the operation of DC injection brake at a stop time, refer to paragraphs 2) to 4) in (1) Two-wire type connection. The right diagram shows 3-wire type connection.
4) When the signals JOG-PC are shorted, the STOP signal is invalid and the JOG signal has precedence.
5) If the output stop signals MRS-PC are shorted, the self-holding function is not deactivated.

DC Injection Brake and Coasting to Stop Functionality

|  | External Operation or Combined Operation Pr. 79 = "0", "2", "3" |  | PU Operation or Combined Operation <br> Pr. 79 = "0", "1", "4" |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Terminals STF (STR)-PC disconnected (*1) | Set frequency changed to 0 Hz | Stop key | Set frequency changed to 0 Hz |
| DC injection brake enabl | DC injection brake operated at not more than "DC injection brake operation frequency" set in Pr. 10 | DC injection brake operated at 0.5 Hz or less. | DC injection brake operated at not more than "DC injection brake operation frequency" set in Pr. 10 | DC injection brake operated at 0.5 Hz or less. |
| DC injection brake disabled | Coasted to a stop at not more than "DC injection brake operation frequency" set in Pr. 10 | Coasted to a stop at 0.5 Hz or less. | Coasted to a stop at not more than "DC injection brake operation frequency" set in Pr. 10 | Coasted to a stop at 0.5 Hz or less. |

*1: Also stopped by the

## STOP

Refer to page 103.

## Start/Stop Timing Chart (for two-wire type)

Forward-Reverse Rotation Switch-Over Timing Chart

## REMARKS

*1. The "starting frequency" in Pr. 13 (factory-set to 0.5 Hz ) may be set between 0 and 60 Hz .
*2. If the next start signal is given during DC injection brake operation, the DC injection brake is disabled and restart is made.
*3. The "DC injection brake operation time" in Pr. 11 (factory-set to 0.5 s ) may be set between 0 and 10s.
*4. The frequency at which the motor is coasted to a stop is not more than the "DC injection brake operation frequency" set in Pr. 10 (factory setting $=3 \mathrm{~Hz}$; may be set between 0 and 120 Hz ) or not more than 0.5 Hz .
*5. The "starting frequency" in Pr. 13, "DC injection brake operation time" in Pr. 11 and "DC injection brake operation frequency" in Pr. 10 are the factory-set values.

### 1.4.2 Connection of frequency setting potentiometer and output frequency meter (10, 2, 5, 4, AU)

The analog frequency setting input signals that may be entered are voltage and current signals.
For the relationships between the frequency setting input voltages (currents) and output frequencies, refer to the following diagram. The frequency setting input signals are proportional to the output frequencies. Note that when the input signal is less than the starting frequency, the output frequency of the inverter is 0 Hz .
If the input signal of 5 VDC (or $10 \mathrm{~V}, 20 \mathrm{~mA}$ ) or higher is entered, the output frequency does not exceed the maximum output frequency.

Relationships between Frequency Setting Inputs and Output Frequencies

## REMARKS

For the way to calibrate the output frequency meter, refer to page 124.

## (1) Voltage input $(10,2,5)$

Enter the frequency setting input signal of 0 to 5VDC (or 0 to 10VDC) across the frequency setting input terminals $2-5$. The maximum output frequency is reached when 5 V ( 10 V ) is input across terminals $2-5$.
The power supply used may either be the inverter's built-in power supply or an external power supply. For the built-in power supply, terminals 10-5 provide 5VDC output.

- For operation at 0 to 5 VDC , set " 0 " in Pr. 73 to the 0 to 5VDC input. Use terminal 10 for the built-in power supply.

- For operation at 0 to 10VDC, set "1" in Pr. 73 to the 0 to 10VDC input.

## (2) Current input (4, 5, AU)

To automatically perform operation under constant pressure or temperature control using a fan, pump etc., enter the controller output signal of 4 to 20mADC across terminals 4-5.
Terminals AU-PC must be shorted to use the 4 to 20mADC signal for operation. (Assign the signal AU using any of Pr. 60 to Pr. 63.)
When the multi-speed signal is input, the current input is ignored.

### 1.4.3 External frequency selection (REX, RH, RM, RL)

Up to 15 speeds (*) may be selected for an external command forward rotation start or up to 7 speeds for an external command reverse rotation start according to the combination of connecting the multi-speed select terminals REX, RH, RM and RL-PC, and multi-speed operation can be performed as shown below by shorting the start signal terminal STF (STR)-PC.
Speeds (frequencies) may be specified as desired from the operation panel or parameter unit as listed below.

## CAUTION

-     * Change the setting of Pr. 63 "STR terminal function selection" to "8", and assign and use as the 15 -speed select signal (REX). Has precedence over the main speed setting signal ( 0 to $5 \mathrm{~V}, 0$ to $10 \mathrm{~V}, 4$ to 20mADC).

Multi-Speed Setting

| Speed | Terminal Input |  |  |  | Parameter | Set Frequency Range | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| External setting | OFF | OFF | OFF | OFF | Frequency setting potentiometer | 0 to max. setting |  |

*When using the REX signal, an external command cannot be used to make a reverse rotation start.

Multi-Speed Operation Connection Example

## REMARKS

*1. When the frequency setting potentiometer is connected, the input signal of the frequency setting potentiometer is ignored if the multi-speed select signal is switched on. (This also applies to the 4 to 20 mA input signal.)
*2. For a reverse rotation start, set Pr. 63 to "- - -" (factory setting) to make the STR signal of terminal STR valid.

### 1.4.4 Indicator connection and adjustment (AM)

A full-scale 5VDC analog signal can be output from across terminals AM 5.

The analog output level can be calibrated by the operation panel or parameter unit (FR-PU04). Terminal AM function selection can be set in Pr. 54 "AM terminal function selection".
Terminal AM is isolated from the control circuit of the inverter. The cable length should not exceed 30 m .
The output signal from terminal AM delays about several 100 ms in output and therefore cannot be used as a signal for control which requires fast response.

### 1.4.5 Control circuit common terminals (PC, 5, SE)

Terminals PC, 5, and SE are all common terminals for I/O signals and are isolated from each other.
Terminal PC is a common terminal for the contact input terminals (STF, STR, RH, RM, RL).
Terminal 5 is a common terminal for the frequency setting analog input signals and indicator terminal "AM". It should be protected from external noise using a shielded or twisted cable.
Terminal SE is a common terminal for the open collector output terminal (RUN).

### 1.4.6 Signal inputs by contactless switches

If a transistor is used instead of a contacted switch as shown on the right, the input signals of the inverter can control terminals STF, STR, RH, RM, RL.

External signal input using transistor

## REMARKS

1.When using an external transistor connected to an external power supply, use terminal PC to prevent a malfunction from occurring due to a leakage current. (Refer to page 21.)
2. Note that an SSR (solid-state relay) has a relatively large leakage current at OFF time and it may be accidentally input to the inverter.

### 1.5 How to use the input signals (assigned terminals RL, RM, RH, STR)

These terminals can be changed in function by setting Pr. 60 to Pr. 63.

| Pr. 60 "RL terminal function selection" |  |
| :--- | :--- |
| Pr. 61 "RM terminal function selection" | Page 96 |
| Pr. 62 "RH terminal function selection" |  |
| Pr. 63 "STR terminal function selection" |  |

### 1.5.1 Multi-speed setting (RL, RM, RH, REX signals): <br> Pr. 60 to Pr. 63 setting "O, 1, 2, 8" <br> Remote setting (RL, RM, RH signals):

Pr. 60 to Pr. 63 setting " $0,1,2$ "

- By entering frequency commands into the RL, RM, RH and REX signals and turning on/off the corresponding signals, you can perform multi-speed operation (15 speeds). (For details, refer to page 27.)
- If the operation panel is away from the control box, you can perform continuous variable-speed operation with signal contacts, without using analog signals. (For details, refer to page 93.)

### 1.5.2 Second function selection (RT signal): Pr. 60 to Pr. 63 setting " 3 "

Pr. 44 "second acceleration/deceleration time"
Pr. 45 "second deceleration time"
Pr. 46 "second torque boost"
Pr. 47 "second V/F (base frequency)"
To set any of the above functions, turn on this Second acceleration "RT signal".

### 1.5.3 Current input selection "AU signal": Pr. 60 to Pr. 63 setting "4"

When a fan, pump etc. is used to perform operation of constant- pressure/ temperature control, automatic operation can be performed by entering the $4-20 \mathrm{mADC}$ output signal of a regulator into across terminals 4-5.

## REMARKS

The current input is ignored if the multi-speed signal is input.

### 1.5.4 Start self-holding selection (STOP signal): Pr. 60 to Pr. 63 setting "5"

This connection example is used when you want to self-hold the start signal (forward rotation, reverse rotation).

* Connected to the STOP signal to avoid forward or reverse rotation if forward or reverse rotation and stop are turned on simultaneously.

(Wiring example for sink logic)

### 1.5.5 Output shut-off (MRS signal): Pr. 60 to Pr. 63 setting "6"

Short the output stop terminal MRS-PC during inverter output to cause the inverter to immediately stop the output. Open terminals MRS-PC to resume operation in about 10 ms . Terminal MRS may be used as described below:
(1) To stop the motor by mechanical brake (e.g. electromagnetic brake) Terminals MRS-PC must be shorted when the mechanical brake is operated and be opened before motor restart.
(2) To provide interlock to disable operation by the inverter
After MRS-PC have been shorted, the inverter cannot be operated if the start signal is given to the inverter.

(STR)
(3) To coast the motor to stop

The motor is decelerated according to the preset deceleration time and is stopped by operating the DC injection brake at 3 Hz or less. By using terminal MRS, the motor is coasted to a stop.

### 1.5.6 External thermal relay input: Pr. 60 to Pr. 63 setting "7"

When the external thermal relay or thermal relay built in the motor is actuated, the inverter output is shut off and an alarm signal is given to keep the motor stopped to protect the motor from overheat. Even if the thermal relay contact resets, the motor cannot be restarted unless the reset terminals RES-PC are shorted for more
 than 0.1 s and then opened or a power-on reset is made. The function may therefore be used as an external emergency stop signal input.

### 1.5.7 Jog operation (JOG signal): Pr. 60 to Pr. 63 setting " 9 "

(1) Jog operation using external signals

Jog operation can be started/stopped by shorting the jog mode select terminals JOGPC and shorting/opening the start signal terminals STF or STR-PC. The jog frequency and jog acceleration/deceleration time are set in Pr. 15 (factory setting 5Hz, variable between 0 and 120 Hz ) and Pr. 16 (factory setting 0.5 s , variable between 0 and 999s), respectively, and their settings can be changed from the operation panel or parameter unit.
The JOG signal has precedence over the multi-speed signal. (External)

### 1.5.8 Reset signal: Pr. 60 to Pr. 63 setting "10"

Used to reset the alarm stop state established when the inverter's protective function is activated. The reset signal immediately sets the control circuit to the initial (cold) status, e.g. initializes the electronic thermal relay function protection circuit. It shuts off the inverter output at the same time. During reset, the inverter output is kept shut off. To give this reset input, short terminals RES-PC for more than 0.1 s . When the shorting time is long, the operation panel or parameter unit displays the initial screen, which is not a fault.
After opening terminals RES-PC (about 1s), operation is enabled.
The reset terminal is used to reset the inverter alarm stop state. If the reset terminal is shorted, then opened while the inverter is running, the motor may be restarted during coasting (refer to the timing chart below) and the output may be shut off due to overcurrent or overvoltage.
Setting either "1" or "15" in reset selection Pr. 75 allows the accidental input of the reset signal during operation to be ignored.
(For details, refer to page 103.)

T: Should be longer than the time of coasting to stop.

Frequent resetting will make electronic thermal relay function invalid.

### 1.5.9 PID control valid terminal: Pr. 60 to Pr. 63 setting "14"

To exercise PID control, turn on the X14 signal. When this signal is off, ordinary inverter operation is performed. For more information, refer to page 111.
> -Related parameters $\downarrow$
> Pr. 88 "PID action selection", Pr. 89 "PID proportional band", Pr. 90 "PID integral time", Pr. 91 "PID upper limit", Pr. 92 "PID lower limit", Pr. 93 "PID action set point for PU operation", Pr. 94 "PID differential time" (Refer to page 111.)

### 1.5.10 PU operation/external operation switchover: Pr. 60 to Pr. 63 setting "16"

You can change the operation mode.
With "8" set in Pr. 79 "operation mode selection", turning on the X16 signal shifts the operation mode to the external operation mode and turning off the X16 signal shifts it to the PU operation mode. For details, refer to page 107.

Related parameters
Pr. 79 "operation mode selection" (Refer to page 107.)

### 1.6 Connection to the Stand-Alone Option

The inverter accepts a variety of stand-alone option units as required.
Incorrect connection will cause inverter damage or accident. Connect and operate the option unit carefully in accordance with the corresponding option unit manual.

### 1.6.1 Connection of the brake unit (BU type)

Connect the BU type brake unit correctly as shown below. Incorrect connection will damage the inverter. Remove jumpers across terminals HB-PC and TB-HC and connect a jumper across terminals PC-TB of the brake unit.

## CAUTION

1. The wiring distance between the inverter, brake unit and discharge resistor should be within $\mathbf{2 m}$. If twisted wires are used, the distance should be within 5 m .
2. If the transistors in the brake unit should become faulty, the resistor can be unusually hot, causing a fire. Therefore, install a magnetic contactor on the inverter's power supply side to shut off a current in case of fault.
3. When the power supply is 400 V class, install a step-down transformer.

### 1.6.2 Connection of the high power factor converter (FR-HC)

When connecting the high power factor converter (FR-HC) to suppress power supply harmonics, perform wiring securely as shown below. Incorrect connection will damage the high power factor converter and inverter.

CAUTION

1. Use sink logic when the FR-HC is connected. The FR-HC cannot be connected when source logic (factory setting) is selected.
2. The power input terminals L1, L2, L3 must be open. Incorrect connection will damage the inverter. Opposite polarity of terminals - , + will damage the inverter.
3. The voltage phases of terminals L1, L2, L3 and terminals R4, S4, T4 must be matched before connection.
4. Use Pr. 60 to Pr. 63 (input terminal function selection) to assign the terminals used for the RES and MRS signals.
5. Do not insert NFB between terminals P-N (P-+,N--)

### 1.6.3 Connection of the power regeneration common converter (FR-CV)

When connecting the FR-CV type power regeneration common converter, connect the inverter terminals (+, -) and FR-CV type power regeneration common converter terminals as shown below so that their signals match with each other.

## CAUTION

1. Use sink logic when the FR-CV is connected. The FR-CV cannot be connected when source logic (factory setting) is selected.
2. The power input terminals L1, L2, L3 must be open. Incorrect connection will damage the inverter. Opposite polarity of terminals -, + will damage the inverter.
3. The voltage phases of terminals R/L11, S/L21, T/MC1 and terminals R2/L1, S2/L2, T2/L3 must be matched before connection.
4. Use Pr. 60 to Pr. 63 (input terminal function selection) to assign the terminals used for the RES and MRS signals.
5. Do not insert NFB between terminals P-N (P/L+-+,N/L---)
6. Make sure to connect the terminal R/L11, S/L21, T/MC1 to the power supply. Running the inverter without connecting the terminals will damage the power regeneration common converter.

### 1.7 Handling of the RS-485 connector

<RS-485 connector pin layout> View A of the inverter (receptacle side)

CAUTION

1. Do not plug the connector to a computer LAN port, fax modem socket, telephone modular connector etc.. The product could be damaged due to differences in electrical specifications.
2. Pins 2 and 8 (P5S) are provided for the parameter unit power supply. Do not use them for any other purpose or when making parallel connection by RS485 communication.
3. Refer to page 130 for the communication parameters.

### 1.7.1 Connection of the parameter unit (FR-PU04)

When connecting the parameter unit to the RS-485 connector, use the optional parameter unit connection cable (FR-CB2 $\square \square$ ).

## CAUTION

When the parameter unit is used, the operation other than the stop key (STOP $)$ ) of the operation panel is disabled.

Refer to page 149 for the parameters related to parameter unit setting.

### 1.7.2 Wiring of RS-485 communication

Use the RS-485 connector to perform communication operation from a personal computer etc.
When the RS-485 connector is connected with a personal, FA or other computer by a communication cable, a user program can run and monitor the inverter or read and write to the parameters. For parameter setting, refer to page 128.
-Conforming standard: EIA-485 (RS-485)
-Transmission format: Multidrop link system
-Communication speed: Max. 19200bps
-Overall extension: 500m
Refer to page 128 for the setting related to RS-485 communication operation.

## <System configuration examples>

(1) Connection of a computer to the inverter (1:1 connection)

- Computer-inverter connection cable

Refer to the following for the cable (RS-232C $\Leftrightarrow$ RS-485 converter) for connection of the computer having the RS-232C interface with the inverter.
Example of product available on the market (as of April, 2004)

| Model | Maker |
| :---: | :---: |
| FA-T-RS40口* | Mitsubishi Electric Engineering Co., Ltd. |

*The converter cable cannot connect two or more inverters (the computer and inverter are connected on a $1: 1$ basis). Since the product is packed with the RS232C cable and RS-485 cable (10BASE-T + RJ-45 connector), the cable and connector need not be prepared separately.

## REMARKS

Refer to the following when fabricating the cable on the user side.
Example of product available on the market (as of April, 2004)

|  | Product | Model | Maker |
| :---: | :---: | :---: | :---: |
| 1) | 10BASE-T cable | SGLPEV-T 0.5mm $\times 4 \mathrm{P}$ |  |
|  | º not use pins No. 2, 8 (P5S). | Mitsubishi Cable Industries, Ltd. |  |
| 2) | RJ-45 connector | $5-554720-3$ | Tyco Electronics Corporation |

## (2) Combination of computer and multiple inverters (1:n connection)

## REMARKS

Refer to the following when fabricating the cable on the user side.
Example of product available on the market (as of April, 2004)

|  | Product | Model | Maker |
| :---: | :---: | :---: | :---: |
| 1) | 10BASE-T cable | SGLPEV-T 0.5mm $\times 4$ P $^{*}$ | Mitsubishi Cable Industries, Ltd. |
| 2) | RJ-45 connector | $5-554720-3$ | Tyco Electronics Corporation |

* Do not use pins No. 2, 8 (P5S) of the 10BASE-T cable.

## <Wiring methods>

1) Wiring of one RS-485 computer and one inverter

| Computer Side Terminals |  | Cable connection and signal direction 10 BASE-T Cable |  |
| :---: | :---: | :---: | :---: |
| Signal name | Description |  | RS-485 connector |
| RDA | Receive data |  | SDA |
| RDB | Receive data |  | SDB |
| SDA | Send data |  | RDA |
| SDB | Send data |  | RDB |
| RSA | Request to send |  |  |
| RSB | Request to send | $71\}$ |  |
| CSA | Clear to send | $\left.\frac{1}{1}--\right\lrcorner{ }^{\text {- }}$ |  |
| CSB | Clear to send | $0.3 \mathrm{~mm}^{2}$ or more |  |
| SG | Signal ground | 0.3 mm or more | SG |
| FG | Frame ground |  |  |

2) Wiring of one RS-485 computer and "n" inverters (several inverters)

Cable connection and signal direction

## REMARKS

*1. Make connection in accordance with the instruction manual of the computer to be used with. Fully check the terminal numbers of the computer since they change with the model.
*2. The inverters may be affected by reflection depending on the transmission speed or transmission distance. If this reflection hinders communication, provide a terminating resistor. When the RS-485 connector is used for connection, a terminating resistor cannot be fitted, so use a distributor. Connect the terminating resistor to only the inverter remotest from the computer. (Terminating resistor: 100 $\Omega$ )

### 1.8 Design information

1) Provide electrical and mechanical interlocks for MC1 and MC2 which are used for commercial power supply-inverter switchover.
When the wiring is incorrect or if there is a commercial power supply-inverter switch-over circuit as shown below, the inverter will be damaged by leakage current from the power supply due to arcs generated at the time of switchover or chattering caused by a sequence error.
2) If the machine must not be restarted when power is restored after a power failure, provide a magnetic contactor in the inverter's primary circuit and also make up a sequence which will not switch on the start signal.
If the start signal (start switch) remains on after a power failure, the inverter will automatically restart as soon as the power is restored.
3) Since the input signals to the control circuit are on a low level, use two or more parallel micro signal contacts or a twin contact for contact inputs to prevent a contact fault.
4) Do not apply a large voltage to the contact input terminals (e.g. STF) of the control circuit.
5) Always apply a voltage to the alarm output terminals (A, B, C) via a relay coil, lamp etc.
6) Make sure that the specifications and rating match the system requirements.

| 1) Commercial power supply-inverter switchover | 3) Low-level signal contacts |

|  |  |

MEMO

## 2. FUNCTIONS

This chapter explains the "functions" for use of this product. For simple variable-speed operation of the inverter, the factory settings of the parameters may be used as they are. Set the necessary parameters to meet the load and operational specifications. Refer to the instruction manual (basic) for the operation procedures. Always read the instructions before using the functions.

## REMARKS

## Parameter copy

Use of the parameter unit (FR-PU04) allows the parameter values to be copied to another FR-S500 series inverter. After batch-reading the parameters of the copy source inverter, you can connect the parameter unit to the copy destination inverter and batch-write the parameters.
For the operation procedure, refer to the instruction manual of the parameter unit (FR-PU04).

## CAUTION

As the contact input terminals RL, RM, RH, STR, open collector output terminal RUN and contact output terminals A, B, C can be changed in functions by parameter setting, their signal names used for the corresponding functions are used in this chapter (with the exception of the wiring examples). Note that they are not terminal names.
$\qquad$

## 2．1 Function（Parameter）list

## $=$ $\square$

CAUTION indicates that the setting can be changed during operation if Pr． 77 ＂parameter write disable selection＂has been set to＂0＂（factory setting）．（Note that the Pr．53，Pr． 70 and Pr． 72 values can be changed only during PU operation．）

## REMARKS

1.The parameter number in parentheses is the one for use with the parameter unit (FR-PU04).
2. Set "9999" when setting a value "---" using the parameter unit (FR-PU04).
3. The decimal places of a value 100 or more (3 digits or more) cannot be displayed.

### 2.2 List of parameters classified by purpose of use

Set the parameters according to the operating conditions. The following list indicates purpose of use and corresponding parameters.

| Purpose of Use |  | Parameter Numbers |
| :---: | :---: | :---: |
|  |  | Parameter numbers which must be set |
|  | Use of extended function parameters | Pr. 30 |
|  | Operation mode selection | Pr. 53, Pr. 79 (Communication parameters $\mathrm{n} 10, \mathrm{n} 17$ ) |
|  | Acceleration/deceleration time/pattern adjustment | Pr. 7, Pr. 8, Pr. 16, Pr. 20, Pr. 29, Pr. 44, Pr. 45 |

### 2.3 Explanation of functions (parameters)

### 2.3.1 Torque boost (Pr. 0 P田, Pr. 46 P47)

Increase this value for use when the inverter-to-motor distance is long or motor torque is insufficient in the low speed range (stall prevention is activated).

- Motor torque in the low-frequency range can be adjusted to the load to increase the starting motor torque.

| Parameter | Name | Factory Setting | Setting Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 0 | Torque boost | $15 \% / 4 \%$ | 0 to $15 \%$ | The factory setting varies according <br> to the inverter capacity. (Refer to the <br> following table for details.) |
| 46 | Second torque <br> boost | --- | 0 to $15 \%$, | --- Function invalid. Setting is |
| enabled when Pr. $30=11$. |  |  |  |  |

## <Setting>

-Assuming that the base frequency voltage is $100 \%$, set the 0 Hz voltage in \%.
Use the RT signal to switch between two different torque boosts. (Turn on the RT signal to make Pr. 46 valid(*).)

## REMARKS

The RT signal acts as the second function selection signal and makes the other second functions valid.

- When using an inverter-dedicated motor (constant-torque motor), make setting as indicated below.
(If the factory set Pr. 71 value is changed to the setting for use with a constant-torque motor, the Pr. 0 setting changes to the corresponding value in the following table.)

| Inverter Type | Inverter Capacity | Factory Setting | Constant-torque Motor Setting |
| :--- | :--- | :---: | :---: |
| FR-S520SE | 0.2 K to 0.75 K | $6 \%$ | $6 \%$ (no change) |
|  | 1.5 K to 3.7 K |  | $4 \%$ |
| FR-S540E | $0.4 \mathrm{~K}, 0.75 \mathrm{~K}$ | $6 \%$ | $6 \%$ (no change) |
|  | 1.5 K | $5 \%$ | $4 \%$ |
|  | 2.2 K | $5 \%$ | $3 \%$ |
|  | 3.7 K | $4 \%$ | $3 \%$ |

## CAUTION

## - Selecting automatic torque boost control makes this parameter setting invalid.

 -A too large setting may cause the motor to overheat or result in an overcurrent trip. The guideline is about $10 \%$ at the greatest.
## Related parameters

- RT signal (second function "Pr. 46") setting $\Rightarrow$ Pr. 60 to Pr. 63 "input terminal function selection" (refer to page 96)
- Constant-torque motor setting $\Rightarrow$ Pr. 71 "applied motor" (refer to page 67)
- Automatic torque boost control selection $\Rightarrow$ Pr. 98 "automatic torque boost selection (motor capacity)" (refer to page 119)

### 2.3.2 Maximum and minimum frequency (Pr. 1 Pf, Pr. 2 P

You can clamp the upper and lower limits of the output frequency.

| Parameter | Name | Factory Setting | Setting Range |
| :---: | :--- | :---: | :---: |
| 1 | Maximum frequency | 50 Hz | 0 to 120 Hz |
| 2 | Minimum frequency | 0 Hz | 0 to 120 Hz |

## <Setting>

- Use Pr. 1 to set the upper limit of the output frequency. If the frequency of the frequency command entered is higher than the setting, the output frequency is clamped at the maximum frequency.
- Use Pr. 2 to set the lower limit of the output frequency.

## REMARKS

When using the potentiometer (frequency setting potentiometer) connected across terminals $2-5$ to perform operation above 50 Hz , change the Pr. 1 and Pr. 38 (Pr. 39 when using the potentiometer across terminals 4-5) values.

## $\triangle$ CAUTION

If the Pr. 2 setting is higher than the Pr. 13 "starting frequency" value, note that the motor will run at the frequency set in Pr. 2 according to the acceleration time setting by merely switching the start signal on, without entry of the command frequency.

## - Related parameters *

- Maximum frequency setting using external potentiometer
$\Rightarrow \operatorname{Pr} .30$ "extended function display selection" (refer to page 78),
Pr. 38 "frequency setting voltage gain frequency",
Pr. 39 "frequency setting current gain frequency" (refer to page 80)

### 2.3.3 Base frequency, base frequency voltage (Pr. 3 P司, Pr. 19 Pis, Pr. 47 [ [4r )

Used to adjust the inverter outputs (voltage, frequency) to the motor rating.

| Parameter | Name | Factory Setting | Setting Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 3 | Base frequency | 50 Hz | 0 to 120 Hz |  |
| 19 | Base frequency voltage | 888 | $\begin{aligned} & 0 \text { to } 800 \mathrm{~V} \text {, } \\ & 888,--- \end{aligned}$ | 888: $95 \%$ of power supply voltage -- -: Same as power supply voltage Setting is enabled when Pr. $30=11$ ". |
| 47 | Second V/F (base frequency) |  | 0 to 120 Hz , | -- : Function invalid Setting is enabled when Pr. $30=" 1 "$. |

## <Setting>

-In Pr. 3 and Pr. 47, set the base frequency (motor's rated frequency).
Use the RT signal to switch between these two different base frequencies.
(Turn on the RT signal to make Pr. 47 valid.) (*)
When running the standard motor, generally set the "base frequency" to the rated frequency of the motor. When running the motor using commercial power supplyinverter switch-over operation, set the base frequency to the same value as the power supply frequency.

- Set the base voltage (e.g. rated voltage of motor) in Pr. 19.

## CAUTION

## 1. Set 60 Hz in Pr. 3 "base frequency" when using a Mitsubishi constant-torque motor. <br> 2. When automatic torque boost is selected, Pr. 47 is invalid. When automatic torque boost is selected, setting "---" or " 888 " in Pr. 19 uses the rated output voltage.

## REMARKS

* The RT signal serves as the second function selection signal and makes the other second functions valid.

## - Related parameters ${ }^{\star}$

- RT signal (second function "Pr. 47") setting $\Rightarrow$ Pr. 60 to Pr. 63 (input terminal function selection) (refer to page 96)
- Motor setting $\Rightarrow$ Pr. 71 "applied motor" (refer to page 67)
- Automatic torque boost selection $\Rightarrow$ Pr. 98 "automatic torque boost selection (motor capacity)" (refer to page 119)

### 2.3.4 Multi-speed operation (Pr. 4 ए鸟, Pr. 5 PG, Pr. 6 PR, 

Used to switch between the predetermined running speeds.

- Any speed can be selected by merely switching on/off the corresponding contact signals (RH, RM, RL, REX signals).
- By using these functions with Pr. 1 "maximum frequency" and Pr. 2 "minimum frequency", up to 17 speeds can be set.
- This function is valid in the external operation mode or in the combined operation mode which is available when Pr. $79=$ " 3 " or " 4 ".

## <Setting>

-Set the running frequencies in the corresponding parameters.
Each speed (frequency) can be set as desired between 0 and 120 Hz during inverter operation.
When the parameter of any multi-speed setting is read, turn the
 to change the setting.
In this case, press the (SET) (WRITE) to store the frequency. (This is also enabled in the external mode.)
The setting is reflected by pressing the (SET (WRITE).

- Assign the terminals used for signals RH, RM, RL and REX using Pr. 60 to Pr. 63. (When terminal assignment is changed using Pr. 60 to Pr. 63, the other functions may be affected. Please make setting after confirming the function of each terminal.)

## CAUTION

1. The multi-speed settings override the main speeds (across terminals 2-5, 45, setting dial). When the multi-speed settings and setting dial are used in the combined operation mode (Pr. 79=3), the multi-speed settings have precedence.
2. The multi-speeds can also be set in the PU or external operation mode.
3. For 3-speed setting, if two or three speeds are simultaneously selected, priority is given to the set frequency of the lower signal.
4. Pr. 24 to Pr. 27 and Pr. 80 to Pr. 87 settings have no priority between them.
5. The parameter values can be changed during operation.
6. When using this function with the jog signal, the jog signal has precedence.

## REMARKS

The frequency-set external terminals have the following priority:
Jog > multi-speed operation > AU (terminal 4) > terminal 2

## - Related parameters

- Maximum, minimum frequency setting $\Rightarrow$ Pr. 1 "maximum frequency", Pr. 2 "minimum frequency" (refer to page 62)
- Assignment of signals RH, RM, RL, REX to terminals $\Rightarrow$ Pr. 60 to Pr. 63 (input terminal function selection) (refer to page 96)
- External operation mode setting $\Rightarrow$ Pr. 79 "operation mode selection" (refer to page 107)
- Computer link mode $\Rightarrow$ Pr. 79 "operation mode selection" (refer to page 107), communication parameter n10 "link startup mode selection" (refer to page 146)
- Speed command source $\Rightarrow$ Communication parameter n9 "speed command source" (refer to page 145)

### 2.3.5 Acceleration/deceleration time (Pr. 7 Pr, Pr. 8 P回,

 Pr. 20 PE\#, Pr. 44 Рपष, Pr. 45 (P4)Used to set motor acceleration/ deceleration time.
Set a larger value for a slower speed increase/decrease or a smaller value for a faster speed increase/decrease.

| Parameter | Name | Factory Setting | Setting Range | Remarks |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7 | Acceleration time | 5 s | 0 to 999s |  |  |
| 8 | Deceleration time | 5s | 0 to 999s |  |  |
| 20 | Acceleration/ deceleration reference frequency | 50 Hz | 1 to 120 Hz | Setting is enabled when Pr. 30 = "1". |  |
| 44 | Second acceleration/ deceleration time | 5s | 0 to 999s | Setting is enabled when Pr. $30=11$ ". |  |
| 45 | Second deceleration time | --- | 0 to 999s, | acceleration time= deceleration time. | Setting is enabled when $\text { Pr. } 30=" 1 " .$ |

## <Setting>

- Use Pr. 7 and Pr. 44 to set the acceleration time required to reach the frequency set in Pr. 20 from 0Hz.
- Use Pr. 8 and Pr. 45 to set the deceleration time required to reach 0 Hz from the frequency set in Pr. 20.
- Pr. 44 and Pr. 45 are valid when the RT signal is on. (When the RT signal is on, the other second functions (Pr. 44, Pr. 45, Pr. 46, Pr. 47, additional parameter H7) are also selected.)
- Set "- --" in Pr. 45 to make the deceleration time equal to the acceleration time (Pr. 44).

## CAUTION

1. In S-shaped acceleration/deceleration pattern A (refer to page 77), the set time is the period required to reach the base frequency set in Pr. 3.

- Acceleration/deceleration time formula when the set frequency is the base frequency or higher

$$
t=\frac{4}{9} \times \frac{T}{(\operatorname{Pr} .3)^{2}} \times f^{2}+\frac{5}{9} T
$$

T : Acceleration/deceleration time setting (s) $f$ : Set frequency (Hz)
-Guideline for acceleration/deceleration time at the base frequency of 50 Hz ( 0 Hz to set frequency)

| Frequency setting (Hz) | $\mathbf{5 0}$ | $\mathbf{1 2 0}$ |
| :---: | :---: | :---: |
| Acceleration/ |  |  |
| deceleration time (s) |  |  |$\quad$|  |
| :---: |
| 5 |
| 15 |

2. If the Pr. 20 setting is changed, the settings of calibration functions Pr. 38 and Pr. 39 (frequency setting signal gains) remain unchanged.
To adjust the gains, adjust calibration functions Pr. 38 and Pr. 39.
3. When the setting of Pr. 7, Pr. 8, Pr. 44 or Pr. 45 is " 0 ", the acceleration/ deceleration time is 0.04 s .
4. If the acceleration/deceleration time is set to the shortest value, the actual motor acceleration/deceleration time cannot be made shorter than the shortest acceleration/deceleration time which is determined by the mechanical system's J (moment of inertia) and motor torque.

## - Related parameters

- Base frequency setting $\Rightarrow$ Pr. 3 "base frequency" (refer to page 63)
- Acceleration/deceleration pattern, S-pattern acceleration/deceleration A $\Rightarrow$ Pr. 29 "acceleration/deceleration pattern" (refer to page 77)
- Calibration function $\Rightarrow$ Pr. 38 "frequency setting voltage gain frequency" Pr. 39 "frequency setting current gain frequency" (refer to page 80)
- RT signal setting $\Rightarrow \operatorname{Pr} 60$ to Pr. 63 (input terminal function selection) (refer to page 96)
- Jog acceleration/deceleration time $\Rightarrow$ Pr. 16 "jog acceleration/deceleration time" (refer to page 72)

### 2.3.6 Selection and protection of a motor (Pr. 9 P图, Pr. 71 Prit , H7 [77)

Set the motor used and protect the motor from overheat.
This feature provides the optimum protective characteristics, including reduced motor cooling capability, at low speed.
POINT

- When using the Mitsubishi constant-torque motor
Set "1" in Pr. 71 for V/F control or automatic torque boost control.
The electronic thermal relay function is set to the thermal characteristic of the
constant-torque motor.
- When you selected the Mitsubishi constant-torque motor, the values of the following
parameters are automatically changed. (only when the setting values of those
parameters are at factory setting)
Pr. 0 "torque boost", Pr. 12 "DC injection brake voltage"

| Para meter | Name | Factory Setting | Setting Range | Remarks |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 9 | Electronic thermal O/L relay | Rated output current | 0 to 50A |  |  |
| 71 | Applied motor | 0 | $\begin{array}{c\|} \hline 0,1, \\ 100,101 \end{array}$ |  | Setting is enabled |
| $\begin{gathered} \text { H7 } \\ (559) \end{gathered}$ | Second electronic thermal O/L relay |  | $0 \text { to 50A, }$ | $---:$ Without second electronic thermal relay function | when $\text { Pr. } 30 \text { = "1" }$ |

- The parameter number in parentheses is the one for use with the parameter unit (FR-PU04).

## <Setting>

-Refer to the following list and set Pr. 71 according to the motor used.
Setting "100 or 101" changes thermal characteristic of the electronic thermal relay function to thermal characteristics of a Mitsubishi constant-torque motor when the RT signal is ON.

| Pr. 71 Setting | Thermal Characteristic of the ElectronicThermal Relay Function |
| :---: | :--- |
| 0,100 | Thermal characteristics of a standard motor |
| 1,101 | Thermal characteristics of a Mitsubishi constant-torque motor <br> (This provides a 100\% continuous torque characteristic in the low-speed region.) |

- Set the rated current $[A]$ of the motor in Pr. 9.
- Setting "0" in Pr. 9 disables electronic thermal relay function (motor protective function). (The protective function of the inverter is activated.)
-When setting second electronic thermal relay function, set the motor rated current value in the additional parameter H 7 . The second electronic thermal relay function is valid when the RT signal is on. (When the RT signal is on, other second functions (Pr. 44 to Pr. 47 ) are also selected.)

[^1]
## REMARKS

-When running two motors with one inverter, you can set the electronic thermal relay function of each inverter.

| Pr. 71 applied motor | First Motor Electronic Thermal Relay Function |  |  | Second Motor Electronic Thermal Relay Function |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

standard $\qquad$ Thermal characteristic for standard motor
constant-torque Thermal characteristic for constant-torque motor

O .... Output current value is used to perform integration processing.
$\triangle$..... Perform integration processing using output current of 0 A .
X ..... Electronic thermal relay function is not activated (cumulative value clear)

## ACAUTION

## 

By setting the DC injection brake voltage (torque), operation time and operation starting frequency, the stopping accuracy of positioning operation, etc. or the timing of operating the DC injection brake to stop the motor can be adjusted according to the load.

Pr. 11 "Operation time"

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :--- | :---: | :---: | :--- |
| 10 | DC injection brake <br> operation frequency | 3 Hz | 0 to 120 Hz | Setting is enabled when <br> Pr. 30 = "1". <br> (When Pr. 11 is set to "0s" or <br> (Wr. 12 is set to "0\%", DC <br> injection brake is not <br> operated.) |
| 11 | DC injection brake <br> operation time | 0.5 s | 0 to 10 s |  |
| 12 | DC injection brake voltage | $6 \%$ | 0 to $15 \%$ |  |

* The factory setting varies according to the inverter capacity. (Refer to the following table for details.)

## <Setting>

-Use Pr. 10 to set the frequency at which the DC injection brake operation is started.

- Use Pr. 11 to set the period during when the brake is operated.
-Use Pr. 12 to set the percentage of the power supply voltage.
-Change the Pr. 12 setting to 4\% when using the inverter-dedicated (constant-torque motor).
(If the Pr. 12 value remains unchanged from the factory setting and Pr. 71 is changed to the setting for use of the constant-torque motor, the Pr. 12 setting is automatically changed to $4 \%$.)

## ACAUTION

Install a mechanical brake. No holding torque is provided.

### 2.3.8 Starting frequency (Pr. 13 [回)

The starting frequency at which the start signal is turned on can be set in the range 0 to 60 Hz .

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 13 | Starting frequency | 0.5 Hz | 0 to 60 Hz | Setting is enabled when Pr. $30=" 1 "$. |

## CAUTION

The inverter will not start if the frequency setting signal is less than the value set in Pr. 13 "starting frequency".
For example, when 5 Hz is set in Pr. 13, the motor will not start running until the frequency setting signal reaches 5 Hz .

## $\triangle$ CAUTION

Note that when Pr. 13 is set to any value lower than Pr. 2 "minimum frequency", simply turning on the start signal will run the motor at the preset frequency even if the command frequency is not input.

## - Related parameters

- Minimum frequency setting $\Rightarrow$ Pr. 2 "minimum frequency" (refer to page 62)

### 2.3.9 Load pattern selection (Pr. 14 Pr $)$

You can select the optimum output characteristic (V/F characteristic) for the application and load characteristics.

| Pr.14=0 |  | Pr. $14=1$ |  | Pr.14=2 | Pr.14=3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| For constant-torque <br> loads For variable-torque <br> loads For lift For lift <br> (e.g. conveyor, cart) (Fan, pump)   |  |  |  |  |  |
|  |  |  Output freq | frequenc uency (Hz) |  <br> Boost for forward rotation Boost for .Pr. 0 (Pr.46) setting ...0\% <br> Boost for reverse rotation Boost for ...0\% | Base frequency put frequency (Hz) r forward rotation <br> reverse rotation (Pr.46) setting |
| Parameter | Name | Factory Setting | Setting Range | Remarks |  |
| 14 | Load pattern selection | 1 | 0, 1, 2, 3 | 0: For constant-torque loads <br> 1: For variable-torque loads <br> 2: For vertical lift loads <br> 3: For vertical lift loads | Setting is enabled when Pr. $30=" 1$ ". |

## CAUTION

## 1. When automatic torque boost control is selected, this parameter setting is ignored.

2. Pr. 46 "second torque boost" is made valid when the RT signal turns on. The RT signal acts as the second function selection signal and makes the other second functions valid.

## Related parameters $\downarrow$

$\bullet$ Automatic torque boost $\Rightarrow$ Pr. 98 "automatic torque boost selection (motor capacity)" (refer to page 119)
$\bullet$ Boost setting $\Rightarrow$ Pr. 0 "torque boost", Pr. 46 "second torque boost" (refer to page 61)

- Assignment of RT signal to terminal when second torque boost is used
$\Rightarrow$ Pr. 60 to Pr. 63 (input terminal function selection) (refer to page 96)

## 2．3．10 Jog operation（Pr． 15 P国，Pr． 16 P国）

To start／stop jog operation in the external operation mode，choose the jog operation function in input terminal function selection，turn on the jog signal，and turn on／off the start signal （STF，STR）．
You can choose the jog operation mode from the parameter unit（FR－ PU04）and perform jog operation using the FWD or REV．

（Can be read as the basic parameters when the FR－PU04 is connected．）
Set the frequency and acceleration／deceleration time for jog operation．

| Parameter | Name | Factory Setting | Setting Range | Remarks |
| :---: | :---: | :---: | :---: | :--- |
| 15 | Jog frequency | 5 Hz | 0 to 120 Hz | Setting is enabled when |
| 16 | Jog acceleration／ <br> deceleration time | 0.5 s | 0 to 999 s | Pr． $30=$＂ $1 "$. |

## CAUTION

－In S－shaped acceleration／deceleration pattern A，the acceleration／deceleration time is the period of time required to reach Pr． 3 ＂base frequency＂，not Pr． 20 ＂acceleration／deceleration reference frequency＂．
－The acceleration time and deceleration time cannot be set separately for jog operation．
－The Pr． 15 ＂Jog frequency＂value should be equal to or higher than the Pr． 13 ＂starting frequency＂setting．
－Assign the jog signal using any of Pr． 60 to Pr． 63 （input terminal function selection）．

## －Related parameters

$\bullet$ Assignment of jog signal to terminal $\Rightarrow$ Pr． 60 to Pr． 63 （input terminal function selection） （refer to page 96）
－Acceleration／deceleration pattern S－shaped acceleration／deceleration A
$\Rightarrow$ Pr． 29 ＂acceleration／deceleration pattern＂（refer to page 77）

## 2．3．11 RUN key rotation direction selection（Pr． 17 P国）

Used to choose the direction of rotation by operating the RUN key of the operation panel．

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 17 | RUN key rotation <br> direction selection | 0 | 0,1 | $0:$ Forward rotation <br> $1:$ Reverse rotation | Setting is enabled <br> when Pr． $30=11 "$. | Refer to 0 （page 63）

### 2.3.12 Stall prevention function and current limit function

 (Pr. 21 PEt)You can make setting to prevent stall caused by overcurrent and/or to prevent the inverter from resulting in an overcurrent trip (to disable high-response current restriction that limits the current) when an excessive current flows due to sudden load fluctuation or ON-OFF on the output side of a running inverter.

- Stall prevention

If the current exceeds the stall prevention operation level (Pr.22), the output frequency of the inverter is automatically varied to reduce the current.

- High response current limit

If the current exceeds the limit value, the output of the inverter is shut off to prevent an overcurrent.

## CAUTION

-If the load is heavy, the lift is predetermined, or the acceleration/deceleration time is short, the stall prevention may be activated and the motor not stopped in the preset acceleration/deceleration time. Therefore, set optimum values to the Pr. 21 and stall prevention operation level.
-When the high response current limit has been set in Pr. 21 (factory setting), torque will not be provided at the Pr. 22 setting of $170 \%$ or higher. At this time, make setting so that the high response current limit is not activated.
-In vertical lift applications, make setting so that the high response current limit is not activated. Torque may not be produced, causing a drop due to gravity.

## . CAUTION

Always perform test operation.
Stall prevention operation performed during acceleration may increase the acceleration time.
Stall prevention operation performed during constant speed may cause sudden speed changes.
Stall prevention operation performed during deceleration may increase the deceleration time, increasing the deceleration distance.

### 2.3.13 Stall prevention (Pr. 22 PEZ, Pr. 23 PEZ, Pr. 28 PER)

Set the output current level (\% value to the inverter rated current) at which the output frequency will be adjusted to prevent the inverter from stopping due to overcurrent etc.

- During high-speed operation above the rated motor frequency, acceleration may not be made because the motor current does not increase. To improve the operating characteristics of the motor in this case, the stall prevention level can be reduced in the high frequency region. This function is effective for performing operation up to the high speed range on a centrifugal separator etc. Normally, set 50 Hz in Pr. 28 "stall prevention operation reduction starting frequency" and 100\% in Pr. 23.

| Parameter | Name | Factory Setting | Setting Range | Remarks |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 22 | Stall prevention operation level | 150\% | 0 to 200\% | - | Setting is enabled when Pr. $30=" 1$ ". |
| 23 | Stall prevention operation level compensation factor at double speed | --- | 0 to 200\%, | - -: Pr. 22 equally |  |
| 28 | Stall prevention operation reduction starting frequency | 50 Hz | 0 to 120 Hz | - |  |

## <Setting>

-Generally, set 150\% (factory setting) in Pr. 22 "stall prevention operation level". Setting " 0 " in Pr. 22 disables stall prevention operation.
-To reduce the stall prevention operation level in the high frequency range, set the reduction starting frequency in Pr. 28 "stall prevention operation reduction starting frequency" and the reduction ratio compensation factor in Pr. 23.
Formula for stall prevention operation level
Stall prevention operation level $(\%)=A+B \times\left[\frac{\text { Pr. 22-A }}{\operatorname{Pr.22-B}}\right] \times\left[\frac{\operatorname{Pr} .23-100}{100}\right]$
where, $A=\frac{\operatorname{Pr} .28(\mathrm{~Hz}) \times \operatorname{Pr} .22(\%)}{\text { output frequency }(\mathrm{Hz})}, B=\frac{\operatorname{Pr} .28(\mathrm{~Hz}) \times \operatorname{Pr} .22(\%)}{120 \mathrm{~Hz}}$
-By setting "- - -" (factory setting) in Pr. 23, the stall prevention operation level is constant at the Pr. 22 setting up to 120 Hz .

## REMARKS

When the high response current limit is set in Pr. 21 "stall prevention function selection" (factory setting), do not set any value above $170 \%$ in Pr. 22. The torque will not be developed by doing so.
If the Pr. 22 value is set to higher than $170 \%$, make setting in Pr. 21 to disable the high response current limit.
In vertical lift applications, make setting so the high response current limit is not activated. Torque may not be produced, causing a drop due to gravity.

## $\triangle$ CAUTION

Do not set a small value as the stall prevention operation current. Otherwise, torque generated will reduce.
Test operation must be performed.
Stall prevention operation during acceleration may increase the acceleration time.
Stall prevention operation during constant speed may change the speed suddenly.
Stall prevention operation during deceleration may increase the deceleration time, increasing the deceleration distance.
$P 24$ to $P Q^{7} \Rightarrow$ Refer to $P 4$ to $P$ (page 64)

### 2.3.14 Acceleration/deceleration pattern (Pr. 29 PRG)

Set the acceleration/deceleration pattern.

Set value 0

[Linear acceleration/deceleration]

Set value 1
[S-pattern
acceleration/deceleration A]

Set value 2
[S-pattern
acceleration/deceleration B]

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :--- | :---: | :---: | :---: |
| 29 | Acceleration/ <br> deceleration pattern | 0 | $0,1,2$ | Setting is enabled when Pr. $30=" 1 "$. |

## <Setting>

| Pr. 29 <br> Setting | Function | $\quad$ Description |
| :---: | :--- | :--- |
| 0 | Linear <br> acceleration/ <br> deceleration | Acceleration is made to the set frequency linearly. <br> (Factory setting) |
| 1 | S-pattern <br> acceleration/ <br> deceleration A (*) | For machine tool spindle applications, etc. <br> Used when acceleration/deceleration must be made in a short <br> time to a high-speed region of not lower than the base <br> frequency. Acceleration/deceleration is made in a pattern <br> where fb (base frequency) acts as the inflection point of an S <br> shape, and you can set the acceleration/deceleration time <br> which matches the motor torque reduction in the constant- <br> output operation region of not lower than the base frequency. |
| 2 | S-pattern <br> acceleration/ <br> deceleration B | For prevention of load shifting in conveyor and other <br> applications. Since acceleration/deceleration is always made in <br> an S shape from f2 (current frequency) to f1 (target frequency), <br> this function eases shock produced at acceleration/ <br> deceleration and is effective for load collapse prevention, etc. |

## CAUTION

* As the acceleration/deceleration time, set the time taken to reach the Pr. 3 "base frequency" value, not the Pr. 20 "acceleration/deceleration reference frequency" value.

## - Related parameters

- Base frequency (acceleration/deceleration time setting) setting $\Rightarrow \operatorname{Pr} 3$ "base frequency" (refer to page 63)
- Pr. 20 "acceleration / deceleration reference frequency" $\Rightarrow$ refer to page 65
- For setting of "1" (S-pattern acceleration/deceleration A)
$\Rightarrow$ Pr. 44 "second acceleration/deceleration time", Pr. 45 "second deceleration time" (refer to page 65)

### 2.3.15 Extended function display selection (Pr. 30 P田)

Used to display the extended function parameters.

- Refer to page 46 for the extended function parameter list.
- Refer to the instruction manual (basic) for the parameter setting method.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :--- |
| 30 | Extended function <br> display selection | 0 | 0,1 | 0 Without display, <br> $1:$ With display |

### 2.3.16 Frequency jump (Pr. 31 Pヨit to Pr. 36 P36)

When it is desired to avoid resonance attributable to the natural frequency of a mechanical system, these parameters allow resonant frequencies to be jumped. Up to three areas may be set, with the jump frequencies set to either the top or bottom point of each area.
The value set to $1 \mathrm{~A}, 2 \mathrm{~A}$ or 3 A
 is a jump point and operation is performed at this frequency.

| Parameter | Name | Factory Setting | Setting Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 31 | Frequency jump 1A | --- | 0 to 120Hz,--- | --- -: Function invalid <br> - Setting is enabled when Pr. $30=11 "$ |
| 32 | Frequency jump 1B | --- | 0 to 120Hz,--- |  |
| 33 | Frequency jump 2A | --- | 0 to 120Hz,--- |  |
| 34 | Frequency jump 2B | --- | 0 to 120Hz,--- |  |
| 35 | Frequency jump 3A | --- | 0 to 120Hz,--- |  |
| 36 | Frequency jump 3B | --- | 0 to 120Hz,--- |  |

## <Setting>

- To fix the frequency at 30 Hz between Pr. 33 and Pr. 34 ( 30 Hz and 35 Hz ), set 30 Hz in Pr. 33 and 35 Hz in Pr. 34.
- To jump to 35 Hz between 30 and 35 Hz , set 35 Hz in Pr. 33 and 30 Hz in Pr. 34.

CAUTION
During acceleration/deceleration, the running frequency within the set area is valid.

## REMARKS

Write disable error "Er ; " occurs if the frequency jump setting ranges overlap.

## 

You can change the output frequency indication or set frequency of the operation panel and parameter unit (FR-PU04) to the motor speed or machine speed.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 37 | Speed display | 0 | $0,0.1$ to 999 | $0:$ Output <br> frequency | Setting is enabled <br> when Pr. $30=1 "$. |

## <Setting>

- To display the machine speed, set in Pr. 37 the machine speed for 60 Hz operation.

## CAUTION

-The motor speed is converted from the output frequency and does not match the actual speed.
-When you want to change the monitor (PU main display) of the operation panel, refer to Pr. 52 "operation panel display data selection" and communication parameter n16 "PU main display screen data selection".
-Since the operation panel indication is 3 digits, make a setting so that the monitor value does not exceed "999". If the Pr. 1 value is higher than 60 Hz and Pr. 1 value $\times$ Pr. 37 value $>60 \mathrm{~Hz} \times 999$ $E r \varepsilon^{3}$ (write error) occurs when Pr. 1 or Pr. 37 is written.

## REMARKS

When the speed is set in $\operatorname{Pr} 37$ ( $\operatorname{Pr} .37 \neq 0$ ), the speed is monitored and displayed in the monitor/frequency setting mode.
At this time, setting can be made in the minimum setting (display) increments of $0.01 \mathrm{r} / \mathrm{min}$. Due to the limitations on the resolution of the set frequency, the indication in the second decimal place may differ from the setting.

## ACAUTION

Make sure that the running speed setting is correct.
Otherwise, the motor might run at extremely high speed, damaging the machine.

## - Related parameters

- To choose running speed monitor display $\Rightarrow$ Pr. 52 "operation panel display data selection" (refer to page 88)
- FR-PU04 display switching $\Rightarrow$ Communication parameter n16 "PU main display screen data selection" (refer to page 150)

## 2．3．18 Biases and gains of the frequency setting voltage（current）

 （Pr． 38 国，Pr． 39 P国，C2［回 to C7［7）｜You can set the magnitude（slope）of the output frequency as desired in relation to the external frequency setting signal（ 0 to $5 \mathrm{~V}, 0$ to 10 V or 4 to 20 mADC ）．
The＂bias＂and＂gain＂functions are used to adjust the relationship between the input signal entered from outside the inverter to set the output frequency，e．g． 0 to $5 \mathrm{~V}, 0$ to 10 V or 4 to 20 mADC ，and the output frequency．

Frequency setting voltage signal

Frequency setting current signal

| Parameter | Name | Factory Setting | Setting Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 38 | Frequency setting voltage gain frequency | 50 Hz | 1 to 120 Hz | Setting is enabled when Pr． 30 ＝＂1＂． |
| 39 | Frequency setting current gain frequency | 50 Hz | 1 to 120 Hz |  |
| C2（902）＊2 | Frequency setting voltage bias frequency | 0 Hz | 0 to 60 Hz |  |
| C3（902）＊2 | Frequency setting voltage bias | 0\％＊1 | 0 to 300\％ |  |
| C4（903）＊2 | Frequency setting voltage gain | 96\％＊1 | 0 to 300\％ |  |
| C5（904）＊2 | Frequency setting current bias frequency | OHz | 0 to 60Hz |  |
| C6（904）＊2 | Frequency setting current bias | 20\％＊ 1 | 0 to 300\％ |  |
| C7（905）＊2 | Frequency setting current gain | 100\％＊1 | 0 to $300 \%$ |  |

＊1．Factory settings may differ because of calibration parameters．
＊2．The parameter number in parentheses is the one for use with the parameter unit（FR－PU04）．

## POINT

$\bullet$ Bias setting for 0－5VDC（0－10VDC）input $\Rightarrow$ Use calibration parameters C2，C3 for setting．
－Gain setting for 0－5VDC（0－10VDC）input $\Rightarrow$ Use Pr．38，calibration parameter C4 for setting．
－Bias setting for 4－20mADC input
－Gain setting for 4－20mADC input
$\Rightarrow$ Use calibration parameters C5，C6 for setting．
$\Rightarrow$ Use Pr．39，calibration parameter C7 for setting．
（For 4 to 20mADC input，set＂4＂in any of Pr． 60 to Pr． 63 （input terminal function selection）and assign AU（current input selection）to any of terminals RH，RM，RL and STR，and turn on the AU signal．）

## <Setting>

(1) How to change the highest frequency
(2) Adjusting the deviation of the highest frequency from the Pr. 38 (Pr. 39) setting.
(2)-1) Make adjustment with a voltage applied directly across terminals 2-5 (with a current flowing across terminals 4-5)
(2)-2) Make adjustment at any point without a voltage applied across terminals 2-5 (without a current flowing across terminals 4-5)
Changingexample When you want to use the 0 to 5VDC input frequency setting potentiometer to change the 5V frequency from 50 Hz (factory setting) to 40 Hz

## POINT

-Pr. 38 is an extended function parameter. Pr. 30 must be set to "1".
$\bullet$ Change Pr. 38 "frequency setting voltage gain frequency" to 40 Hz .
(1) How to change the highest frequency

## Operation

1. Confirm the RUN indication and operation mode indication.

- The inverter must be at a stop.
- The inverter must be in the PU operation mode.
(Press the (EXT).)

2. Press the to choose the parameter setting mode.
3. Turn the $\bigcirc$ until the parameter number 38 "frequency setting voltage gain frequency" appears. - Pr. 30 must be set to "1".
(For the Pr. 30 setting method, refer to the instruction manual (basic).)
4. Pressing the ster shows the currently set value. ( 50 Hz )
5. Turn the $\bigcirc$ to change the set value to "40.0". (40Hz)
6. Press the sEI) to set the value.

Flicker ... Parameter setting complete!!

## ? The monitor/frequency setting indication cannot be changed to just 40 Hz ... Why?

The calibration parameter C4 "frequency setting voltage gain" value must be set. (Refer to next page (2).)

## REMARKS

To change the value to more than 50 Hz , Pr. 1 "maximum frequency" must be set to more than 50 Hz .

Changingexample Changing the calibration parameter C4 "frequency setting voltage gain" value
POINT
The calibration parameter C 4 is an extended function parameter. Pr. 30 must be set to "1".
(2) Adjusting a deviation of the highest frequency from the Pr. 38 (Pr. 39) setting. (2)-1 Making adjustment with a voltage applied directly across terminals 2-5 (with a current flowing across terminals 4-5) Operation

1. Confirm the RUN indication and operation mode indication.

- The inverter must be at a stop.
- The inverter must be in the PU operation mode.
(Press the $\left(\frac{P U}{E X T}\right)$ )

2. Press the to choose the parameter setting mode.
3. Turn the $\bigcirc$ to show " -

- Pr. 30 must be set to "1".
(For the Pr. 30 setting method, refer to the instruction manual (basic).)
(The parameter
 number read previously appears.

4. Press the seri to show " $L_{-}^{-}$-".

When adjusting Pr. 38
5. Turn the $\bigcirc$ until the calibration parameter C4 "frequency setting voltage gain" appears.
6. Press the setr to show the analog voltage value (\%).
7. Apply a 5 V voltage. (Turn the external potentiometer connected to across terminals 2-5 to the maximum (any position).)

*The value is nearly 100 (\%) in the maximum position of the potentiometer.

## CAUTION

After performing operation in step 7, do not touch the until completion of calibration.
8. Press the to set the value.

Flicker ... Parameter setting complete!!
(Adjustment complete)
*The value is nearly 100 (\%) in the maximum position of the potentiometer.

- By turning the $\bigcirc$, you can read another parameter.
- Press the SET to return to the - indication (step 4).
- Press the set twice to show the next parameter (ir).
? The frequency meter (indicator) connected to across terminals AM-5 does not indicate just 40 Hz ... Why?

The calibration parameter C1 "AM terminal calibration" value must be set.
(For the setting method, refer to the instruction manual (basic).)
? When write is performed, an error $(\underline{\xi},-\bar{Z})$ is displayed.
$0^{\circ}$ The gain and bias frequency settings are too close.

## (2)-2 Making adjustment at any point with a voltage not applied across

 terminals 2-5 (without a current flowing across terminals 4-5)
## Operation

1. Confirm the RUN indication and operation mode indication.

- The inverter must be at a stop.
- The inverter must be in the PU operation mode.
(Press the $\frac{\mathrm{P}}{\mathrm{EXT}}$ )

2. Press the to choose the parameter setting mode.
3. Turn the 〇 to show " $[$. . ".

- Pr. 30 must be set to "1".
(For the Pr. 30 setting method, refer to the instruction manual (basic).)

4. Press the set to show ":-".

When adjusting Pr. 38
5. Turn the $\bigcirc$ until the calibration parameter C4 "frequency setting voltage gain" appears.
6. Press the ser to show the analog voltage value (\%).
(The maximum value can be displayed by merely turning the clockwise or counterclockwise in this status by one pulse's worth of turns (there is tactile feedback because of the notch type).)
7. Turn the $\bigcirc$ to the maximum value ( $100 \%$ ) or any point.
8. Press the set to set the value.

*The value is 100 (\%) in the maximum position of the potentiometer.

Flicker ... Parameter setting complete!!
*The value is 100 (\%) in the maximum position of the potentiometer.
-Turn the $\bigcirc$ to read another parameter.

- Press the (ser) to return to the $I_{-}^{-}$-indication (step 4).

## REMARKS

For the way to change the output frequency setting of the frequency setting potentiometer, refer to the instruction manual (basic).

### 2.3.19 Start-time earth fault detection selection (Pr. 40 파t)

You can choose whether to make earth fault detection at start valid or invalid.
Earth fault detection is executed only right after the start signal is input to the inverter.
Protective function will not activate if an earth fault occurs during operation.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 40 | Start-time earth <br> fault detection <br> selection | 1 | 0,1 | 0: Earth fault detection for <br> protection is not executed. <br> $1:$ Earth fault detection for <br> protection is executed. |  |
| Setting is <br> enabled when <br> Pr. 30 = "1". |  |  |  |  |  |

1. If an earth fault is detected with " 1 " set in Pr. 40, alarm output "に" is detected and the output is shut off.
2. If the motor capacity is less than 0.1 kW , earth fault protection may not be provided.

## REMARKS

When an earth fault is detected with "1" set in Pr. 40, an approximate 20ms delay occurs at every start.

### 2.4 Output terminal function parameters

### 2.4.1 Up-to-frequency (Pr. 41 एप:

The ON range of the up-tofrequency signal (SU) output when the output frequency reaches the running frequency can be adjusted between 0 and $\pm 100 \%$ of the running frequency. This parameter can be used to ensure that the running frequency has been reached to provide the operation start signal etc. for related equipment.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :--- |
| 41 | Up-to-frequency | $10 \%$ | 0 to $100 \%$ | Setting is enabled when Pr. 30 = "1". |

Use Pr. 64 or Pr. 65 (output terminal function selection) to assign the terminal used for SU signal output.

[^2]
### 2.4.2 Output frequency detection (Pr. 42 판, Pr. 43 믈)

The output frequency detection signal (FU) is output when the output frequency reaches or exceeds the setting. This function can be used for electromagnetic brake operation, open signal, etc. You can also set the detection of the frequency used exclusively for reverse rotation.
This function is effective for switching the timing of electromagnetic brake operation between forward rotation (rise) and reverse rotation (fall) during vertical lift operation, etc.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |  |
| :---: | :--- | :---: | :---: | :---: | :--- |
| 42 | Output frequency <br> detection | 6 Hz | 0 to 120 Hz | - | Setting is <br> enabled when |
| 43 | Output frequency <br> detection for reverse <br> rotation | $\ldots-$ | 0 to 120 Hz, | $--:$ Same as |  |
| Pr. 42 setting |  |  |  |  |  | | Pr. $30=11$. |
| :--- |

## <Setting>

Refer to the above chart and set the corresponding parameters.
-When Pr. 43 "output frequency detection for reverse rotation" $\neq$ "- - -", the Pr. 42 setting applies to forward rotation and the Pr. 43 setting applies to reverse rotation.

- Use Pr. 64 or Pr. 65 (output terminal function selection) to assign the terminal used for FU signal output.

## CAUTION

Using Pr. 64 or Pr. 65 to change the terminal assignment may affect the other functions. Make setting after confirming the function of each terminal.

```
P46 Refer to P O
P47}=>\mathrm{ Refer to 园 (page 63).
```

### 2.5 Current detection function parameters

### 2.5.1 Output current detection functions <br> 

If the output remains higher than the Pr. 48 setting during inverter operation for longer than the time set in Pr. 49, the output current detection signal (Y12) is output from the inverter's open collector output or contact output terminal.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 48 | Output current <br> detection level | $150 \%$ | 0 to $200 \%$ | Setting is enabled when <br> Pr. $30=$ "1" |
| 49 | Output current <br> detection period | 0 s | 0 to 10 s |  |

<Setting>

| Parameter <br> Number | Description |
| :---: | :--- |
| 48 | Set the output current detection level. <br> $100 \%$ is the rated inverter current. |
| 49 | Set the output current detection period. Set the time from when the output <br> current has risen above the Pr. 48 setting until the output current detection <br> signal (Y12) is output. |

Use Pr. 64 or Pr. 65 (output terminal function selection) to assign the terminal used for Y12 signal output.

## CAUTION

-Once turned ON, when the output current has risen above the preset detection level, the output current detection signal is held for at least 100 ms (approximately).
-Using Pr. 64 or Pr. 65 (output terminal function selection) to change terminal assignment may affect the other functions. Make setting after confirming the function of each terminal.

## $\bullet$ Related parameters $\downarrow$

- Assignment of Y 12 signal to terminal $\Rightarrow$ Pr. 64 "RUN terminal function selection", Pr. 65 "A, B, C terminal function selection" (refer to page 98)

### 2.5.2 Zero current detection (Pr. 50 P5R, Pr. 51 P5:

When the inverter's output current falls to " $0[\mathrm{~A}]$ ", torque will not be generated. This may cause a gravity drop when the inverter is used in vertical lift application.

To prevent this, the output current "zero" signal can be output from the inverter to close the mechanical brake when the output current has fallen to " $\mathrm{O}[\mathrm{A}]$ ".

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :--- | :---: | :---: | :---: |
| 50 | Zero current detection level | $5 \%$ | 0 to 200\% | Setting is enabled when |
| 51 | Zero current detection period | 0.5 s | 0.05 to 1 s | Pr. $30=" 1 "$ |

## POINT

If the output is lower than the Pr. 50 setting for longer than the time set in Pr. 51 during inverter operation, the zero current detection (Y13) signal is output from the inverter's open collector output terminal or contact output terminal.

## <Setting>

| Parameter | Description |
| :---: | :--- |
| 50 | Set the zero current detection level. <br> Set the level of zero current detection in terms of the percentage of the rated <br> inverter current from the output current value of 0 [A]. |
| 51 | Set the zero current detection period. <br> Set a period of time from when the output current falls to or below the Pr. 50 <br> setting to when the zero current detection signal (Y13) is output. |

Use Pr. 64 or Pr. 65 (output terminal function selection) to assign the terminal used for Y13 signal output.

[^3]
### 2.6 Display function parameters

### 2.6.1 Monitor display (Pr. 52 ( 5 EA, Pr. 54 [54 )

You can choose the display of the operation panel "monitor/frequency setting screen".

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 52 | Operation panel <br> display data <br> selection | 0 | $0,1,100$ | Setting is enabled when Pr. $30=$ " $1 "$ |
| 54 | AM terminal function <br> selection | 0 | 0,1 |  |

## POINT

- You can also use the (SET) to change the display. (Refer to the instruction manual (basic) for the operation procedure.)
-The analog current output terminal AM is available for signal output. (Make selection using the Pr. 54 "AM terminal function selection" value.)

## <Setting>

| Signal Type | Unit | Parameter Setting |  | Full-Scale Value of AM <br> Level Meter |
| :--- | :---: | :---: | :---: | :---: |
|  |  | Pr. 52 |  |  |
|  | Operation panel <br> LED | AM terminal |  |  |
| Output frequency | Hz | $0 / 100$ | 0 | Pr. 55 "frequency monitoring <br> reference" |
| Output current | A | 1 | 1 | Pr. 56 "current monitoring <br> reference" |

When "100" is set in Pr. 52, the monitored values during stop and during operation differ as indicated below.

|  | Pr. 52 |  |  |
| :---: | :---: | :---: | :---: |
|  | $\mathbf{0}$ | During stop | During running |
|  | During running/stop | Dutput frequency |  |

## REMARKS

-During an error, its definition appears.
-During reset, the values displayed are the same as during a stop.
-For selection of the parameter unit (FR-PU04) monitor display, refer to the communication parameter n16 "PU main display screen data selection". (Page 150)

## CAUTION

## The unit displayed on the operation panel is only A and other units are not displayed.

## $\bullet$ Related parameters

- Speed display $\Rightarrow$ Pr. 37 "speed display" (refer to page 79)
- Adjustment of level meter full-scale value $\Rightarrow$ Calibration parameter C1 "AM terminal calibration" (refer to page 124)
- Monitoring reference $\Rightarrow$ Pr. 55 "frequency monitoring reference", Pr. 56 "current monitoring reference" (refer to page 90)

### 2.6.2 Setting dial function selection (Pr. 53 표․ $)$

| You can use the dial like a potentiometer to perform operation.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 53 | Frequency setting <br> operation selection | 0 | 0,1 | 0: Setting dial <br> frequency setting <br> mode <br> $1:$Sedting dial <br> potentiometer modeSetting is <br> enabled when <br> Pr. 30 = $1 "$ |  |

## Using the setting dial like a potentiometer to perform operation

## POINT

-Set "1" (extended function parameter valid) in Pr. 30 "extended function display selection".

- Set "1" (setting dial potentiometer mode) in Pr. 53 "frequency setting operation selection".

## Operation example Changing the frequency from 0 Hz to 50 Hz during operation

-If flickering "50.0" turns to "0.0", the Pr. 53 "frequency setting operation selection" setting may not be "1".

- Independently of whether the inverter is running or at a stop, the frequency can be set by merely turning the dial.
-When the frequency is changed, it will be stored as the set frequency after 10s.
Refer to (page 88).

### 2.6.3 Monitoring reference (Pr. 55 P55, Pr. 56 P5S)

Set the frequency or current which is referenced when the output frequency or output current is selected for the terminal AM.

| Parameter | Name | Factory Setting | Setting <br> Range | Remarks |
| :---: | :--- | :---: | :---: | :---: |
| 55 | Frequency monitoring <br> reference | 50 Hz | 0 to 120 Hz | Setting is enabled when <br> Pr. $30=" 1 "$ |
| 56 | Current monitoring <br> reference | Rated output <br> current | 0 to 50 A | R |

## <Setting>

Refer to the above diagrams and set the frequency monitoring reference value in
Pr. 55 and the current monitoring reference value in Pr. 56.
Pr. 55 is set when Pr. 54 "AM terminal function selection" $=$ " 0 " and Pr. 56 is set when Pr. 54 = "1".
In Pr. 55 and Pr. 56, set the frequency and current at which the output voltage of terminal AM will be 5 V .

## CAUTION

The maximum output voltage of terminal AM is 5VDC.

### 2.7 Restart operation parameters

### 2.7.1 Restart setting (Pr. 57 P57, Pr. 58 P5回, H6 H 5)

At power restoration after an instantaneous power failure, you can restart the inverter without stopping the motor (with the motor coasting).

| Parameter | Name | Factory Setting | Setting Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 57 | Restart coasting time | --- | 0 to 5 s , | Setting is enabled when Pr. $30=11 "$ |
| 58 | Restart cushion time | 1 s | 0 to 60s |  |
| H6 (162) | Automatic restart after instantaneous power failure selection | 1 | 0, 1, 10 |  |

The parameter number in parentheses is the one for use with the parameter unit (FR-PU04).

## <Setting>

Refer to the following table and set the parameters:

| Parameter | Setting |  | Description |  |
| :---: | :---: | :---: | :---: | :---: |
| 57 | 0 | 0.1 K to 1.5 K | Coasting time of 0.5s | Generally, this setting will pose no problems. |
|  |  | 2.2K, 3.7K | Coasting time of 1.0s |  |
|  |  | 0.1 to 5s | Waiting time for inverter-triggered restart after power is restored from an instantaneous power failure. (Set this time between 0.1 and 5 s according to the moment $(\mathrm{J})$ of inertia and torque of the load.) |  |
| 58 |  |  | No restart (factory setting) |  |
|  |  | 0 to 60s | Normally the motor may be run with the factory settings. These values are adjustable to the load (moment of inertia, torque). |  |
| H6 (162) |  | 0 | With speed search <br> The motor coasting speed is detected after instantaneous power failure is detected. |  |
|  |  | 1 | Without speed search (factory setting) Automatic restart operation after instantaneous power failure is a reduced voltage starting system in which the output voltage is risen gradually at the preset frequency independently of the coasting speed of the motor. |  |
|  |  | 10 | With speed search at starting <br> The motor coasting speed is detected after instantaneous power failure and at starting. |  |

*The output shut off timing differs according to the load condition.

## REMARKS

-When the start signal is turned off during power failure and power is restored
Without speed search $(\mathrm{H} 6=1)$ : Decelerates to stop after running in the same direction before power failure. Note that the motor will coast if the start signal is turned off during restart operation.
If the start signal turns on upon power restoration, the inverter starts at the starting frequency (Pr. 13). Keep the starting signal on during power failure.
With speed search $(\mathrm{H} 6=0,10)$ : The motor will coast.
-With speed search $(H 6=0,10)$

- It will start at the starting frequency (Pr.13) when the speed search is less than 10 Hz .
- Restart operation is also performed after the inverter reset and retry reset.
- The motor starts at the starting frequency when an instantaneous power failure occurs during restart voltage cushion time.
-When the special motor is used, speed search can not be performed, the motor may start at the starting frequency.
-When speed search is selected $(\mathrm{H} 6=0)$, automatic restart operation at a start is first performed after powering on and normal restart is performed thereafter.
When speed search at starting $(\mathrm{H} 6=10)$ is selected, restart operation is performed at each starting.
There is delay time (Pr. 57 setting + speed search time) until frequency is output after the start command is input during restart operation.
- If two or more motors are connected to one inverter, speed search is not performed properly. Select without speed search (H6=1)
-The SU and FU signals are not output during a restart. They are output after the restart cushion time has elapsed.
— CAUTION
For the restart after instantaneous power failure operation without speed search (H6=1), the state (output frequency, rotation direction) before an instantaneous power failure cannot be stored in memory if the instantaneous power failure time is 0.2 s or longer (changes according to the motor load condition) and the inverter restarts at the starting frequency (Pr.13).

## ACAUTION

When automatic restart after instantaneous power failure has been selected, the motor and machine will start suddenly (after the restart coasting time has elapsed) after occurrence of an instantaneous power failure. Stay away from the motor and machine.
When you have selected automatic restart after instantaneous power failure, apply in easily visible places the CAUTION stickers supplied to the instruction manual (basic).
The motor is coasted to a stop as soon as you turn off the start signal or press the $\frac{S T O P}{\text { RESEI }}$ during the restart cushion time after instantaneous power failure.

## - Related parameters

$\bullet$ Retry reset $\Rightarrow$ Pr. 66 to Pr. 69 (retry function) (Refer to page 99.)

### 2.8 Additional function parameters

### 2.8.1 Remote setting function selection (Pr. 59 (159)

If the operation panel is located away from the control box, you can use contact signals to perform continuous variable-speed operation, without using analog signals.

Power supply

* External running frequency (other than multi-speed) or PU running frequency

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 59 | Remote setting <br> function selection | 0 | $0,1,2$ | Setting is enabled when Pr. $30=" 1 "$ |

## REMARKS

-When the remote function is used, the output frequency of the inverter can be compensated for as follows:
External operation mode
Frequency set by RH/RM operation plus external analog frequency command
PU operation mode Frequency set by RH/RM operation plus setting dial or PU digital preset frequency
<Operation panel operation procedure>
Monitor, frequency
setting mode MODE
Turn the setting dial to make correction. $\Rightarrow$
Press the
 complete setting.*

* When you have set "1" in Pr. 53 "frequency setting operation selection", you need not press the SET .
<Setting>

| Pr. 59 Setting | Operation |  |
| :---: | :---: | :---: |
|  | Remote setting function | Frequency setting storage <br> function (E2PROM) |
| 0 | No | - |
| 1 | Yes | Yes |
| 2 | Yes | No |

- Use Pr. 59 to select whether the remote setting function is used or not and whether the frequency setting storage function* in the remote setting mode is used or not. When "remote setting function - yes" is selected, the functions of signals RH, RM and RL are changed to acceleration (RH), deceleration (RM) and clear (RL), respectively. Use Pr. 60 to Pr. 63 (input terminal function selection) to set the signals RH, RM, RL.
* Frequency setting storage function

This function stores the remotely-set frequency (frequency set by RH/RM operation) into memory.
When power is switched off once, then on, operation is resumed with that output frequency value. (Pr. 59="1")

## <Frequency setting storage conditions>

- The frequency at which the start signal (STF or STR) turns off is stored.
-The remotely-set frequency is stored every one minute after one minute has elapsed since turn off (on) of both the RH (acceleration) and RM (deceleration) signals. (The frequency is written if the present frequency setting compared with the past frequency setting every one minute is different.) (The state of the RL signal dose not affect writing.)

## REMARKS

-This function is invalid under jog operation and PID control operation.

## Setting frequency is "0"

-Even when the remotely-set frequency is cleared by turning on the RL (clear) signal after turn off (on) of both the RH and RM signals, the inverter operates at the remotely-set frequency stored in the last operation if power is reapplied before one minute has elapsed since turn off (on) of both the RH and RM signals

-When the remotely-set frequency is cleared by turning on the RL (clear) signal after turn off (on) of both the RH and RM signals, the inverter operates at the speed in the remotely-set frequency cleared state if power is reapplied after one minute has elapsed since turn off (on) of both the RH and RM signals.

CAUTION
-The frequency can be varied by RH (acceleration) and RM (deceleration) between 0 and the maximum frequency (Pr. 1 setting).
-When the acceleration or deceleration signal switches on, the set frequency varies according to the slope set in Pr. 44 "second acceleration/deceleration time" or Pr. 45 "second deceleration time". The output frequency acceleration and deceleration times are as set in Pr. 7 "acceleration time" and Pr. 8 "deceleration time", respectively. Therefore, the longer preset times are used to vary the actual output frequency.
olf the start signal (STF or STR) is off, turning on the acceleration (RH) or deceleration (RM) signal varies the preset frequency.

## $\triangle$ CAUTION

When selecting this function, re-set the maximum frequency according to the machine.

## - Related parameters

- RH, RM, RL signal terminal assignment $\Rightarrow \quad$ Pr. 60 to Pr. 63 (input terminal function selection) (Refer to page 96.)
- Maximum frequency setting $\Rightarrow$ Pr. 1 "maximum frequency" (Refer to page 62.)
- Output frequency acceleration/deceleration time $\Rightarrow$ Pr. 7 "acceleration time",

Pr. 8 "deceleration time" (Refer to page 65.)

- Time setting for acceleration/deceleration $\Rightarrow$ Pr. 44 "second acceleration/deceleration time", Pr. 45 "second deceleration time" (Refer to page 65.)

### 2.9 Terminal function selection parameters

### 2.9.1 Input terminal function selection (Pr. 60 P6R, Pr. 61 PEI, 

Use these parameters to select/change the input terminal functions.

| Parameter | Name | Factory <br> Setting | Setting Range | Remarks |
| :---: | :--- | :---: | :---: | :---: |
| 60 | RL terminal function <br> selection | 0 |  |  |
| 61 | RM terminal function <br> selection | 1 |  | Setting is enabled <br> when Pr. $30=1 "$ |
| 62 | RH terminal function <br> selection | 2 |  |  |
| 63 | STR terminal function <br> selection | $\cdots-$ | 0 to $10,14,16, \cdots$ |  |

<Setting>
Refer to the following table and set the parameters:

| Setting | Signal Name | Functions |  | Related Parameters |
| :---: | :---: | :---: | :---: | :---: |
| 0 | RL | Pr. 59 = "0" | Low-speed operation command | $\begin{aligned} & \text { Pr. } 4 \text { to Pr. 6, Pr. } 24 \text { to Pr. 27, } \\ & \text { Pr. } 80 \text { to Pr. } 87 \end{aligned}$ |
|  |  | Pr. 59 = "1", "2" (*1) | Remote setting (setting clear) | Pr. 59 |
| 1 | RM | Pr. 59 = "0" | Middle-speed operation command | $\begin{aligned} & \text { Pr. } 4 \text { to Pr. 6, Pr. } 24 \text { to Pr. } 27, \\ & \text { Pr. } 80 \text { to Pr. } 87 \end{aligned}$ |
|  |  | Pr. 59 = "1", "2" (*1) | Remote setting (deceleration) | Pr. 59 |
| 2 | RH | Pr. 59 = "0" | High-speed operation command | $\begin{aligned} & \text { Pr. } 4 \text { to Pr. 6, Pr. } 24 \text { to Pr. 27, } \\ & \text { Pr. } 80 \text { to Pr. } 87 \end{aligned}$ |
|  |  | Pr. 59 = "1", "2" (*1) | Remote setting (acceleration) | Pr. 59 |
| 3 | RT | Second function selection |  | Pr. 44 to Pr. 47, H7 |
| 4 | AU | Current input selection |  | $\underline{-}$ |
| 5 | STOP | Start self-holding selection |  | - |
| 6 | MRS | Output shut-off stop |  | - |
| 7 | OH | External thermal relay input (*2) The inverter stops when the externally provided thermal relay for overheat protection, motor's embedded temperature relay etc. is actuated. |  | Refer to page 158. |
| 8 | REX | 15 -speed selection (combination with 3 speeds RL, RM, RH) (*3) |  | $\begin{aligned} & \text { Pr. } 4 \text { to Pr. 6, Pr. } 24 \text { to Pr. 27, } \\ & \text { Pr. } 80 \text { to Pr. } 87 \end{aligned}$ |
| 9 | JOG | Jog operation selection |  | Pr. 15, Pr. 16 |
| 10 | RES | Reset |  | Pr. 75 |
| 14 | X14 | PID control presence/absence selection |  | Pr. 88 to Pr. 94 |
| 16 | X16 | PU-external operation switch-over |  | Pr. 79 (setting: 8) |
| --- | STR | Reverse rotation start |  | (can be assigned to STR terminal (Pr. 63) only) |

*1.When Pr. 59 = "1 or 2", the functions of the RL, RM and RH signals change as listed above.
*2.Actuated when the relay contact "opens".
*3. When using the REX signal, an external command cannot be used to make a reverse rotation start.

## REMARKS

- One function can be assigned to two or more terminals. In this case, the function is activated when one of the multiple terminals used for assignment turns on.
-The speed command priorities are higher in order of jog, multi-speed setting (RH, RM, RL, REX) and AU.
-Use common terminals to assign multi-speeds (7 speeds) and remote setting. They cannot be set individually.
(Common terminals are used since these functions are designed for speed setting and need not be set at the same time.)

### 2.9.2 Output terminal function selection (Pr. 64 P54, Pr. 65 P5S)

You can change the functions of the open collector output terminal and contact output terminal.

| Parameter | Name | Factory <br> Setting | Setting Range | Remarks |
| :---: | :--- | :---: | :---: | :---: |
| 64 | RUN terminal function <br> selection | 0 | $0,1,3,4,11$ to <br> $16,93,95,98,99$ | Setting is enabled <br> when Pr. $30=" 1 "$ <br> 65A, B, C terminal function <br> selection |

## <Setting>

| Setting | Signal <br> Name | Function | Operation | Parameters <br> Referred to |
| :---: | :---: | :--- | :--- | :--- |
| 0 | RUN | Inverter running | Output during operation when the <br> inverter output frequency rises to <br> or above the starting frequency. | Pr. 2, Pr. 13 |
| 1 | SU | Up to frequency | Output when the output frequency <br> is reached. | Pr. 41 |
| 3 | OL | Overload alarm | Output while stall prevention <br> function is activated. | Pr. 21, Pr. 22, <br> Pr. 23, Pr. 28 |
| 4 | FU | Output frequency <br> detection | Output when the output frequency <br> rises to or above the setting. | Pr. 42, Pr. 43 |
| 11 | RY | Inverter operation <br> ready | Output when the inverter is ready <br> to be started by switching the <br> start signal on. | - |
| 13 | Y13 | Zero current detection <br> detection | Output when the output current <br> rises to or above the setting. | Pr. 48, Pr. 49 |
| reaches 0. |  |  |  |  |

### 2.10 Operation selection function parameters

## 

When any protective function (major fault) is activated and the inverter stops its output, the inverter itself resets automatically and performs retries. Whether retry is performed or not, alarms reset for retry, number of retries made and waiting time can be selected.
When you have selected automatic restart after instantaneous power failure (with speed search), restart operation is performed at the retry operation time which is the same of that of a power failure. (Refer to page 90 for automatic restart function.)

| Parameter | Name | Factory Setting | Setting Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 66 | Retry selection | 0 | 0 to 3 | Setting is enabled when Pr. $30=11 "$ |
| 67 | Number of retries at alarm occurrence | 0 | $\begin{aligned} & 0,1 \text { to } 10, \\ & 101 \text { to } 110 \end{aligned}$ |  |
| 68 | Retry waiting time | 1s | 0.1 to 360s |  |
| 69 | Retry count display erase | 0 | 0 |  |

## <Setting>

-Use Pr. 66 to select the protective functions (major faults) to be activated for retries.

| Pr. 66 | Protective Functions (Major Faults) for Retries |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Setting | OCT | OVT | THM | THT | FIN | GF | OHT | OLT | PE | PUE | RET | CPU | OPT |
| 0 | - | - | - | - |  | - | - | - | - |  |  |  | $\bigcirc$ |
| 1 | $\bullet$ |  |  |  |  |  |  |  |  |  |  |  |  |
| 2 |  | - |  |  |  |  |  |  |  |  |  |  |  |
| 3 | - | - |  |  |  |  |  |  |  |  |  |  |  |

* O Indicates the retry items selected. (OCT denotes any of OC1 to OC3 and OVT any of OV1 to OV3.)
- Use Pr. 67 to set the number of retries at alarm occurrence.

| Pr. 67 Setting | Number of Retries | Alarm Signal Output |
| :---: | :---: | :---: |
| 0 | Retry is not made. | Not output every time ${ }^{*}$ |
| 1 to 10 | 1 to 10 times | Output every time |
| 101 to 110 | 1 to 10 times |  |

* If the retry count is exceeded, " $\boldsymbol{- E 丿 -}$ " (retry count over) is displayed.
-Use Pr. 68 to set the waiting time from when an inverter alarm occurs until a restart in the range 0.1 to 360 s .
-Reading the Pr. 69 value provides the cumulative number of successful restart times made by retry. The cumulative number of time is cleared when setting value " 0 " is written.

## CAUTION

-The cumulative number in Pr. 69 is incremented by "1" when retry operation is regarded as successful, i.e. when normal operation is continued without the protective function (major fault) activated during a period four times longer than the time set in Pr. 68.
-If the protective function (major fault) is activated consecutively within a period four times longer than the above waiting time, the operation panel may show data different from the most recent data or the parameter unit (FR-PU04) may show data different from the first retry data. The data stored as the error reset for retry is only that of the protective function (major fault) which was activated the first time.
-When an inverter alarm is reset by the retry function at the retry time, the stored data of the electronic thermal relay function, etc. are not cleared. (Different from the power-on reset.)

## \.CAUTION

When you have selected the retry function, stay away from the motor and machine unless required. They will start suddenly (after the reset time has elapsed) after occurrence of an alarm.
When you have selected the retry function, apply in easily visible places the CAUTION stickers supplied to the instruction manual (basic).

### 2.10.2 PWM carrier frequency and long wiring mode (Pr. 70 [开田, Pr. 72 (rote)

You can change the motor sound.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :--- |
| 70 | Soft-PWM setting | 1 | $0,1,10,11$ | Setting is enabled when |
| 72 | PWM frequency selection | 1 | 0 to 15 | Pr. $30=" 1 "$ |

## <Setting>

- By parameter setting, you can set whether to exercise Soft-PWM control that changes the motor tone or select with or without long wiring mode.
- Soft-PWM control is a control system that changes the motor noise from a metallic tone into an unoffending complex tone.
- Surge voltage is suppressed regardless of wiring length in the long wiring mode. (When operating the 400 V motor with wiring length of 40 m or longer, select the long wiring mode.)

| Pr.70 <br> Setting | Description |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Soft-PWM | Long wiring mode | Remarks |  |
| 0 | Invalid | Invalid |  |  |
| 1 | Valid <br> (When Pr. 72 setting <br> = any of "0" to "5") | Invalid |  |  |
| 10 | Invalid | Valid | - When Pr. 72 "PWM frequency <br> selection" = 1 or more, the PWM <br> carrier frequency is constant at <br> 1 kHz . (When "0" is set, the PWM <br> carrier frequency is constant at <br> 0.7kHz.) |  |
| 11 | Valid | Valid |  |  |

## CAUTION

1. The output voltage at the rated frequency drops by a maximum of 5 V .
2.For the 400 V class, use an insulation-enhanced motor.

Refer to page 19 for an inverter-driven 400 V class motor.

| Pr.72 Setting | Description |
| :---: | :--- |
| 0 to 15 | PWM carrier frequency can be changed. <br> The setting displayed is in $[\mathrm{kHz]}$. <br> Note that 0 indicates 0.7 kHz and 15 indicates 14.5 kHz.${ }^{2}$ |

## REMARKS

-An increased PWM frequency will decrease the motor sound but increase noise and leakage currents. Therefore, perform the reduction techniques. (Refer to page 16.)

- Metallic sound may be generated from the motor at sudden deceleration but it is not a fault.

Prial Refer to 9 (page 67).

### 2.10.3 Voltage input selection (Pr. 73 맠ㄹ)

You can change the input (terminal 2) specifications according to the frequency setting voltage signal. When entering 0 to 10VDC, always make this setting.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |  |
| :---: | :---: | :---: | :---: | :--- | :--- |
| 73 | $0-5 \mathrm{~V} / 0-10 \mathrm{~V}$ <br> selection | 0 | 0,1 | Terminal 2 input voltage <br> $0: 0-5 \mathrm{VDC}$ input <br> $1: 0-10 \mathrm{VDC}$ input | Setting is enabled <br> when Pr. 30 $=" 1 "$ |

CAUTION
-The acceleration/deceleration time, which is a slope up/down to the acceleration/deceleration reference frequency, is not affected by the change in Pr. 73 setting.
-When connecting a frequency setting potentiometer across terminals 10-2-5 for operation, always set " 0 " in this parameter.

### 2.10.4 Input filter time constant (Pr. 74 파막)

You can set the input section's built-in filter constant for an external voltage or current frequency setting signal.

- Effective for eliminating noise in the frequency setting circuit.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 74 | Input filter time <br> constant | 1 | 0 to 8 | Setting is enabled when Pr. 30 = "1" |

## <Setting>

Increase the filter time constant if steady operation cannot be performed due to noise. A larger setting results in slower response. (The time constant can be set between approximately 1 ms to 1 s with the setting of 0 to 8 . A larger setting results in a larger filter time constant.)

### 2.10.5 Reset selection/PU stop selection (Pr. 75 Prtas)

You can make reset input acceptance selection and choose the stop function from the operation panel (PU).

- Reset selection :You can choose the reset function input (RES signal) timing.
- PU stop selection :When an alarm etc. occurs in any operation mode, you can make a stop from the operation panel by pressing the $\frac{\text { STOP }}{\text { RESET }}$.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 75 | Reset selection/ <br> PU stop selection | 14 | $0,1,14,15$ | Setting is enabled when Pr. $30=" 1 "$ |

## <Setting>

| $\begin{gathered} \text { Pr. } 75 \\ \text { Setting } \end{gathered}$ | Reset Selection | PU Stop Selection |
| :---: | :---: | :---: |
| 0 | Reset input normally enabled. | The PU stop key is invalid. Note that theSTOP <br> RESET is valid only in the PU operation mode or combined operation mode (Pr. $79=44$ "). |
| 1 | Enabled only when the protective function is activated. |  |
| 14 | Reset input normally enabled. | Pressing the $\frac{\text { STOP }}{\text { RESET }}$ decelerates the inverter to a stop in any of the PU, external and communication operation modes. |
| 15 | Enabled only when the protective function is activated. |  |

## (1) How to make a restart after a stop by the $\frac{S T O P}{\text { RESET }}$ input from the operation panel (Restarting method with

1. After completion of deceleration to a stop, switch off the STF or STR signal.
2. Press the $\frac{\mathrm{PU}}{\mathrm{EXT}}$ to show PU
(■) canceled)
3. Press the $\left(\frac{P U}{E X T}\right)$ to return to EXT .
4. Switch on the STF or STR signal.

Stop and restart example for external operation

## REMARKS

- If the reset signal (RES) is provided during operation, the inverter shuts off its output while it is reset, the internal thermal integrated value of the electronic thermal relay function and the number of retries are reset, and the motor coasts.
-The Pr. 75 value can be set any time. Also, if parameter (all) clear is executed, this setting will not return to the initial value.
-When the inverter is stopped by the PU stop function, the display alternates between $\square_{\text {- }}$ and Tin. An alarm is not output.
(2) How to make a restart when a stop is made by the $\begin{aligned} & \text { STOP } \\ & \text { RESET }\end{aligned}$ input from the PU

1. After completion of deceleration to a stop, switch off the STF or STR signal.
2. Press the EXT.

OG canceled)
3. Switch on the STF or STR signal.

Stop and restart example for external operation

Besides the above operations, a restart can be made by performing a power-on reset or resetting the inverter with the inverter's reset terminal.

## REMARKS

- If the reset signal (RES) is provided during operation, the inverter shuts off its output while it is reset, the internal thermal integrated value of the electronic thermal relay function and the number of retries are reset, and the motor coasts.
-To resume operation, reset the inverter after confirming that the PU is connected securely.
-The Pr. 75 value can be set any time. Also, if parameter (all) clear is executed, this setting will not return to the initial value.
-When the inverter is stopped by the PU stop function, PS is displayed but an alarm is not output.

## $\triangle$ CAUTION

## Do not reset the inverter with the start signal on. <br> Otherwise, the motor will start instantly after resetting, leading to potentially hazardous conditions.

### 2.10.6 Cooling fan operation selection (Pr. 76 Prta)

You can control the operation of the cooling fan built in the inverter (whether there is a cooling fan or not depends on the model.).

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :--- |
| 76 | Cooling fan <br> operation <br> selection | 0 | 0,1 | 0: Operation is performed with <br> power on. <br> 1: Cooling fan ON/OFF control |
| Setting is <br> enabled when <br> Pr. $30=" 1 "$ |  |  |  |  |

<Setting>

| Setting | Description |
| :---: | :---: |
| 0 | Operated at power on (independent of whether the inverter is running or at a stop). |
| 1 | Cooling fan ON/OFF control valid <br> Always on during inverter operation <br> During stop (reset or error), the inverter status is monitored and the fan is switched on/off according to the temperature. <br> - Heatsink temperature is less than $40^{\circ} \mathrm{C}$ $\qquad$ Cooling fan off <br> - Heatsink temperature is not less than $40^{\circ} \mathrm{C}$ $\qquad$ Cooling fan on |

## REMARKS

In either of the following cases, fan operation is regarded as faulty, $F \rightarrow$ is shown on the operation panel, and the minor fault (LF) signal is output. Use any of Pr. 64, Pr. 65 (output terminal function selection) to allocate the terminal used to output the LF signal.*

- Pr. $76=$ "0"

When the fan comes to a stop with power on.

- Pr. $76=" 1 "$

When the inverter is running and the fan stops during fan ON command.
CAUTION

* When the terminal assignment is changed using Pr. 64, Pr. 65, the other functions may be affected. Confirm the functions of the corresponding terminals before making settings.

### 2.10.7 Parameter write disable selection (Pr. 77 PTr $)$

You can select between write-enable and disable for parameters. This function is used to prevent parameter values from being rewritten by incorrect operation.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :--- | :---: | :---: | :---: |
| 77 | Parameter write disable <br> selection | 0 | $0,1,2$ | Setting is enabled when Pr. $30=" 1 "$ |

## <Setting>

| Pr. 77 Setting | Function |
| :---: | :--- |
| 0 | Write is enabled only during a stop in the PU operation mode. (*) |
| 1 | Write disabled. <br> Values of Pr. 22, Pr. 30, Pr. 75, Pr. 77 and Pr. 79 can be written. |
| 2 | Write is enabled even during operation. Write is enabled independently of <br> the operation mode. |

## CAUTION

-*The shaded parameters in the parameter list always allow setting. Note that the Pr. 70 and Pr. 72 values may be changed during PU operation only. -lf Pr. 77 = 2, the values of Pr. 17, Pr. 23, Pr. 28, Pr. 60 to Pr. 63, Pr. 64, Pr. 65, Pr. 71, Pr. 79, Pr. 98, Pr. 99, CLr cannot be written during operation. Stop operation when changing their parameter settings.
-By setting "1" in Pr. 77, the following clear operations can be inhibited:

- Parameter clear
- All clear

### 2.10.8 Reverse rotation prevention selection (Pr. 78 (rnag)

This function can prevent reverse rotation faults resulting from the incorrect input of the start signal.

POINT
Used for a machine which runs only in one direction, e.g. fan, pump.
(The setting of this function is valid for the combined, PU, external and communication operations.)

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :--- | :---: | :---: | :---: |
| 78 | Reverse rotation <br> prevention selection | 0 | $0,1,2$ | Setting is enabled when Pr. $30=" 1 "$ |

## <Setting>

| Pr. 78 Setting | Function |
| :---: | :--- |
| 0 | Both forward and reverse rotations allowed |
| 1 | Reverse rotation disallowed |
| 2 | Forward rotation disallowed |

### 2.10.9 Operation mode selection (Pr. 79 파영)

Used to select the operation mode of the inverter.
The inverter can be run from the operation panel or parameter unit (PU operation), with external signals (external operation), or by combination of PU operation and external operation (external/PU combined operation).
The inverter is placed in the external operation mode at power on (factory setting).

| Parameter | Name | Factory Setting | Setting Range |
| :---: | :---: | :---: | :---: |
| 79 | Operation mode selection | 0 | 0 to 4, 7, 8 |

## <Setting>

In the following table, operation using the operation panel or parameter unit is abbreviated to PU operation.

| $\begin{gathered} \text { Pr. } 79 \\ \text { Setting } \end{gathered}$ | Function |  |  | LED Indication * $\underset{\text { RUN }}{\stackrel{\text { RUN }}{\text { RUN }}}$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |
| 0 | At power on, the inverter is put in the external operation mode. The operation mode can be changed between the PU and external operation modes from the operation panel ( $\left(\frac{P U}{E X T}\right)$ ) or parameter unit ( PU EXT ). For each mode, refer to the columns of settings 1 and 2. |  |  | Off: Stop without start command <br> Forward rotation: On Reverse rotation: Slow flickering $\left.\begin{array}{l}\text { With start } \\ \text { command } \\ \text { Without } \\ \text { frequency } \\ \text { setting }\end{array}\right\}$ Fast $\begin{aligned} & \text { flickering }\end{aligned}$ | Refer to settings "1" and "2". |  |
| 1 | Operation mode | Running frequency | Start signal |  | $\begin{array}{\|c} \text { On } \\ \text { (Off) } \end{array}$ | Off |
|  | PU operation mode | Setting from operation panel or FR-PU04 | RUN |  |  |  |
| 2 | External operation mode | External signal input (across terminals 2(4)-5, multi-speed selection) jog | External signal input (terminal STF, STR) |  | Off | On |
| 3 | External/ PU combined operation mode 1 | Setting dial of operation panel, digital setting by parameter unit key operation, or external signal input (multi-speed setting, across terminals 4-5 (valid when AU signal is on)) | External signal input (terminal STF, STR) |  | On | On |
| 4 | External/ PU combined operation mode 2 | External signal input (across terminals 2(4)-5, multi-speed selection, jog) | RUN |  |  |  |
| 7 | External operation mode (PU operation interlock) MRS signal ON... Switching to PU operation mode (output stop during external operation) allowed <br> MRS signal OFF.. Switching to PU operation mode inhibited |  |  |  | Refer to settings "1" and "2". |  |
| 8 | Operation mode change using external signal (disallowed during operation) <br> X16 signal ON .... Switched to external operation mode <br> X16 signal OFF......Switched to PU operation mode |  |  |  |  |  |  |

## REMARKS

- In other than the PU operation mode, the stop function (PU stop selection) activated by pressing $\frac{\text { STOP }}{\text { RESET }}$ ) of the PU (operation panel/FR-PU04) is valid. (Refer to page 103.)
-Either " 3 " or " 4 " may be set to select the PU/external combined operation, and these settings differ in starting method.
-Refer to page 128 for the computer link operation mode.
*When the FR-PU04 is connected, the LED indicators (PU, EXT) are not lit.
In the computer link operation mode, the LED indicators (PU, EXT) flicker slowly.

## (1) PU operation interlock

PU operation interlock forces the operation mode to be changed to the external operation mode when the MRS signal switches off. This function prevents the inverter from being inoperative by the external command if the mode is accidentally left unswitched from the PU operation mode.

## 1) Preparation

- Set "7" (PU operation interlock) in Pr. 79.
- Set the terminal used for MRS signal input with any of Pr. 60 to Pr. 63 (input terminal function selection).
Refer to page 96 for Pr. 60 to Pr. 63 (input terminal function selection).

## CAUTION

When terminal assignment is changed using Pr. 60 to Pr. 63, the other functions may be affected.
Check the functions of the corresponding terminals before making settings.

## 2) Function

| MRS Signal | Function/Operation |
| :---: | :--- |
| ON | Output stopped during external operation. <br> Operation mode can be switched to PU operation mode. <br> Parameter values can be rewritten in PU operation mode. <br> PU operation allowed. |
| OFF | Forcibly switched to external operation mode. <br> External operation allowed. <br> Switching to PU operation mode inhibited. |

## <Function/operation changed by switching on-off the MRS signal>

| Operating Condition |  | MRS Signal | Operation Mode (*2) | Operating Status | Parameter Write | Switching to PUOperation Mode |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Operation } \\ & \text { mode } \end{aligned}$ | Status |  |  |  |  |  |
| PU | During stop | $\mathrm{ON} \rightarrow \mathrm{OFF}$ <br> (*1) |  | During stop | Allowed $\rightarrow$ disallowed | Disallowed |
|  | During operation | $\underset{(* 1)}{\mathrm{ON} \rightarrow \mathrm{OFF}}$ | PU $\rightarrow$ <br> External | If external operation frequency setting and start signal are entered, operation is performed in that status. | Allowed $\rightarrow$ disallowed | Disallowed |
| External | During stop | OFF $\rightarrow$ ON | External | During stop | Disallowed $\rightarrow$ disallowed | Allowed |
|  |  | $\mathrm{ON} \rightarrow$ OFF |  |  | Disallowed $\rightarrow$ disallowed | Disallowed |
|  | During operation | $\mathrm{OFF} \rightarrow \mathrm{ON}$ |  | $\begin{gathered} \hline \text { During operation } \rightarrow \\ \text { output stop } \end{gathered}$ | Disallowed $\rightarrow$ disallowed | Disallowed |
|  |  | $\mathrm{ON} \rightarrow$ OFF |  | Output stop $\rightarrow$ operation | Disallowed $\rightarrow$ disallowed | Disallowed |

## REMARKS

- If the MRS signal is on, the operation mode cannot be switched to the PU operation mode when the start signal (STF, STR) is on.
*1. The operation mode switches to the external operation mode independently of whether the start signal (STF, STR) is on or off.
Therefore, the motor is run in the external operation mode when the MRS signal is switched off with either of STF and STR on.
*2. Switching the MRS signal on and rewriting the Pr. 79 value to other than " 7 " in the PU operation mode causes the MRS signal to act as the ordinary MRS function (output stop). Also as soon as "7" is set in Pr. 79, the signal acts as the PU interlock signal.

## (2) Operation mode switching by external signal

1) Preparation

Set "8" (switching to other than external operation mode) in Pr. 79. Use any of Pr. 60 to Pr. 63 (input terminal function selection) to set the terminal used for X16 signal input.

## CAUTION

When terminal assignment is changed using Pr. 60 to Pr. 63, the other functions may be affected.
Check the functions of the corresponding terminals before making settings. For details refer to page 96.
2) Function

This switching is enabled during an inverter stop only and cannot be achieved during operation.

| X16 Signal | Operation Mode |
| :---: | :---: |
| ON | External operation mode (cannot be changed to the PU operation mode) |
| OFF | PU operation mode (cannot be changed to the external operation mode) |

$P 80$ to 987 Refer to $P$ to 9 (page 64).

### 2.10.10 PID control (Pr. 88 国国 to Pr. 94 (29머)

The inverter can be used to exercise process control, e.g. flow rate, air volume or pressure.

- The voltage input signal ( 0 to +5 V or 0 to +10 V ) or Pr. 93 setting is used as a set point and the 4 to 20 mADC current input signal used as a feedback value to constitute a feedback system for PID control.

## POINT

Made valid by turning on the X14 signal. Use Pr. 60 to Pr. 63 (input terminal function selection) to make assignment.

| Parameter | Name | Factory Setting | Setting Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 88 | PID action selection | 20 | 20, 21 | Setting is enabled when Pr. $30=$ "1" |
| 89 | PID proportional band | 100\% | 0.1 to $999 \%$, --- |  |
| 90 | PID integral time | 1 s | 0.1 to 999s, --- |  |
| 91 | PID upper limit | --- | 0 to $100 \%,-$ - |  |
| 92 | PID lower limit | --- | 0 to $100 \%,-$ - |  |
| 93 | PID action set point for PU operation | 0\% | 0 to 100\% |  |
| 94 | PID differential time | --- | 0.01 to 10s, - - - |  |

## <Setting>

(1) Basic PID control configuration

Kp: Proportion constant Ti: Integral time S: Operator Td: Differential time
(2) PID action overview

1) Pl action

A combination of proportional control action (P) and integral control action (I) for providing a manipulated variable in response to deviation and changes with time.

## REMARKS

Pl action is the sum of P and I actions.
[Operation example for stepped changes of measured value]

2) PD action

A combination of proportional control action $(P)$ and differential control action (D) for providing a manipulated variable in response to deviation speed to improve the transient characteristic.

## REMARKS

$P D$ action is the sum of $P$ and $D$ actions.
3) PID action

The PI action and PD action are combined to utilize the advantages of both actions for control.

## REMARKS

The PID action is the sum of $\mathrm{P}, \mathrm{I}$ and D actions.

4) Reverse action

Increases the manipulated variable (output frequency) if deviation $\mathrm{X}=$ (set point measured value) is positive, and decreases the manipulated variable if deviation is negative.

$$
\begin{aligned}
& \text { Cold } \rightarrow \text { up } \\
& \text { Hot } \rightarrow \text { down }
\end{aligned}
$$

[Operation example for proportional changes of measured value]

Feedback signal
(Measured value)

5) Forward action Increases the manipulated variable (output frequency) if deviation $\mathrm{X}=$ (set point measured value) is negative, and decreases the manipulated variable if deviation is positive.

Feedback signal
(Measured value)

Too cold $\rightarrow$ down
Hot $\rightarrow$ up

Relationships between deviation and manipulated variable (output frequency)

|  | Deviation |  |
| :---: | :---: | :---: |
|  | Positive | Negative |
| Reverse action | $\boldsymbol{\pi}$ | $\boldsymbol{\searrow}$ |
| Forward action | $\boldsymbol{y}$ | $\boldsymbol{\pi}$ |

(3) Wiring example
-Pr. $60=14$
-Pr. $64=15$
-Pr. $65=16$
-Pr. $88=20$

*1.The power supply must be selected in accordance with the power specifications of the detector used.
*2.The output signal terminals used depends on the Pr. 64, Pr. 65 settings.
*3.The input signal terminal used depends on the setting of Pr. 60 to Pr. 63.
-The contact input signal (AU Signal) need not be turned on.

## (4) I/O signals

| Signal |  | Terminal Used | Function | Description |
| :---: | :---: | :---: | :--- | :--- |
| Input | X14 | Depending on <br> Pr. 60 to Pr. 63 | PID control <br> selection | Turn on X14 to exercise PID control. |

- Enter the set point across inverter terminals 2-5 or in Pr. 93 and enter the measured value signal across inverter terminals 4-5.
- To exercise PID control, turn on the X14 signal. When this signal is off, PID control is not exercised.

| Item | Entry | Description |  |
| :---: | :---: | :--- | :--- |
| Set point | Across <br> terminals 2-5 | Set 0 V as $0 \%$ and 5 V as $100 \%$. | When "0" is set in Pr. 73 (5V <br> selected for terminal 2). |
|  | Set 0 V as $0 \%$ and 10 V as 100\%. | When "1" is set in Pr. 73 (10V <br> selected for terminal 2). |  |
|  | Across <br> terminals 4-5 | Set the set point (\%) in Pr. 93. |  |

## (5) Parameter setting

| Parameter Number | Name | Setting | Description |
| :---: | :---: | :---: | :---: |
| 88 | PID action selection | 20 | For heating, pressure control, etc. ${ }^{\text {PID }}$ reverse action |
|  |  | 21 | For cooling, etc. $\quad$ PID forward action |
| 89 | PID proportional band | 0.1 to 999\% | If the proportional band is narrow (parameter setting is small), the manipulated variable varies greatly with a slight change of the measured value. Hence, as the proportional band narrows, the response sensitivity (gain) improves but the stability deteriorates, e.g. hunting occurs. <br> Gain $K=1 /$ proportional band |
|  |  | --- | No proportional control |
| 90 | PID integral time | 0.1 to 999s | Time required for the integral (I) action to provide the same manipulated variable as that for the proportional ( P ) action. As the integral time decreases, the set point is reached earlier but hunting occurs more easily. |
|  |  | --- | No integral control. |

| Parameter <br> Number | Name | Setting | Description |
| :---: | :---: | :---: | :---: |
| 91 | PID upper limit | 0 to 100\% | Set the upper limit. If the feedback value exceeds the setting, the FUP signal is output. (Measured value of 4 mA is equivalent to $0 \%$ and 20 mA to $100 \%$.) |
|  |  |  | No function |
| 92 | PID lower limit | 0 to 100\% | Set the lower limit. (If the measured value falls below the setting, the FDN signal is output. In this case, the measured value of 4 mA is equivalent to $0 \%$ and 20 mA to $100 \%$.) |
|  |  | --- | No function |
| 93 | PID action set point for PU operation | 0 to 100\% | Valid only when Pr. 79 = "3" (n9 = 0 for computer link operation) under the PU command in the PU operation or PU/external combined mode. (When the computer has the speed command source in the computer link operation mode (NET)) <br> For external operation, the voltage across $2-5$ is the set point. <br> (C3 value is equivalent to 0\% and C4 value to 100\%.) |
| 94 | PID <br> differential time | 0.01 to 10s | Time required for the differential (D) action to provide the same measured value as that for the proportional (P) action. As the differential time increases, greater response is made to a deviation change. |
|  |  | -- | No differential control. |

## (6) Adjustment procedure

## (7) Calibration example

(A detector of 4 mA at $0^{\circ} \mathrm{C}$ and 20 mA at $50^{\circ} \mathrm{C}$ is used to adjust the room temperature to $25^{\circ} \mathrm{C}$ under PID control. The set point is given to across inverter terminals $2-5(0-5 \mathrm{~V})$.)

## Operation

Set the proportional band and integral time to slightly higher values and the differential time to "-- -" (No control), and switch on the start signal.

Detector specifications
When the detector used has the specifications that $0^{\circ} \mathrm{C}$ is equivalent to 4 mA and $50^{\circ} \mathrm{C}$ to 20 mA , the set point of $25^{\circ} \mathrm{C}$ is $50 \%$ because 4 mA is equivalent to $0 \%$ and 20 mA to $100 \%$.
When the set point setting input ( 0 to 5 V ) and detector output ( 4 to 20 mA ) must be calibrated, make the following calibration*.
Set point = 50\%
Since the specifications of terminal 2 are such that $0 \%$ is equivalent to 0 V and $100 \%$ to 5 V , enter 2.5 V into terminal 2.
For PU operation, set the set point (0 to 100\%) in Pr. 93.
Set the room temperature to $25^{\circ} \mathrm{C}$
Set "20" or "21" in Pr. 88 and turn on the X14 signal to enable PID control.

During operation, set the proportional band and integral time to slightly higher values and set the differential time to "- - -" (No control). In accordance with the system operation, reduce the proportional band and integral time. For slow response system where a deadband exists, differential control

*When calibration $\rightarrow$ Use Pr. 38 and calibration parameters C2 to C4 (terminal 2) is required and Pr. 39 and calibration parameters C5 to C7 (terminal 4) to calibrate the detector output and set point setting input. Make calibration in the PU mode when the inverter is at a stop.

## <Set point input calibration>

1. Apply the input voltage of $0 \%$ set point setting (e.g. 0 V ) across terminals 2-5.
2. Make calibration using the calibration parameters C2, C3. At this time, enter in C2 the frequency which should be output by the inverter at the deviation of $0 \%$ (e.g. 0 Hz ). (When using the FR-PU04, make calibration with Pr. 902.)
3. Apply the voltage of $100 \%$ set point (e.g. 5 V ) to across terminals 2-5.
4. Make calibration using Pr. 38 and calibration parameter C4. At this time, enter in Pr. 38 the frequency which should be output by the inverter at the deviation of $100 \%$ (e.g. 50Hz). (When using the FR-PU04, make calibration with Pr. 903.)

## <Detector output calibration>

1. Apply the output current of $0 \%$ detector setting (e.g. 4 mA ) across terminals 4-5.
2. Make calibration using the calibration parameter C6. (When using the FR-PU04, make calibration with Pr. 904.)
3. Apply the output current of $100 \%$ detector setting (e.g. 20mA) across terminals 4-5.
4. Make calibration using the calibration parameter C7. (When using the FR-PU04, make calibration with Pr. 905.)
Note: The frequencies set in the calibration parameter C5 and Pr. 39 should be equal to those set in the calibration parameter C 2 and Pr . 38, respectively.

The results of the above calibration are as shown below:

## REMARKS

- If the multi-speed (RH, RM, RL signal) or jog operation (JOG signal) is entered, PID control is stopped and multi-speed or jog operation is started.
-When the terminal functions are changed using Pr. 60 to Pr. 65, the other functions may be affected. Confirm the functions of the corresponding terminals before making settings.
-When PID control is selected, the minimum frequency is the frequency set in the calibration parameter C 2 and the maximum frequency is the frequency set in Pr. 38.
(The Pr. 1 "maximum frequency" and Pr. 2 "minimum frequency" settings are also valid.)

## -Related parameters ${ }^{\star}$

- X14 signal assignment $\Rightarrow$ Pr. 60 to Pr. 63 (input terminal function selection) (refer to page 96)
- FUP, FDN and RL signal assignment $\Rightarrow$ Pr. 64 "RUN terminal function selection", Pr. 65 "A, B, C terminal function selection" (refer to page 98)
- Voltage input selection ( 0 to $\pm 5 \mathrm{~V}, 0$ to $\pm 10 \mathrm{~V}$ ) $\Rightarrow$ Pr. 73 " $0-5 \mathrm{~V} / 0-10 \mathrm{~V}$ selection" (refer to page 102)
- Operation mode selection $\Rightarrow \operatorname{Pr} .79$ "operation mode selection" (refer to page 107)

### 2.11 Auxiliary parameters

### 2.11.1 Slip compensation (Pr. 95 P98, Pr. 96 P98, Pr. 97 (PG7r )

|
The inverter output current may be used to assume motor slip to keep the motor speed constant.

| Parameter | Name | Factory <br> Setting | Setting Range | Remarks |
| :---: | :--- | :---: | :---: | :---: |
| 95 | Rated motor slip | --- | 0 to $50 \%,---$ |  |
| 96 | Slip compensation time <br> constant | 0.5 s | 0.01 to 10 s | Setting is enabled <br> when Pr. $30=" 1 "$ |
| 97 | Constant-output region slip <br> compensation selection | --- | $0,---$ |  |

## <Setting>

Rated slip $=\frac{\text { Synchronous speed at base frequency }- \text { rated speed }}{\text { Synchronous speed at base frequency }} \times 100[\%]$

| Parameter | Setting | Function |
| :---: | :---: | :---: |
| 95 | 0.01 to 50\% | Used to set the rated motor slip. |
|  | 0, -- | Slip compensation is not made. |
| 96 | 0.01 to 10s | Used to set the slip compensation response time. (*) |
| 97 | 0 | Slip compensation is not made in the constant output range (frequency range above the frequency set in Pr. 3). |
|  |  | Slip compensation is made in the constant output range. |

*When this value is made smaller, response will be faster.
However, as load inertia is greater, a regenerative overvoltage (OVT) error is more liable to occur.

## REMARKS

When making slip compensation at 50 Hz , set the maximum frequency ( Pr .1 ) to slightly higher than 50 Hz .
In the factory setting status, it is clamped at 50 Hz .

### 2.11.2 Automatic torque boost selection (Pr. 98 国国)

You can choose automatic torque boost control.

- Automatic torque boost control

Not only gives the motor the optimum excitation but also provides high torque even in a low speed range.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 98 | Automatic torque boost <br> selection (motor capacity) | -- | 0.1 to 3.7 kW, | Setting is enabled when <br> Pr. $30=" 1 "$ |

## <Operating conditions>

-The number of motor poles should be any of 2, 4 and 6 poles.

- Single-motor operation (One motor for one inverter)
-The wiring length from inverter to motor should be within 30 m .

## <Setting>

| Parameter | Setting | Description |
| :---: | :---: | :--- |
| 98 | --- | Ordinary V/F control and torque boost (Pr. 0, Pr. 46) are valid. |
|  | 0.1 to 3.7 kW | Automatic torque boost control valid <br> (Set the applied motor capacity or one rank lower motor capacity.) |

- Also when the Pr. 98 setting is other than "- - -", Pr. 3 "base frequency" and Pr. 19 "base frequency voltage" are valid.
- When "- --" or " 888 " is set in Pr. 19, the rated output voltage is selected.

## CAUTION

## During operation using automatic torque boost, write to Pr. 3 and $\operatorname{Pr} 19$ is disabled even if "2" is set in Pr. 77.

## - Related parameters

- Torque boost $\Rightarrow$ Pr. 0 "torque boost", Pr. 46 "second torque boost" (refer to page 61)
- Base frequency $\Rightarrow$ Pr. 3 "base frequency", Pr. 19 "base frequency voltage" (refer to page 63)
- Applied motor setting $\Rightarrow$ Pr. 71 "applied motor" (refer to page 67)
- Motor primary resistance $\Rightarrow$ Pr. 99 "motor primary resistance" (refer to page 120)

### 2.11.3 Motor primary resistance (Pr. 99 Pg9)

Generally this parameter need not be set. At the factory setting of "---", the standard motor constant of the motor capacity set in Pr. 98 (including that of the constant-torque motor) is used.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :--- | :---: | :---: | :---: |
| 99 | Motor primary <br> resistance | -- | 0to $50 \Omega$, <br> --- | Setting is enabled when Pr. $30={ }^{\prime \prime} 1 "$ |

## - Related parameters

- Applied motor setting $\Rightarrow$ Pr. 71 "applied motor" (refer to page 67)
- Automatic torque boost selection $\Rightarrow$ Pr. 98 "automatic torque boost selection" (refer to page 119)

### 2.12 Maintenance parameters

### 2.12.1 Maintenance output function (H1 H d, H2 He)

The maintenance timer alarm signal (Y95) is output when the cumulative energization time ( H 1 "maintenance timer") of the inverter reaches the time set in H2 "maintenance alarm output set time". (Used to alert the operator of the main circuit smoothing capacitor life expiration, for example.)

| Parameter | Name | Factory Setting | Setting Range | Remarks |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| H1 (503) | Maintenance timer | 0 | 0 to 999 | Write disabled | Setting can be |
| H2 (504) | Maintenance alarm output set time | $\begin{array}{\|c\|} \hline 36 \\ (36000 \mathrm{~h}) \\ \hline \end{array}$ | 0 to 999, | $\begin{aligned} & \text { - -: Function as } \\ & 36000 \mathrm{~h} \\ & \hline \end{aligned}$ | made when Pr. $30=" 1 "$ |

The parameter numbers in parentheses are those for use with the parameter unit (FRPU04).
<Setting>

1) H1 (Pr. 503) "maintenance timer"
-The cumulative energization time of the inverter is stored into the $E^{2}$ PROM every hour and indicated in 1000h increments. (Cannot be written.)
-The maintenance timer is clamped at 999 ( 999000 h ).
2) H2 (Pr. 504) "maintenance alarm output set time"
-Set the time when the maintenance timer alarm signal (Y95) is output.
-The setting unit is 1000 h .

## REMARKS

The factory setting (36000h) is the guideline for the main circuit smoothing capacitor life (about 10 years in the operating environment of $40^{\circ} \mathrm{C}$ ambient temperature, $10 \mathrm{~h} / \mathrm{day}$, and 365 days/year) of the inverter. The lifetime changes depending on the operating environment of the inverter.
3) Maintenance timer alarm signal (Y95)
-Made valid by setting "95" (maintenance timer alarm output signal) in Pr. 64 or Pr. 65 (output terminal function selection).
-If the value set in H 2 is equal to or greater than the H 1 setting, the maintenance timer alarm output (Y95) turns off.

## $\bullet$ Related parameters •

- Assignment of Y95 signal to terminal $\Rightarrow$ Pr. 64 "RUN terminal function selection", Pr. 65 "A, B, C terminal function selection" (Refer to page 98)

### 2.12.2 Current average value monitor signal

## 

The average value of the output current during constant speed operation and the maintenance timer value (maintenance parameter H 1 ) are output as pulses to the current average value monitor signal (Y93).
The pulse width measured by inputting the signal to the I/O module of the PLC or the like can be used as a guideline for increase in output current due to abrasion of peripheral machines and elongation of belt and for aged deterioration of peripheral devices to know the maintenance time.
The current average value monitor signal (Y93) is output as pulse for 20s as 1 cycle and repeatedly output during constant speed operation.

| Parameter | Name | Factory Setting | Setting Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| H3 (555) | Current average time | 1s | 0.1 to 1s | Setting is enabled when Pr. $30=11 "$ |
| H4 (556) | Data output mask time | 0s | 0 to 20s |  |
| H5 (557) | Current average value monitor signal output reference current | 1A | 0.1 to 999A |  |

The parameter number in parentheses is the one for use with the parameter unit (FR-PU04).

## <Pulse operation>

The output pulse of the Y93 signal is shown below.

3) Output current average value pulse

The averaged current value is output as
low pulse shape for 0.5 to 9 ( 10 to 180\%)
during start bit output.
$\begin{aligned} & \text { Signal } \\ & \text { output time }\end{aligned}=\frac{\text { Output current average value (A) }}{\text { Parameter } \mathrm{H} 5(\mathrm{~A})} \times 5 \mathrm{~s}$

## <Setting>

Perform setting according to the following steps.

1) Setting of maintenance parameter H 4 "data output mask time"

The output current is unstable (transient state) right after the operation is changed from the acceleration/deceleration state to the constant speed operation. Set the time for not obtaining (mask) transient state data in H4.
2) Setting of maintenance parameter H 3 "output current average time"

The average output current is calculated during Hi output of start bit (1s). Set the time taken to average the current during start bit output in H 3 .
3) Setting of maintenance parameter H5 "output reference current"

Set the reference $(100 \%)$ for outputting the signal of the current average value. Obtain the time to output the signal from the following calculation.

Output current average value
Setting value of output reference current (H5) $\times 5$ s (Output current average value $100 \% / 5 \mathrm{~s}$ )
Note that the output time range is 0.5 s to 9 s , and it is 0.5 s when the output current average value is less than $10 \%$ of the setting value of output reference current (H5) and 9s when exceeds $180 \%$. Example) when $\mathrm{H} 5=10 \mathrm{~A}$ and the average value of output current is 15 A
As $15 \mathrm{~A} / 10 \mathrm{~A} \times 5 \mathrm{~s}=7.5$, the current average value monitor signal is output as low pulse shape for 7.5 s .

4) Output of maintenance timer value (maintenance parameter H 1 ) After the output current average value is output as low pulse shape, the maintenance timer value is output as high pulse shape. The output time of the maintenance timer value is obtained from the following calculation.
Maintenance timer value (H1)

## 40000h

x 5 s (Maintenance timer value $100 \% / 5 s$ s)
Note that the output time range is 2 to 9 s , and it is 2 s when the maintenance timer value (H1) is less than 16000h and 9s when exceeds 72000h.

## REMARKS

- Mask of data output and sampling of output current are not performed during acceleration/ deceleration.
- Set "93" in Pr. 64 and assign the current average value monitor signal (Y93) to the RUN terminal. It can not be assigned to the ABC contact (Pr.65)
-When the speed is changed to acceleration/deceleration from constant speed during start bit output, the data is judged as invalid, the start bit is output as high pulse shape for 3.5 s , and the end signal is output as low pulse shape for 16.5 s .

The signal is output for at least 1 cycle even when acceleration/deceleration state continues after the start bit output is completed.
-When the output current value (inverter output current monitor) is 0 A on completion of the 1 cycle signal output, the signal is not output until the speed becomes constant next time.
-The current average value monitor signal (Y93) is output as low pulse shape for 20s (without data output) under the following condition.
(1) when the motor is in the acceleration/deceleration state on completion of the 1 cycle signal output
(2) when the 1 cycle output is completed during restart operation with automatic restart after instantaneous power failure (Pr. $57 \neq$ "---")
(3) when automatic restart operation was being performed with automatic restart after instantaneous power failure selected (Pr. $57 \neq$ "---") on completion of the data output mask

## - Related parameters *

- Assignment of Y93 signal to terminal $\Rightarrow$ Pr. 64 "RUN terminal function selection" (Refer to page 98.)
- Maintenance timer value $\Rightarrow$ maintenance parameter H1 "maintenance timer (Refer to page 120.)

Automatic restart after instantaneous power failure operation $\Rightarrow$ Pr. 57 "restart coasting time" (Refer to page 90.)

Refer to 9 (page 67).

### 2.13 Calibration parameters

### 2.13.1 Meter (frequency meter) calibration (C1 [i)

The AM terminal is factory-set to provide 5VDC output in the full-scale status of each monitor item. However, calibration parameter C 1 can be used to adjust the output voltage ratio (gain) according to the meter scale. Note that the maximum output voltage is 5VDC.

| Parameter | Name | Factory Setting | Setting Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| C1 (901) | AM terminal <br> calibration | - | - | Setting is enabled when <br> Pr. 30 = "1" |

The parameter number in parentheses is the one for use with the parameter unit (FRPU04).

Changing example
Deflecting the meter (analog indicator) to full-scale (5V) at the preset frequency of 50 Hz (for frequency setting, refer to the instruction manual (basic).)
POINT
-The calibration parameters "C1" can be made to be ready by setting "1" (extended function parameter valid) in Pr. 30 "extended function display selection".
-Set the value of the calibration parameter C1 "AM terminal calibration".

## Operation

1. Press the noos to choose the parameter setting mode.
2. Turn the $\bigcirc$ to show

- Pr. 30 must be set to "1".
(For details, refer to the instruction manual (basic).)

3. Press the (SET) to show " - "
4. Turn the $\bigcirc$ until the calibration parameter C1 "AM terminal calibration" appears.
5. Press the (SET to enable setting.
6. If the inverter is at a stop, press the RuN) to start it. (The motor need not be connected.)
7. Turn the $\bigcirc$ to adjust the indicator needle to the desired position.
8. Press the serf.

Setting is complete.

Flicker ... Parameter setting complete!!

- By turning the $\bigcirc$, you can read another parameter.
- Press the (ser) to return to the ${ }_{-}^{-}$-indication (step 3).
- Press the ser) twice to show the next parameter (íl r)

## REMARKS

-Depending on the set value, it may take some time for the needle to move.

- If "1" is set in Pr. 30 "extended function display selection", the calibration parameter C1 "AM terminal calibration" can also be set in the external operation mode.
-When the FR-PU04 is used, make calibration with Pr. 901.

POINT
By setting the Pr. 54 "AM terminal function selection" value, preset Pr. 55 "frequency monitoring reference" or Pr. 56 "current monitoring reference" to the running frequency or current value at which the output signal is 5 V .
At 5 V , the meter generally deflects to full-scale.

- Related parameters ${ }^{*}$

Choosing signal to be output to AM terminal $\Rightarrow$ Pr. 54 "AM terminal function selection" (refer to page 88)
Reference values of frequency and current values $\Rightarrow$ Pr. 55 "frequency monitoring reference", Pr. 56 "current monitoring reference" (refer to page 90)
[ 3 to $9 \Rightarrow$ Refer to 930 , 93 (page 80).

### 2.14 Clear parameters

### 2.14.1 Parameter clear (CLr ELir)

Initializes the parameter values to the factory settings.
Clear the parameters during a stop in the PU operation mode.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |  |
| :---: | :--- | :---: | :---: | :--- | :--- |
| CLr |  |  | 0: Clear is not executed. <br> 1: Parameter clear *1 <br> (Calibration parameters C1 to | Setting is <br> enabled <br> when Pr. 30 |  |
| Parameter |  |  |  |  |  |
| clear |  |  |  |  |  |

*1.Parameters are not cleared by setting "1" in Pr. 77 "parameter write disable selection".
Pr. 75, Pr. 38, Pr. 39, Pr. 53, Pr. 60 to Pr. 65, Pr. 99, maintenance parameters $\mathrm{H} 1, \mathrm{H} 2$, calibration parameters C 1 to C 7 and communication parameters n13, n15 are not cleared.
*2.Pr. 75, maintenance parameter H 1 and communication parameter n13 are not cleared.

## REMARKS

For details of the operation procedure, refer to the instruction manual (basic).

### 2.14.2 Alarm history clear (ECL EEA)

- Clear the alarm history.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |  |
| :---: | :--- | :---: | :---: | :---: | :---: |
| ECL | Alarm history <br> clear | 0 | 0,1 | $0:$ Not cleared <br> $1:$ Alarm history clear | Setting is enabled <br> when Pr. $30=" 1 "$ |

### 2.15 Communication parameters

You can perform communication operation from the RS-485 connector of the inverter through RS-485.

## (1) Operational functions

1) Operation mode switching
[Operation mode switching method]

| Symbol | Switching Type | Switching Method |  |  |
| :---: | :---: | :---: | :---: | :---: |
| (A) | PU operation to external operation | Using the (PUT$\square$ of the operation panel or the $\square$ PU $\square$ of the parameter unit (FR-PU04) |  |  |
| (B) | External operation to PU operation | Using the (PU$\square$ of the operation panel or the $\square$ PU EXT of the parameter unit (FR-PU04) |  |  |
| (C) | External operation to computer link operation | Using the computer program | ) | H0000: Communication operation |
| (D) | Computer link operation to external operation | Using the computer program | Write (HFB) | H0001: External operation |
| (E) | PU operation to computer link operation | Switching must not be made (External operation may be selected at (A) and then switched to computer link operation at (C)*) |  |  |
| (F) | Computer link operation to PU operation | Switching must not be made <br> (External operation may be selected at (D) and then switched to PU operation at (B)*) |  |  |

* When "1" is set in the communication parameter n10 "link startup mode selection", the inverter is placed in the computer link operation mode at power on or inverter reset. (Note that it is overridden by the Pr. 79 "operation mode selection" setting.)

## REMARKS

Unlike the other inverters, the FR-S500 series is not the type of inverter whose operation panel is removed to make communication.
Parameter setting using setup S/W is not enabled in the PU operation mode and external / PU combined operation mode (Pr. $79=1,3,4$ ). Also, pressing the RUN on the operation panel starts the inverter in the external / PU combined operation mode. (Pr. 79=1, 3)
2) Operation mode-based functions

| Operation Location | Item | Operation Mode |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | PU operation | External operation | Computer link operation |
| Operation panel or FR-PU04 | Run command (start) | Enabled | Enabled (Combined operation mode) | Disabled |
|  | Running frequency setting | Enabled | Enabled (Combined operation mode) | Disabled |
|  | Monitoring | Enabled | Enabled | Enabled |
|  | Parameter write | Enabled (*4) | Disabled | Disabled |
|  | Parameter read | Enabled | Enabled | Enabled |
|  | Inverter reset | Enabled | Enabled | Enabled |
|  | Stop command | Enabled | Enabled (*3) | Enabled (*3) |
| On-computeruser program byRS-485communication | Run command | Disabled | Disabled | Enabled (*1) |
|  | Running frequency setting (*) | Disabled | Disabled | Enabled (*1) |
|  | Monitoring | Enabled | Enabled | Enabled |
|  | Parameter write | Disabled | Disabled | Enabled (*4) |
|  | Parameter read | Enabled | Enabled | Enabled |
|  | Inverter reset | Disabled | Disabled | Enabled (*2) |
|  | Stop command | Disabled | Disabled | Enabled |
| Control circuit external termina | Inverter reset | Enabled | Enabled | Enabled |
|  | Run command | Enabled (Combined operation mode) | Enabled | Enabled (*1) |
|  | Frequency setting | Enabled (Combined operation mode) | Enabled | Enabled (*1) |

*1. As set in the communication parameters n8 "operation command source" and n9 "speed command source". (refer to page 145)
*2. At occurrence of RS-485 communication error, the inverter cannot be reset from the computer.
*3. As set in Pr. 75 "reset selection/PU stop selection".
*4. As set in Pr. 77 "parameter write disable selection".

## CAUTION

* When the user program of the computer is used to make the running frequency setting by RS-485 communication, setting can be made in the minimum setting increments of 0.01 Hz , but the setting may be written to the inverter in increments of 0.1 Hz . ( 0 is written in the second decimal place.)

## POINT

To perform parameter write, give an operation command, make inverter reset, etc. using RS-485 communication, the operation mode must be changed to the "computer link operation mode".
Set "0", "2", "7" or "8" in Pr. 79 "operation mode selection" to select the external operation mode, and change the operation mode to the "computer link operation mode" in either of the following methods.

1) Set "1" in the communication parameter n10 "link startup mode selection" to start the inverter in the "computer link operation mode" at power on. (Refer to page 146 for the communication parameter n10.)
2) Using operation mode write (instruction code HFB), write HOOOO to choose the "computer link operation mode". (Refer to page 139 for operation mode write.)

### 2.15.1 Communication settings (n1 niton7n7, n11 mit)

## - Communication-related parameters

| Parameter | Name | Factory Setting | Setting Range | Remarks | Reflection <br> Timing |
| :---: | :---: | :---: | :---: | :---: | :---: |
| n1(331) | Communication station number | 0 | 0 to 31 | Setting is enabled when Pr. $30=11 "$ | After reset |
| n2(332) | Communication speed | 192 | 48,96,192 |  | After reset |
| n3(333) | Stop bit length | 1 | 0,1,10,11 |  | After reset |
| n4(334) | Parity check presence/ absence | 2 | 0,1,2 |  | After reset |
| n5(335) | Number of communication retries | 1 | 0 to 10, |  | Immediately |
| n6(336) | Communication check time interval (*) | --- | $\begin{gathered} \text { 0, } 0.1 \text { to } \\ 999 \mathrm{~s},--- \end{gathered}$ |  | Immediately |
| n7(337) | Waiting time setting | --- | $\begin{gathered} 0 \mathrm{to} \\ 150 \mathrm{~ms}, \end{gathered}$ |  | After reset |
| n11(341) | CR/LF selection | 1 | 0,1,2 |  | After reset |

- The parameter numbers within parentheses are those for use of the parameter unit (FR-PU04).
- Refer to page 176 for the instruction codes.

## POINTS

*When making RS-485 communication, set any value other than 0 in the communication parameter n6 "communication check time interval". RS-485 communication is disabled if the setting is "0s".

- Communication specifications

| Item |  |  | Computer |
| :---: | :---: | :---: | :---: |
| Conforming standard |  |  | EIA-485 (RS-485) |
| Number of inverters connected |  |  | $1: \mathrm{N}$ (max. 32 inverters) |
| Communication speed |  |  | Selected between 19200, 9600 and 4800bps |
| Control protocol |  |  | Asynchronous |
| Communication method |  |  | Half-duplex |
|  | Character system <br> Stop bit length |  | ASCII (7 bits/8 bits) selectable |
|  |  |  | Selectable between 1 bit and 2 bits. |
|  | Terminator |  | CR/LF (presence/absence selectable) |
|  | Check system | Parity check | Selectable between presence (even/odd) and absence |
|  |  | Sum check | Presence |
| Waiting time setting |  |  | Selectable between presence and absence |

## REMARKS

-For computer link operation, set 65535 (HFFFF) as the value "- - -"and 65520 (HFFFO) as the Pr. 19 value " 888 ".

- Refer to page 39 for handling the RS-485 connector.
-For parameter instruction codes, refer to the appended parameter instruction code list (page 176).

## <Setting>

To make communication between the personal computer and inverter, initialization of the communication specifications must be made to the inverter. If initial setting is not made or there is a setting fault, data transfer cannot be made.
*After making the initial setting of the parameters, always reset the inverter. After you have changed the communication-related parameters, communication cannot be made until the inverter is reset.

| Parameter | Description | Setting | Description |
| :---: | :---: | :---: | :---: |
| n1 | Communication station number | 0 to 31 | Station number specified for communication from the RS-485 connector. <br> Set the inverter station numbers when two or more inverters are connected to one personal computer. |
| n2 | Communication speed | 48 | 4800bps |
|  |  | 96 | 9600bps |
|  |  | 192 | 19200bps |
| n3 | Stop bit length/ data length | 8 bits 0 | Stop bit length 1 bit |
|  |  | 8 bits ${ }^{1}$ | Stop bit length 2 bits |
|  |  | 7 bits 10 | Stop bit length 1 bit |
|  |  | 7 bits 11 | Stop bit length 2 bits |
| n4 | Parity check presence/ absence | 0 | Absent |
|  |  | 1 | Odd parity present |
|  |  | 2 | Even parity present |
| n5 | Number of communication retries | 0 to 10 | Set the permissible number of retries at occurrence of a data receive error. <br> If the number of consecutive errors exceeds the permissible value, the inverter will come to an alarm stop (OPT). |
|  |  | (65535) | If a communication error occurs, the inverter will not come to an alarm stop. At this time, the inverter can be coasted to a stop by MRS or RES input. During a communication error ( H 0 to H 5 ), the minor fault signal (LF) is switched on. Allocate the used terminal with any of Pr. 64, Pr. 65 (output terminal function selection). |
| n6 | Communication check time interval | 0 | No communication |
|  |  | 0.1 to 999 | Set the communication check time [s] interval. If a no-communication state persists for longer than the permissible time, the inverter will come to an alarm stop (OPT). |
|  |  | --- | Communication check suspension. |
| n7 | Waiting time setting | 0 to 150 | Set the waiting time between data transmission to the inverter and response. |
|  |  | --- | Set with communication data. |
| n11 | CR/LF selection | 0 | Without CR/LF |
|  |  | 1 | With CR, without LF |
|  |  | 2 | With CR/LF |

## <Computer programming>

## (1) Communication protocol

Data communication between the computer and inverter is performed using the following procedure:

## REMARKS

*1. If a data error is detected and a retry must be made, execute retry operation with the user program. The inverter comes to an alarm stop if the number of consecutive retries exceeds the parameter setting.
*2. On receipt of a data error occurrence, the inverter returns "reply data 3)" to the computer again. The inverter comes to an alarm stop if the number of consecutive data errors reaches or exceeds the parameter setting.
(2) Communication operation presence/absence and data format types

Communication operation presence/absence and data format types are as follows:

| No. | Operation |  | Run Command | Running Frequency | $\begin{gathered} \text { Parameter } \\ \text { Write } \end{gathered}$ | Inverter Reset | Monitoring | Parameter Read |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1) | Communication request is sent to the inverter in accordance with the user program in the computer. |  | $A^{\prime}$ | A (A")*1 | A (A")*2 | A | B | B |
| 2) | Inverter data processing time |  | Present | Present | Present | Absent | Present | Present |
| 3) | Reply data from the inverter.(Da ta 1) is checked for error) | No error* (Request accepted) | C | C | C | Absent | $\frac{\mathrm{E}, \mathrm{E}^{\prime}}{\left(\mathrm{E}^{\prime \prime}\right)^{\star} 1}$ | $\underset{\left(E^{\prime \prime}\right)^{\star} 2}{E}$ |
|  |  | With error (request rejected) | D | D | D | Absent | F | F |
| 4) | Computer processing delay time |  | Absent | Absent | Absent | Absent | Absent | Absent |
|  | Answer from computer in response to reply data 3). (Data 3) is checked for error) | No error* (No inverter processing) | Absent | Absent | Absent | Absent | G <br> (Absent) | G <br> (Absent) |
| 5) |  | With error. (Inverter outputs 3) again.) | Absent | Absent | Absent | Absent | H | H |

* In the communication request data from the computer to the inverter, 10 ms or more is also required after "no data error (ACK)". (Refer to page 135.)

## REMARKS

*1. Setting any of "0.1" to "999" in Pr. 37 "speed display" and "1" in instruction code "HFF" sets the data format to A" or E" (6-digit data). Also, the output frequency turns to a speed display, which is valid in $0.01 \mathrm{r} / \mathrm{min}$ increments. (The third decimal place is invalid.) If the instruction code "HFF" is other than "1", the display is in $1 \mathrm{r} / \mathrm{min}$ increments and a 4 -digit data format can be used. Reply data is given in format $E$ if the requested monitor data has 4 digits, in format $E$ ' if the data has 2 digits, or in format $E "$ if the data has 6 digits.
*2. The data format to read/write Pr. 37 "speed display" is always E"/A" (6-digit data).

## (3) Data format

Data used is hexadecimal.
Data is automatically transferred in ASCII between the computer and inverter.
Data format types

1) Communication request data from computer to inverter

[Data read]

| ENQ ${ }^{*} 1$ | $\begin{aligned} & \text { *2 } \\ & \text { Inverter } \\ & \text { station } \\ & \text { number } \end{aligned}$ | $\begin{gathered} \text { Instruction } \\ \text { code } \end{gathered}$ | $\begin{gathered} { }^{*} 3 \\ \text { Waiting } \\ \text { time } \end{gathered}$ | Sum check | * 4 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 23 | 45 | 6 | 78 | 9 |  |

2) Reply data from inverter to computer during data write
[No data error detected]
Format C
 characters
[Data error detected]

3) Reply data from inverter to computer during data read [No data error detected]
[Data error detected]

4) Send data from computer to inverter during data read
[No data error detected]
(May be omitted)

## REMARKS

*1. Indicates the control code. (Refer to the table below.)
*2. Specify the inverter station numbers between HOO and H1F (stations 0 to 31) in hexadecimal.
*3. When communication parameter n7 "waiting time setting" $\neq-$--, create the communication request data without "waiting time" in the data format.
(The number of characters is decremented by 1.)
*4. CR or LF code
When data is transmitted from the computer to the inverter, codes CR (carriage return) and LF (line feed) codes are automatically set at the end of a data group on some computers. In this case, setting must also be made on the inverter according to the computer.
Also, the presence or absence of the CR and LF codes can be selected using n 11 .

## (4) Data definitions

1) Control codes

| Signal | ASCII Code | Description |
| :---: | :---: | :--- |
| STX | H02 | Start of Text (Start of data) |
| ETX | H03 | End of Text (End of data) |
| ENQ | H05 | Enquiry (Communication request) |
| ACK | H06 | Acknowledge (No data error detected) |
| LF | H0A | Line Feed |
| CR | H0D | Carriage Return |
| NAK | H15 | Negative Acknowledge (Data error detected) |

2) Inverter station number

Specify the station number of the inverter which communicates with the computer.

## 3) Instruction code

Specify the processing request, e.g. operation or monitoring, given by the computer to the inverter. Hence, the inverter can be run and monitored in various ways by specifying the instruction code as appropriate. (Refer to page 176.)
4) Data

Indicates the data such as frequency and parameters transferred to and from the inverter. The definitions and ranges of set data are determined in accordance with the instruction codes. (Refer to page 176.)

## 5) Waiting time

Specify the waiting time between the receipt of data at the inverter from the computer and the transmission of reply data. Set the waiting time in accordance with the response time of the computer between 0 and 150 ms in 10 ms increments (e.g. $1=10 \mathrm{~ms}, 2=20 \mathrm{~ms}$ ).

## REMARKS

When communication parameter n7 "waiting time setting" $=$ "---", create the communication request data without "waiting time" in the data format. (The number of characters is decremented by 1.)

## 6) Response time

[Formula for data sending time]
$\frac{1}{\text { Communication speed }_{\text {(bps) }} \times}$
Number of data characters
(Refer to page 133)
Communication specification
(Total number of bits) (See below)
Communication specification

> = Data sending time (s)

| Name |  | Number of Bits |
| :---: | :---: | :---: |
| Stop bit length |  | $\begin{aligned} & 1 \begin{array}{l} 1 \text { bit } \\ 2 \text { bits } \end{array} \end{aligned}$ |
| Data length |  | $\begin{aligned} & 7 \text { bits } \\ & 8 \text { bits } \end{aligned}$ |
| Parity check | Yes | 1 bit |
|  | No | 0 bit |

## 7) Open cable detection (Communication parameter n6 "communication check time interval")

- If disconnection (communication stop) is detected between the inverter and computer as a result of disconnection check, a communication error (OPT) occurs and the inverter output is shut off.
- Disconnection check is made when the setting is any of " 0.1 s " to "999s". To make disconnection check, it is necessary to send data (control code refer to page 134) from the computer within the communication check time interval. (The send data has nothing to do with the station number)
- Communication check is performed in computer link operation mode from at the first communication.
- When the setting is "---", communication check (disconnection detection) is not made.
- When the setting is " 0 ", RS-485 communication is disabled.

Example: When communication parameter n6= "0.1 to 999"

## 8) Sum check code

The sum check code is 2 -digit ASCII (hexadecimal) representing the lower 1 byte ( 8 bits) of the sum (binary) derived from the checked ASCII data

## 9) Error code

If any error is found in the data received by the inverter, its definition is sent back to the computer together with the NAK code. (Refer to page 143.)

## REMARKS

1. When the data from the computer has an error, the inverter will not accept that data.
2.All data communication, e.g. run command or monitoring, are started when the computer gives a communication request. The inverter does not return any data without the computer's request. For monitoring, therefore, design the program to cause the computer to provide a data read request as required.
3.When the parameter setting is read or written, the data of the link parameter expansion setting changes depending on the parameter. For the data, refer to the parameter instruction code list on page 176.

## \. CAUTION

Always set the communication check time interval before starting operation to prevent hazardous conditions.
Data communication is not started automatically but is made only once when the computer provides a communication request. If communication is disabled during operation due to signal cable breakage etc., the inverter cannot be stopped. When the communication check time interval has elapsed, the inverter will come to an alarm stop (OPT).
The inverter can be coasted to a stop by switching on its RES signal or by switching power off.
If communication is broken due to signal cable breakage, computer fault etc., the inverter does not detect such a fault. This should be fully noted.

## <Setting items and set data>

After completion of parameter settings, set the instruction codes and data then start communication from the computer to allow various types of operation control and monitoring.

| No. | Item | Instruction Code | Description | Number of Data Digits |
| :---: | :---: | :---: | :---: | :---: |
| 3 | Run command | HFA |  | 2 digits |
| 4 | Inverter status monitor | H7A |  | 2 digits |

| No. | Item | Instruction Code | Description | $\begin{aligned} & \text { Number } \\ & \text { of Data } \\ & \text { Diaits } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| 5 | Set frequency read (RAM) | H6D | -When Pr. 37 = "0" (factory setting) <br> The set frequency (RAM or $E^{2} P R O M$ ) is read. <br> H0000 to H2EEO: 0.01 Hz increments <br> -When Pr. $37=0.1$ to 999 ", expansion link parameter <br> (HFF) $=0$ <br> The set speed is read. <br> H0000 to H03E7: 1r/min increments <br> -When Pr. 37 = "0.1 to 999 ", expansion link parameter (HFF) $=1$ <br> The set speed is read. (The number of data digits is 6 digits.) <br> H0000 to HF3E58: $0.001 \mathrm{r} / \mathrm{min}$ increments | $\begin{aligned} & 4 \text { digits } \\ & \text { (6 digits) } \end{aligned}$ |

|  | Set frequency write (RAM only) | HED | -When Pr. $37=$ " 0 " (factory setting) <br> H0000 to H2EEO ( 0 to 120.00 Hz ): Set frequency in 0.01 Hz increments <br> When changing the set frequency continuously, write it to the inverter RAM (instruction code: HED). <br> The minimum setting increments are 0.01 Hz but setting can be made in only 0.1 Hz increments. <br> -When Pr. 37 = "0.1 to 999", expansion link parameter HFF $=0$ <br> H0000 to H03E7 (0 to 999): Set speed in $1 \mathrm{r} / \mathrm{min}$ increments | $\begin{aligned} & 4 \text { digits } \\ & \text { (6 digits) } \end{aligned}$ |
|  | Set frequency write (RAM and $\mathrm{E}^{2}$ PROM) | HEE | -When Pr. $37=$ = 0.1 to 999 ", expansion link parameter HFF = 1 <br> H0000 to HF3E58 (0 to 999.000): Set speed in 0.001r/ min increments <br> Set the number of data digits as 6 digits. The minimum setting increments are $0.001 \mathrm{r} / \mathrm{min}$ but setting can be made in only $0.01 \mathrm{r} / \mathrm{min}$ increments. |  |
| 6 | Inverter reset | HFD | H9696: Resets the inverter. As the inverter is reset on start of communication by the computer, the inverter cannot send reply data back to the computer. | 4 digits |
| 7 | Alarm definition batch clear | HF4 | H9696: Alarm history batch clear | 4 digits |

## REMARKS

For the instruction codes HFF, HEC, their set values are held once they are written, but changed to 0 when the inverter is reset or all clear is performed.

## <Error Code List>

The corresponding error code in the following list is displayed if an error is detected in any communication request data from the computer:

| $\begin{array}{c}\text { Error } \\ \text { Code }\end{array}$ | Item | Definition | $\begin{array}{c}\text { Inverter } \\ \text { Operation }\end{array}$ |
| :---: | :--- | :--- | :--- |
| H0 | $\begin{array}{l}\text { Computer } \\ \text { NAK error }\end{array}$ | $\begin{array}{l}\text { The number of errors consecutively detected in } \\ \text { communication request data from the computer is } \\ \text { greater than allowed number of retries. }\end{array}$ |  |
| H1 | Parity error | The parity check result does not match the specified parity |  | Brought to an \(\left.\begin{array}{l}Brarm stop (OPT) <br>

af error occurs <br>
continuously <br>
more than the <br>
allowable number <br>
of retries.\end{array}\right\}\)

## (5) Operation at alarm occurrence

| Fault Location | Status | Operation Mode |  |
| :--- | :--- | :---: | :---: |
|  |  | Communication <br> Operation <br> RS-485 connector) | External Operation |
| Inverter fault | Inverter operation | Stop | Stop |

## 2．15．2 Operation and speed command source（n8 日 日，n9 日（

Used to make valid the operation and speed commands from the computer or external terminals．

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :--- | :---: | :---: | :---: |
| n8（338） | Operation <br> command source | 0 | 0,1 | Setting is enabled when Pr． $30=" 1 "$ |
| n9（339） | Speed <br> command source | 0 | 0,1 |  |

The parameter numbers within parentheses are those for use of the parameter unit （FR－PU04）．

## ＜Setting＞

In the computer operation mode，commands from the external terminals and computer are as listed below．
（Refer to page 96 for Pr． 60 to Pr． 63 （input terminal function selection）．）

| Operation location selection |  | n8（Pr．338）＂operation command source＂ |  | $\begin{array}{c\|} \hline 0: \\ \text { Computer } \\ \hline \end{array}$ | $\begin{array}{c\|} \hline 0: \\ \text { Computer } \end{array}$ | 1： <br> External | 1： <br> External | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | n9（Pr．339）＂speed command source＂ |  | Computer | 1： <br> External | $\begin{array}{c\|} \hline 0: \\ \text { Computer } \\ \hline \end{array}$ | 1： <br> External | Remarks |
| Fixed function （Terminal－ equivalent function） |  | Forward rotation command（STF） |  | Computer | Computer | External | External |  |

|  |  | 6 | Output stop（MRS） | Combined | Combined | External | External | Pr． $79 \neq{ }^{\prime \prime}{ }^{\prime \prime}$ |
|  |  | 7 | External thermal relay input（OH） | External | External | External | External |  |
|  |  | 8 | $\begin{aligned} & \text { 15-speed selection } \\ & \text { (REX) } \end{aligned}$ | Computer | External | Computer | External | Pr． 59 ＝＂0＂ |
|  |  | 9 | Jog operation selection （JOG） | － | － | External | External |  |
|  |  | 10 | Reset（RES） | External | External | External | External |  |
|  |  | 14 | PID control valid terminal（X14） | Computer | External | Computer | External |  |
|  |  | 16 | PU－external operation switch－over（X16） | External | External | External | External |  |
|  |  |  | Reverse rotation command（STR） | Computer | Computer | External | External |  |

| Operation location selection | n8 (Pr. 338) "operation command source" | $\begin{array}{c\|} \hline \text { 0: } \\ \text { Computer } \\ \hline \end{array}$ | $\begin{array}{\|c\|} \hline \mathbf{0 :} \\ \text { Computer } \\ \hline \end{array}$ | $\begin{gathered} \text { 1: } \\ \text { External } \end{gathered}$ | $\begin{gathered} \text { 1: } \\ \text { External } \end{gathered}$ | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | n9 (Pr. 339) "speed command source" | $\begin{gathered} \hline 0: \\ \text { Computer } \\ \hline \end{gathered}$ | 1 : <br> External | $\begin{array}{c\|} \hline 0: \\ \text { Computer } \\ \hline \end{array}$ | $\begin{gathered} \text { 1: } \\ \text { External } \end{gathered}$ |  |
| RH, RM, <br> RL, REX | $\begin{aligned} & \text { Remote setting } \\ & \text { (RH, RM, RL) } \\ & \hline \end{aligned}$ | Computer | External | Computer | External | $\begin{aligned} & \text { Pr. 59= } \\ & \text { "1", "2" } \end{aligned}$ |
| selection function | 15-speed selection (REX) | - | - | - | - |  |
| MRS selection function | PU operation interlock (MRS) | External | External | External | External | Pr. 79 = "7" |

## [Explanation of table]

External : Operation is valid only from external terminal signal.
Computer : Operation is valid only from computer.
Combined : Operation is valid from either of external terminal and computer.

- : Operation is invalid from either of external terminal and computer.

## CAUTION

When Pr. 79 "operation mode selection" is set to " 7 " (PU operation interlock function), only the external terminal is made valid independently of the n8 and n 9 settings because the MRS terminal is shared.

### 2.15.3 Link startup mode selection (n10 min)

The operation mode at power on and at power restoration after instantaneous power failure can be selected.
Set "1" in n10 to select the computer link operation mode.
After a link start, parameter write is enabled with a program.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| $\mathrm{n} 10(340)$ | Link startup <br> mode selection | 0 | 0,1 | Setting is enabled when Pr. $30=" 1 "$ |

The parameter number in parentheses is the one for use with the parameter unit (FRPU04).
<Setting>

| n10 <br> Setting | Pr. 79 <br> Setting | Operation Mode at <br> Power on or Power <br> Restoration | Remarks |
| :---: | :---: | :--- | :--- |
|  | 0 | External operation mode |  | | Can be changed to the computer link operation |
| :--- |
| mode by RS-485 communication. |

- n 10 can be changed independently of the operation mode of the operation panel.
- Setting of $n 10=" 1$ " is made valid when " 0 " or " 2 " is set in Pr. 79 "operation mode selection".

### 2.15.4 $E^{2}$ PROM write selection ( $n 12$ [ B 国)

- You can choose whether the parameters are stored into the $E^{2}$ PROM or not at the parameter setting for computer communication. When performing parameter write frequently, write them to the RAM.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :--- | :--- | :---: | :---: | :--- |
| $n 12$ (342) | $E^{2}$ PROM write <br> selection | 0 | 0,1 | 0: Written to RAM and E2PROM <br> 1 : Written to RAM only <br> Not written to E2PROM* <br> Setting is enabled when Pr. $30=" 1 "$ |

The parameter number in parentheses is the one for use with the parameter unit (FRPU04).

## REMARKS

*When the parameter setting is "not written to $\mathrm{E}^{2}$ PROM" (setting=1), the settings return to the original values (values saved in the $E^{2} P R O M$ ) at power-on reset or terminal reset.

### 2.16 Parameter unit (FR-PU04) setting

When the optional parameter unit (FR-PU04) is connected to the RS-485 connector of the inverter, you can make the environment setting of the parameter unit.

## CAUTION

When the parameter unit (FR-PU04) is used, operation from the operation panel is not accepted. (The stop key ( ( $\left.\frac{\text { STOP }}{\text { RESET }}\right)$ ) is valid)

### 2.16.1 PU display language selection ( $n$ 13 n 目)

By setting the communication parameter n13 "PU display language selection", you can switch the display language of the parameter unit to another.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| $n 13(145)$ | PU display language <br> selection |  | 0 to 7 | Setting is enabled when Pr. $30=" 1 "$ |

The parameter number in parentheses is the one for use with the parameter unit (FRPU04).

## <Setting>

| n13 Setting | Display Language |
| :---: | :---: |
| 0 | Japanese |
| 1 | English (factory setting) |
| 2 | German |
| 3 | French |
| 4 | Spanish |
| 5 | Italian |
| 6 | Swedish |
| 7 | Finish |

### 2.16.2 PU buzzer control (n14 ni

By setting the communication parameter n14 "PU buzzer control", you can control "beep" produced when any of the parameter unit (FR-PU04) keys is operated.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :--- | :---: | :---: | :---: | :--- |
| $n 14$ (990) | PU buzzer control | 1 | 0,1 | $0:$ Without sound <br> $1:$ With sound (factory setting) <br> Setting is enabled when Pr. $30=" 1 "$ |

The parameter number in parentheses is the one for use with the parameter unit (FRPU04).

### 2.16.3 PU contrast adjustment (n15 [17日)

By setting the communication parameter n15 "PU contrast adjustment", you can adjust the LCD contrast of the parameter unit (FR-PU04). When using the FRPU04, adjust the numerical value to any darkness with the
( $)$ and define that brightness with the WRITE of the parameter unit.

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| n15 (991) | PU contrast adjustment | 58 | 0 to 63 | Setting is enabled when Pr. 30 $=$ "1"" |

The parameter number in parentheses is the one for use with the parameter unit (FRPU04).

## CAUTION

When using the FR-PU04, you should press the WRITE to store the PU contrast setting value.

### 2.16.4 PU main display screen data selection (n16 n 回)

You can choose the main display screen of the parameter unit (FR-PU04).

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| n16 (992) | PU main display <br> screen data <br> selection | 0 | 0,100 | Setting is enabled when Pr. $30=" 1 "$ |

The parameter number in parentheses is the one for use with the parameter unit (FRPU04).

## <Setting>

When "100" is set in n16, the monitor value is different depending on whether the inverter is at a stop or running.

|  | n16 |  |  |  |  |  |
| :--- | :---: | :--- | :--- | :---: | :---: | :---: |
|  | $\mathbf{0}$ |  |  |  | $\mathbf{1 0 0}$ |  |
|  | During operation/stop | During stop | During operation |  |  |  |
| Output frequency | Output frequency | Set frequency | Output frequency |  |  |  |
| Output current | Output current |  |  |  |  |  |
| Alarm display | Alarm display |  |  |  |  |  |

## REMARKS

-During an error, the output frequency at error occurrence appears.
-During MRS, the values displayed are the same as during a stop.

## $\bullet$ Related parameters

$\bullet$-Speed display $\Rightarrow$ Pr. 37 "speed display" (refer to page 79)

### 2.16.5 Disconnected PU detection/PU setting lock selection ( n 17 min )

detection function of the parameter unit (FR-PU04) and the control source of the PU (operation panel, FR-PU04).

- Disconnected PU detection :This function detects that the parameter unit (FR-PU04) has been disconnected from the inverter for longer than 1 s and causes the inverter to provide an alarm output (PUE) and come to an alarm stop. When the PU has been disconnected since before power-on, it is not judged as an alarm.
- PU setting lock
:Control source of operation command, frequency command and parameter setting is restricted to the operation panel or parameter unit (FR-PU04).

| Parameter | Name | Factory <br> Setting | Setting <br> Range | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| n17 (993) | Disconnected PU detection/ <br> PU setting lock | 0 | $0,1,10$ | Setting is enabled when <br> Pr. $30=1 "$ |

The parameter number in parentheses is the one for use with the parameter unit (FRPU04).

## <Setting>

| n17 Setting | Disconnected PU Detection | PU Setting Lock |
| :---: | :--- | :--- |
| 0 | Operation is continued as-is if the PU is disconnected <br> (without disconnected PU detection) | Parameter unit (FR- <br> PU04) is valid |
| 1 | Inverter output is shut off when the PU is disconnected <br> (with disconnected PU detection) | Operation panel is <br> valid |
| 10 | Operation is continued as-is if the PU is disconnected <br> (without disconnected PU detection) | Pater |

* The monitor display and the $\square$
STO
are valid.

## REMARKS

When RS-485 communication operation is performed through the RS-485 connector, the reset selection/PU stop selection function is valid but the disconnected PU detection function is invalid.

## \. CAUTION

Do not reset the inverter while the start signal is being input.
Doing so will cause the inverter to start immediately after a reset, leading to hazardous conditions.

MEMO

# 3. PROTECTIVE FUNCTIONS 

This chapter explains the "protective functions" of this product.
Always read the instructions before using the equipment.
3.1 Errors (Alarms) ..... 154
3.2 Troubleshooting ..... 164

### 3.1 Errors (Alarms)

If any fault has occurred in the inverter, the corresponding protective function is activated to bring the inverter to an alarm stop and automatically give the corresponding error (alarm) indication on the PU display.
If your fault does not correspond to any of the following errors or if you have any other problem, please contact your sales representative.

- Retention of alarm output signal ..... When the magnetic contactor (MC) provided on the power supply side of the inverter is opened at the activation of the protective function, the inverter's control power will be lost and the alarm output will not be held.
- Alarm indication When the protective function is activated, the operation panel display automatically switches to the above indication.
- Resetting method When the protective function is activated, the inverter output is kept stopped. Unless reset, therefore, the inverter cannot restart. Switch power off once, then on again; or apply RES signal for more than 0.1 s . If the RES signal is kept on, "Err." appears (flickers) to indicate that the inverter is in a reset status.
- When the protective function is activated, take the appropriate corrective action, then reset the inverter, and resume operation.

### 3.1.1 Error (alarm) definitions

## (1) Major failures

When the protective function is activated, the inverter output is shut off and the alarm is output.

| Operation Panel Indication | OC1 | Overcurrent shut-off during acceleration |
| :---: | :--- | :--- | :--- |
| Name | When the inverter output current reaches or exceeds <br> approximately 200\% of the rated inverter current during <br> acceleration, the protective circuit is activated to stop the inverter <br> output. |  |
| Description | Check for sudden acceleration. <br> Check that the downward acceleration time is not long in vertical <br> lift application. <br> Check for output short-circuit/earth fault. |  |
| Check point | Increase the acceleration time. <br> Shorten the downward acceleration time in vertical lift application. |  |
| Corrective action |  |  |

| Operation Panel Indication | OC2 | SR-PU04 | Stedy Spd OC |
| :---: | :--- | :--- | :--- | :--- |
| Name | Overcurrent shut-off during constant speed |  |  |
| Description | When the inverter output current reaches or exceeds <br> approximately 200\% of the rated inverter current during constant- <br> speed operation, the protective circuit is activated to stop the <br> inverter output. |  |  |
| Check point | Check for sudden load change. <br> Check for output short-circuit/earth fault. |  |  |
| Corrective action | Keep load stable. |  |  |

| Operation Panel Indication | OC3 | 1010 | FR-PU04 | OC During Dec |
| :---: | :---: | :---: | :---: | :---: |
| Name | Overcurrent shut-off during deceleration |  |  |  |
| Description | When the inverter output current reaches or exceeds approximately $200 \%$ of the rated inverter current during deceleration (other than acceleration or constant speed), the protective circuit is activated to stop the inverter output. |  |  |  |
| Check point | Check for sudden speed reduction. <br> Check for output short-circuit/earth fault. <br> Check for too fast operation of motor's mechanical brake. |  |  |  |
| Corrective action | Increase the deceleration time. Adjust brake operation. |  |  |  |

| Operation Panel Indication | OV1 | İ118 | FR-PU04 | OV During Acc |
| :---: | :---: | :---: | :---: | :---: |
| Name | Regenerative overvoltage shut-off during acceleration |  |  |  |
| Description | When the main circuit DC voltage in the inverter rises to or above the specified value due to excessive regenerative energy during acceleration, the protective circuit is activated to stop the inverter output. The circuit may also be activated by a surge voltage produced in the power supply system. |  |  |  |
| Check point | Check for too slow acceleration. (e.g. during downward acceleration in vertical lift load) |  |  |  |
| Corrective action | - Decrease the acceleration time. <br> - Install a power factor improving reactor. |  |  |  |

| Operation Panel Indication | OV2 | Stedy Spd OV |
| :---: | :--- | :--- | :--- | :--- |
| Name | Regenerative overvoltage shut-off during constant speed |  |
| Description | When the main circuit DC voltage in the inverter rises to or above <br> the specified value due to excessive regenerative energy during <br> constant speed, the protective circuit is activated to stop the inverter <br> output. The circuit may also be activated by a surge voltage <br> produced in the power supply system. |  |
| Check point | Check for sudden load change. |  |
| Corrective action | Keep load stable. <br> - Install a power factor improving reactor. |  |

| Operation Panel Indication | OV3 | FR-PU04 | OV During Dec |
| :---: | :--- | :---: | :---: | :---: |
| Name | Regenerative overvoltage shut-off during deceleration or stop |  |  |
| Description | When the main circuit DC voltage in the inverter rises to or above <br> the specified value due to excessive regenerative energy during <br> deceleration or stop, the protective circuit is activated to stop the <br> inverter output. The circuit may also be activated by a surge <br> voltage produced in the power supply system. |  |  |
| Check point | Check for sudden speed reduction. |  |  |
| Corrective action | Incease the deceleration time. (Set the deceleration time which <br> matches the moment of inertia of the load) <br> Decrease the braking duty. <br> - Install a power factor improving reactor. |  |  |

| Operation Panel Indication | THM | $1-111$ | FR－PU04 | Motor Overload |
| :---: | :---: | :---: | :---: | :---: |
| Name | Motor overload shut－off（electronic thermal relay function）（＊1） |  |  |  |
| Description | The electronic thermal relay function in the inverter detects motor overheat due to overload or reduced cooling capability during low－ speed operation to stop the inverter output．When a multi－pole motor or two or more motors are run，provide a thermal relay on the output side of the inverter． Protection from burning due to motor temperature rise． |  |  |  |
| Check point | Check the motor for use under overload． |  |  |  |
| Corrective action | －Reduce the load weight． <br> －For a constant－torque motor，set the constant－torque motor in Pr． 71 ＂applied motor＂． |  |  |  |

| Operation Panel Indication | THT | $1^{\circ} \mathrm{Bi}$ | FR－PU04 | Inv．Overload |
| :---: | :---: | :---: | :---: | :---: |
| Name | Inverter overload shut－off（electronic thermal relay function）（＊1） |  |  |  |
| Description | If a current of more than $150 \%$ of the rated output current flows and overcurrent shut－off does not occur（ $150 \%$ or less），inverse－ time characteristics cause the electronic thermal relay function to be activated to stop the inverter output in order to protect the output transistors． <br> Output transistor protection from overheat |  |  |  |
| Check point | Check the motor for use under overload． |  |  |  |
| Corrective action | Reduce the load weight． |  |  |  |

＊1．Resetting the inverter initializes the internal thermal integratied data of the electronic thermal relay function．

| Operation Panel Indication | FIN | E1 | FR－PU04 | H／Sink O／Temp |
| :---: | :---: | :---: | :---: | :---: |
| Name | Fin overheat |  |  |  |
| Description | If the heatsink overheats，the temperature sensor is actuated to stop the inverter output． |  |  |  |
| Check point | －Check for too high ambient temperature． <br> －Check for heatsink clogging． |  |  |  |
| Corrective action | Set the ambient temperature to within the specifications． |  |  |  |
| Operation Panel Indication | GF | CIE | FR－PU04 | Earth Fault |
| Name | Start－time output side earth fault overcurrent protection |  |  |  |
| Description | This function stops the inverter output if an earth fault overcurrent flows due to an earth fault which occurred on the inverter＇s output （load）side．Made valid when Pr． 40 ＂start－time earth fault detection selection＂＝＂1＂． |  |  |  |
| Check point | Check for an earth fault in the motor and connection cable． |  |  |  |
| Corrective action | Remedy the earth fault portion． |  |  |  |

| Operation Panel Indication | OHT | External thermal relay (*2) |
| :---: | :--- | :--- | :--- |
| Name | If the external thermal relay provided for motor overheat protection <br> or the internally mounted temperature relay in the motor switches <br> on (contacts open), the inverter output is stopped. If the relay <br> contacts are reset automatically, the inverter will not restart unless <br> it is reset. |  |
| Description | - Check for motor overheating. <br> - Check that the value of 7 (OH signal) is set correctly in any of Pr. <br> 60 to Pr. 63 (input terminal function selection). |  |
| Check point | Reduce the load and operating duty. |  |
| Corrective action |  |  |

*2. Functions only when any of Pr. 60 to Pr. 63 (input terminal function selection) is set to OH .

| Operation Panel Indication | OLT | StII Prev STP |
| :---: | :--- | :--- | :--- | :--- |
| Name | Stall prevention (overload) |  |
| Description | The running frequency has fallen to 0 by stall prevention operation <br> activated. OL appears while stall prevention is being activated. |  |
| Check point | Check the motor for use under overload. |  |
| Corrective action | Reduce the load weight. |  |

| Operation Panel Indication | OPT | Communication error |
| :---: | :--- | :--- | :--- |
| Name | Stops the inverter output if a setting error or connection (connector) <br> fault occurs during use of RS-485 communication function. |  |
| Description | Check that the connector is plugged securely. |  |
| Check point | Make connection securely. <br> Please contact your sales representative. |  |
| Corrective action |  |  |

| Operation Panel Indication | PE | FR-PU04 | Corrupt Memory |
| :---: | :--- | :---: | :--- | :--- |
| Name | Parameter storage device alarm |  |  |
| Description | A fault occurred in parameters stored <br> (example: $\mathrm{E}^{2}$ PROM fault). |  |  |
| Check point | Check for too many number of parameter write times. |  |  |
| Corrective action | Please contact your sales representative. |  |  |

| Operation Panel Indication | PUE | FR-PU04 | PU Leave Out |
| :---: | :--- | :--- | :--- |
| Name | Parameter Unit disconnection |  |  |
| Description | Stops the inverter output if communication between inverter and <br> PU is suspended, e.g. if the PU is disconnected with "1" set in the <br> communication parameter n17 "disconnected PU detection/PU <br> setting lock". |  |  |
| Check point | - Check that the FR-PU04 is fitted securely. <br> - Check the setting of the communication parameter n17 <br> "disconnected PU detection". |  |  |
| Corrective action | Fit the FR-PU04 securely. |  |  |

| Operation Panel Indication | RET | FE | FR-PU04 | Retry No Over |
| :---: | :---: | :---: | :---: | :---: |
| Name | Retry count over |  |  |  |
| Description | If operation cannot be resumed properly within the number of retries set, this function stops the inverter output. |  |  |  |
| Check point | Find the cause of alarm occurrence. |  |  |  |
| Corrective action | Eliminate the cause of the error preceding this error indication. |  |  |  |

| Operation Panel Indication | CPU | Fil | FR-PU04 | CPU Fault |
| :---: | :--- | :---: | :--- | :--- |
| Name | CPU error |  |  |  |
| Description | lf the arithmetic operation of the built-in CPU does not end within a <br> predetermined period, the inverter self-determines it as an alarm <br> and stops the output. |  |  |  |
| Check point | - |  |  |  |
| Corrective action | Please contact your sales representative. |  |  |  |

## (2) Minor failures

When the protective function is activated, the output is not shut off. You can make parameter setting to output the minor fault signal. (Set "98" in any of Pr. 64, Pr. 65 (output terminal function selection). Refer to page 98.)

| Operation Panel Indication | FN | FR-PU04 | FN |
| :---: | :--- | :--- | :--- | :--- |
| Name | Fan trouble |  |  |
| Description | For the inverter which contains a cooling fan, Fr appears on the <br> operation panel when the cooling fan stops due to a fault. |  |  |
| Check point | Check the cooling fan for a fault. |  |  |
| Corrective action | Replace the fan. |  |  |

## (3) Warnings

| Operation Panel Indication | OL | 18 | FR-PU04 | OL |
| :---: | :---: | :---: | :---: | :---: |
| Name | Stall prevention (overcurrent) |  |  |  |
|  | During acceleration | If a current of more than $150 \%$ (* 3 ) of the rated inverter current flows in the motor, this function stops the increase in frequency until the overload current reduces to prevent the inverter from resulting in overcurrent shut-off. When the overload current has reduced below $150 \%$, this function increases the frequency again. |  |  |
| Description | During constantspeed operation | If a current of more than $150 \%$ (* 3 ) of the rated inverter current flows in the motor, this function lowers the frequency until the overload current reduces to prevent overcurrent shut-off. When the overload current has reduced below $150 \%$, this function increases the frequency up to the set value. |  |  |
|  | During deceleration | If a current of more than $150 \%$ (* 3 ) of the rated inverter current flows in the motor, this function stops the decrease in frequency until the overload current reduces to prevent the inverter from resulting in overcurrent shut-off. When the overload current has reduced below $150 \%$, this function decreases the frequency again. |  |  |
| Check point | Check the motor for use under overload. |  |  |  |
| Corrective action | - The acceleration/deceleration time may change. <br> - Increase the stall prevention operation level with Pr. 22 "stall prevention operation level", or disable stall prevention with Pr. 21 "stall prevention function selection". <br> - Check that the torque boost (Pr. 0) setting is not higher than required. |  |  |  |

*3. The stall prevention operation current can be set as desired. It is factory-set to $150 \%$.

| Operation Panel Indication | oL | I_ | FR-PU04 | oL |
| :---: | :--- | :---: | :---: | :---: |
| Name | Stall prevention (overvoltage) |  |  |  |
| Description | During <br> deceleration | lf the regenerative energy of the motor increases <br> too much to exceed the brake capability, this <br> function stops the decrease in frequency to prevent <br> overvoltage shut-off. As soon as the regenerative <br> energy has reduced, deceleration resumes. |  |  |
| Check point | Check for sudden speed reduction. |  |  |  |
| Corrective action | The deceleration time may change. Increase the deceleration time <br> using Pr. 8 "deceleration time". |  |  |  |

| Operation Panel Indication | UV |
| :---: | :--- |
| Name | Undervoltage <br> If the power supply voltage of the inverter reduces, the control <br> circuit will not operate properly and will result in decreased motor <br> torque or increased heat generation. To prevent this, if the power <br> supply voltage reduces below about 230VAC (about 115VAC for <br> the single-phase 200V power input series), this function stops the <br> inverter output. |
| Check point | Check for a start of large-capacity motor. <br> - Check that the power supply capacity is as indicated in the <br> specifications (Refer to page 168.). |
| Corrective action | Check the power supply system equipment such as the power <br> supply. |

(4) Write errors

| Operation Panel Indication | Er1 | Control Mode |
| :---: | :--- | :--- | :--- |
| Name | Write disable error |  |
| Description | Write was performed with "1" (write disable) set in Pr. 77 <br> "parameter write disable selection". <br> - Frequency jump setting range overlapped. <br> - |  |
|  | Parameter write was performed though the operation panel does |  |
| not have the write precedence. |  |  |

| Operation Panel Indication | Er2 | Write-while-running error/mode designation error |
| :---: | :--- | :--- | :--- |
| Name | - Write was performed during operation. <br> - An attempt was made to change the Pr. 79 setting to the <br> operation mode where the operation command has been input. <br> - Write was performed in the external operation mode. |  |
| Description | - After stopping operation, make parameter setting. <br> - After setting the operation mode to the "PU operation mode", <br> make parameter setting. (Refer to page 107.) |  |
| Corrective action |  |  |

| Operation Panel Indication | Er3 | Incr I/P |
| :---: | :--- | :--- | :--- | :--- |
| Name | Calibration error |  |
| Description | Analog input bias and gain calibration values are too close. |  |
| Corrective action | Check the settings of C3, C4, C6 and C7 (calibration functions). <br> (Refer to page 80.) |  |

### 3.1.2 To know the operating status at the occurrence of alarm (only when FR-PU04 is used)

When any alarm has occurred, the display automatically switches to the indication of the corresponding protective function (error). By pressing the MON at this point without resetting the inverter, the display shows the output frequency. In this way, it is possible to know the running frequency at the occurrence of the alarm. It is also possible to know the current in the same manner. After resetting, you can confirm the definitions in "Alarm History". (For details, refer to the instruction manual of the parameter unit (FR-PU04).)

### 3.1.3 Correspondence between digital and actual characters

There are the following correspondences between the actual alphanumeric characters and the digital characters displayed on the operation panel:

| Actual | Display | Actual | Display | Actual | Display |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | $\left[\begin{array}{ll} 17 \\ \hline \end{array}\right.$ | A | 位 | M | 619 |
| 1 | , | B | $[-1$ | N | -1) |
| 2 | $\because$ | C | $\left[\begin{array}{ll} 1-1 \\ \hline 10 \end{array}\right.$ | 0 | 101 |
| 3 | El | D | $E-1$ | 0 | - |
| 4 | -1 | E | $12$ | (1) | (1-1) |
| 5 | $5$ | (F) | $\underset{16}{16}$ | S | -1 |
| 6 | E- | G | $\left[\begin{array}{l} 1-1 \\ \hline 10 \end{array}\right.$ | T | 1 |
| 7 | 17 | H | -1) | U | [10 |
| 8 | 任 | 1 | 1 | V | -1 |
| 9 | $\because$ | J | -1 | $\square$ | - |
|  |  | ( ) | 1 | $\square$ | - |

### 3.1.4 Resetting the inverter

The inverter can be reset by performing any of the following operations. Note that the internal thermal integrated value of the electronic thermal relay function and the number of retries are cleared (erased) by resetting the inverter.
Recover about 1 s after reset is cancelled.
Err.(Err) flickers on the operation panel during reset.
Operation 1 ....... Using the operation panel, perform a reset with the $\frac{\text { STOP }}{\text { SESET }}$. (Enabled only when the inverter protective function is activated (major failure))
Operation 2........ Switch power off once, then switch it on again after the LED turns off.
Operation 3 ....... Turn on the reset signal (RES). (Assign this signal to any of Pr. 60 to Pr. 63.) (Refer to page 34, 96.)

### 3.2 Troubleshooting

## POINTS

If the cause is still unknown after every check, it is recommended to initialize the parameters (return to factory setting) then re-set the required parameter values and check again.

### 3.2.1 Motor remains stopped

1) Check the main circuit

Check that a proper power supply voltage is applied (operation panel display is provided).
Check that the motor is connected properly.
Check that the jumper across +-P 1 is connected.
2) Check the input signals

Check that the start signal is input.

- Check that both the forward and reverse rotation start signals are not input simultaneously.
Check that the frequency setting signal is not zero.
Check that the AU signal is on when the frequency setting signal is 4 to 20 mA .
Check that the output stop signal (MRS) or reset signal (RES) is not on. (Assign signals MRS and RES using Pr. 60 to Pr. 63 (input terminal function selection).)
- Check that the sink or source jumper connector is fitted securely.

## 3) Check the parameter settings

- Check that the reverse rotation prevention (Pr. 78) is not selected.
- Check that the operation mode (Pr. 79) setting is correct.
- Check that the bias and gain (C2 to C7) settings are correct.
- Check that the starting frequency (Pr. 13) setting is not greater than the running frequency.
Check that various operational functions (such as three-speed operation), especially the maximum frequency (Pr. 1), are not zero.

4) Check the load

- Check that the load is not too heavy.

Check that the shaft is not locked.
5) Others

Check that the operation panel display does not show an error (e.g. OC1). Check that the Pr. 15 "jog frequency" setting is not lower than the Pr. 13 "starting frequency" value.

## 3．2．2 Motor rotates in opposite direction

－Check that the phase sequence of output terminals $\mathrm{U}, \mathrm{V}$ and W is correct．
－Check that the start signals（forward rotation，reverse rotation）are connected properly．
Check the setting of Pr． 17 ＂RUN key rotation direction selection＂．

## 3．2．3 Speed greatly differs from the setting

Check that the frequency setting signal is correct．（Measure the input signal level．）
－Check that the following parameter settings are correct（Pr．1，Pr．2，Pr．19，
Pr．38，Pr．39，Pr．95，C2 to C7）．
－Check that the input signal lines are not affected by external noise．（Use shielded cables）
Check that the load is not too heavy．

## 3．2．4 Acceleration／deceleration is not smooth

－Check that the acceleration and deceleration time settings are not too short．
－Check that the load is not too heavy．
Check that the torque boost setting is not too large to activate the stall prevention function．

## 3．2．5 Motor current is large

Check that the load is not too heavy．
Check that the torque boost setting is not too large．

## 3．2．6 Speed does not increase

Check that the maximum frequency setting is correct．
Check that the load is not too heavy．（In agitators，etc．，load may become heavier in winter．）
Check that the torque boost setting is not too large to activate the stall prevention function．

## 3．2．7 Speed varies during operation

When slip compensation is selected，the output frequency varies with load fluctuation between 0 and 2 Hz ．This is a normal operation and is not a fault．
1）Inspection of load
－Check that the load is not varying．
2）Inspection of input signal
－Check that the frequency setting signal is not varying．
－Check that the frequency setting signal is not affected by noise．
Check for a malfunction due to an undesirable current when the transistor output unit is connected．（Refer to page 21．）
3）Others
Check that the wiring length is not too long．
Check that $\mathrm{GD}^{2}$ load is not small．（at the motor $\mathrm{GD}^{2}$ or smaller） FR－S540E－1．5K to 3.7 K If so，set the Pr． 72 ＂PWM frequency selection＂to 6 kHz or higher． （Check for noise or leakage current problem．）

### 3.2.8 Operation mode is not changed properly

If the operation mode does not change correctly, check the following:

1. External input signal ............ Check that the STF or STR signal is off.

When it is on, the operation mode cannot be changed.
2. Parameter setting

Check the Pr. 79 setting.
When the Pr. 79 "operation mode selection"
setting is " 0 ", switching input power on places the inverter in the external operation mode.
Press the $\left(\frac{\text { PU }}{\text { EXT }}\right)$ to switch to the PU operation mode.
For other settings (1 to 8), the operation mode is limited accordingly.
(For details of Pr. 79, refer to page 107.)

### 3.2.9 Operation panel display is not operating

- Make sure that terminals PC-SD are not shorted.
- Make sure that the connector is fitted securely across terminals +- P1.

### 3.2.10 Parameter write cannot be performed

- Make sure that operation is not being performed (signal STF or STR is not ON).
- Check that the SET (WRITE) was pressed.
- Make sure that you are not attempting to set the parameter outside the setting range.
- Make sure that you are not attempting to set the parameter in the external operation mode.
— Check Pr. 77 "parameter write disable selection".

### 3.2.11 Motor produces annoying sound

Check the Pr. 70 "Soft-PWM setting" and Pr. 72 "PWM frequency selection" settings.
Make sure that the deceleration time is not too short.

## 4. SPECIFICATIONS

This chapter provides the "specifications" of this product. Always read the instructions before using the equipment
4.1 Specification list ..... 168
4.2 Outline drawings ..... 172

### 4.1 Specification list

### 4.1.1 Ratings

(1) Three-phase 400 V power supply

| Type FR-S540E- $\square$ K-EC | 0.4 | 0.75 | 1.5 | 2.2 | 3.7 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Applied motor capacity (kW) (*1) | 0.4 | 0.75 | 1.5 | 2.2 | 3.7 |
| Rated capacity (kVA) (*2) | 0.9 | 1.6 | 2.7 | 3.7 | 5.9 |
| 글 Rated current (A) | 1.1 | 2.1 | 3.5 | 4.8 | 7.7 |
| $\bigcirc$ Overload current rating (*3) | 150\% 60s, 200\% 0.5s (Inverse time characteristics) |  |  |  |  |
| Voltage (*4) | Three phase, 380 V to $480 \mathrm{~V} 50 \mathrm{~Hz} / 60 \mathrm{~Hz}$ |  |  |  |  |
| 入 Rated input AC voltage/frequency | Three phase, 380 V to $480 \mathrm{~V} 50 \mathrm{~Hz} / 60 \mathrm{~Hz}$ |  |  |  |  |
| 을 Permissible AC voltage fluctuation | 325 to $528 \mathrm{~V} 50 \mathrm{~Hz} / 60 \mathrm{~Hz}$ |  |  |  |  |
| ふ Permissible frequency fluctuation | $\pm 5 \%$ |  |  |  |  |
| $\aleph_{0}$ $\begin{array}{l}\text { Power supply system capacity } \\ \text { (kVA) (*5) }\end{array}$ | 1.5 | 2.5 | 4.5 | 5.5 | 9.5 |
| Protective structure (JEM1030) | Enclosed type (IP20) |  |  |  |  |
| Cooling system | Self-cooling |  | Forced air cooling |  |  |
| Approximate mass (kg) | 1.5 | 1.5 | 1.5 | 1.6 | 1.7 |

*1. The applied motor capacity indicated is the maximum capacity applicable for use of the Mitsubishi 4-pole standard motor.
*2. The rated output capacity indicated assumes that the output voltage is 440V.
*3. The \% value of the overload current rating indicates the ratio of the overload current to the inverter's rated output current.
For repeated duty, allow time for the inverter and motor to return to or below the temperatures under $100 \%$ load.
*4. The maximum output voltage does not exceed the power supply voltage. You can set the maximum output voltage to any value below the power supply voltage. However, the pulse voltage value of the inverter output side voltage remains unchanged at about $\sqrt{2}$ that of the power supply.
*5. The power supply capacity varies with the value of the power supply side inverter impedance (including those of the input reactor and cables).
(2) Single-phase 200V power supply

| Type FR-S520SE-■K-EC | 0.2 | 0.4 | 0.75 | 1.5 |
| :---: | :---: | :---: | :---: | :---: |
| Applicable motor capacity (kW) (*1) | 0.2 | 0.4 | 0.75 | 1.5 |
| Rated capacity (kVA) (*2) | 0.5 | 1.0 | 1.6 | 2.8 |
| 膏 Rated current (A) | 1.4 | 2.5 | 4.1 | 7.0 |
| O. Overload current rating (*3) | 150\% 60s, 200\% 0.5s (Inverse time characteristics) |  |  |  |
| Voltage (*4) | Three phase, 200 V to $240 \mathrm{~V} 50 \mathrm{~Hz} / 60 \mathrm{~Hz}$ |  |  |  |
| 入 Rated input AC voltage/frequency | Single-phase, 200 V to $240 \mathrm{~V} 50 \mathrm{~Hz} / 60 \mathrm{~Hz}$ |  |  |  |
| 윽 Permissible AC voltage fluctuation | 170 to $264 \mathrm{~V} 50 \mathrm{~Hz} / 60 \mathrm{~Hz}$ |  |  |  |
| ¢ Permissible frequency fluctuation | $\pm 5 \%$ |  |  |  |
| ${ }_{30}$ Power supply system capacity (kVA) (*5) | 0.9 | 1.5 | 2.5 | 4.4 |
| Protective structure (JEM1030) | Enclosed type (IP20) |  |  |  |
| Cooling system | Self-cooling |  |  | Forced air cooling |
| Approximate mass (kg) | 0.6 | 0.8 | 1.0 | 1.5 |

*1. The applied motor capacity indicated is the maximum capacity applicable when a Mitsubishi 4 -pole standard motor is used.
*2. The rated output capacity indicated assumes that the output voltage is 230 V .
*3. The \% value of the overload current rating indicates the ratio of the overload current to the inverter's rated output current.
For repeated duty, allow time for the inverter to return to or below the temperatures under $100 \%$ load.
*4. The maximum output voltage does not exceed the power supply voltage. The maximum output voltage may be set as desired below the power supply voltage. However, the PWM pulse voltage value of the inverter output side voltage remains unchanged at about $\sqrt{2}$ that of the power supply.
*5. The power supply capacity changes with the values of the power supply side inverter impedances (including those of the input reactor and cables).

\hline
\end{tabular}

| Operational <br> functions |  |  |  |  |  |  |  |  | Maximum and minimum frequency settings, frequency jump <br> operation, external thermal relay input selection, automatic <br> restart after instantaneous power failure, forward/reverse <br> rotation prevention, slip compensation, operation mode <br> selection, PID control, computer link operation (RS-485). |
| :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |

*1. When undervoltage or instantaneous power failure occurs, no alarm output is provided but the output is shut off. After power restoration, the inverter may be run as it is. Depending on the running status (e.g. load magnitude), however, overcurrent, regenerative overvoltage or other protection may be activated at power restoration. (in the external operation mode)
*2. The braking torque indicated is a short-duration average torque (which varies with motor loss) when the motor alone is decelerated from 60 Hz in the shortest time and is not a continuous regenerative torque. When the motor is decelerated from the frequency higher than the base frequency, the average deceleration torque will reduce.
*3. Compatible with only the product having the built-in cooling fan.
*4. Activated only when "1 (factory setting)" is set in Pr. 40 "start-time earth fault detection selection".
*5. Activated only when external thermal relay input (OH) is selected in any of Pr. 60 to Pr. 63 (input terminal function selection).
*6. Temperature applicable for a short period such as transportation.

### 4.2 Outline drawings

-FR-S520SE-0.2K, 0.4K, 0.75K-EC

The parameter numbers in parentheses are those for use with the parameter unit (FRPU04).

* Though parameter setting by RS-485 communication can be made in the setting increments indicated in the table, note that the valid setting increments are as indicated in the parameter list (page 46).
*The manual number is given on the bottom left of the back cover.

[^0]:    CAUTION
    The power factor improving capacitor and surge suppressor on the inverter output side may be overheated or damaged by the harmonic components of the inverter output. Also, since an excessive current flows in the inverter to activate overcurrent protection, do not provide a capacitor and surge suppressor on the inverter output side when the motor is driven by the inverter. To improve the power factor, insert a power factor improving reactor on the inverter's primary side or DC circuit. For full information, refer to page 15.

[^1]:    CAUTION
    -When two or more motors are connected to the inverter, they cannot be protected by the electronic thermal relay function. Install an external thermal relay to each motor.
    -When a difference between the inverter and motor capacities is large and the setting becomes less than half amount of the inverter rated current, the protective characteristics of the electronic thermal relay function will be deteriorated. In this case, use an external thermal relay.
    -A special motor cannot be protected by the electronic thermal relay function. Use an external thermal relay.

[^2]:    CAUTION
    Using Pr. 64 or Pr. 65 to change the terminal assignment may affect the other functions. Please make setting after confirming the function of each terminal. (Refer to page 98.)
    $\bullet$ Related parameters

    - Assignment of SU signal to terminal $\Rightarrow$ Pr. 64 "RUN terminal function selection", Pr. 65 "A, B, C terminal function selection" (refer to page 98)

[^3]:    CAUTION
    -If the current falls below the preset detection level but the timing condition is not satisfied, the zero current detection signal is held on for about 100 ms .
    -When the terminal functions are changed using Pr. 64, Pr. 65, the other functions may be affected. Please make setting after confirming the function of each terminal.
    -When running (connecting) multiple motors with one inverter in due order, the zero current detection signal (Y13) may be output. Set $13 \%$ or more for the 0.1 K and $8 \%$ or more for the 0.2 K .
    (when the total capacity of motors is less than the zero current detection level and the motor capacity per inverter is less than the zero current detection level)

    - Related parameters $\downarrow$
    - Assignment of Y 13 signal to terminal $\Rightarrow$ Pr. 64 "RUN terminal function selection", Pr. 65 "A, B, C terminal function selection" (refer to page 98)
