Contact expansion module for increasing the number of available contacts

Approvals

	PZE X4.1P
	◆
	◆
	◆

Unit features

- ▶ Positive-guided relay outputs:
 - 4 safety contacts (N/O), instantaneous
- ▶ Safe separation of safety contacts 13-14, 23-24, 33-34 from input circuits K1-U-K2 and feedback loop Y1-Y2
- ▶ LED indicator for:
 - Switch status channel 1/2
 - Supply voltage
- ▶ Plug-in connection terminals (either spring-loaded terminal or screw terminal)
- ▶ Suitable to be driven via a semiconductor output
- ▶ See order reference for unit types

Unit description

The unit meets the requirements of EN 60204-1 and IEC 60204-1. The contact expansion module is used to increase the number of contacts available on a base unit. Base units are all

- ▶ Safety relays with feedback loop
- ▶ Programmable safety systems with feedback loop
- ▶ Units with OSSD semiconductor outputs and feedback loop

The category that can be achieved in accordance with EN 954-1 and EN ISO 13849-1 depends on the category of the base unit. The contact expansion module may not exceed this.

Safety features

The unit meets the following safety requirements:

- ▶ The contact expansion module expands an existing circuit. As the output relays are monitored via the base unit's feedback loop, the safety functions on the existing circuit are transferred to the contact expansion module.
- ▶ The safety function remains effective in the case of a component failure.
- ▶ Earth fault in the feedback loop: Detected, depending on the base unit that is used.
- ▶ Earth fault in the input circuit: The output relays de-energise and the safety contacts open.

Block diagram

* Safe separation in accordance with EN 60947-1, 6 kV (see unit features)

Up to PL e of EN ISO 13849-1 PZE X4.1P

Function description

- ▶ Single-channel operation: one input circuit affects both output relays
- ▶ Dual-channel operation:
 - two redundant input circuits affect one output relay
- Detection of shorts across contacts only possible with pulsed inputs

Timing diagram

Key

- ▶ Power: Supply voltage
- ▶ Input: Input circuits K1-U-K2
- ▶ Output safe: Safety contacts 13-14, 23-24, 33-34, 43-44
- ▶ Feedback: Feedback loop Y1-Y2
- ▶ t_1 : Switch-on delay
- ▶ t_2 : Delay-on de-energisation

Wiring

Please note:

- ▶ Information given in the “Technical details” must be followed.
- ▶ Outputs 13-14, 23-24, 33-34, 43-44 are safety contacts.
- ▶ To prevent contact welding, a fuse should be connected before the output contacts (see technical details).
- ▶ Calculation of the max. cable runs l_{max} in the input circuit:

$$l_{max} = \frac{R_{lmax}}{R_l / km}$$

R_{lmax} = max. overall cable resistance (see technical details)

R_l / km = cable resistance/km

- ▶ Use copper wire that can withstand 60/75 °C.
- ▶ Sufficient fuse protection must be provided on all output contacts with capacitive and inductive loads.

Preparing for operation

► Supply voltage

Supply voltage	AC	DC
Only when driven via safety relay with safety contacts		

► Input circuit

Input circuit	Single-channel	Dual-channel
Base unit: PNOZ X safety relay Driven via safety contacts		
Base unit: PNOZelog safety relay, programmable safety system or PNOZmulti Driven via safe semiconductor outputs (24 VDC)		

► Feedback loop

Feedback loop	Base unit: PNOZ X safety relay	Base unit: PNOZelog safety relay, programmable safety system or PNOZmulti
Y1, Y2 and Input are inputs on the base unit; they evaluate the feedback loop		

Up to PL e of EN ISO 13849-1 PZE X4.1P

Terminal configuration

Installation

- ▶ The safety relay should be installed in a control cabinet with a protection type of at least IP54.
- ▶ Use the notch on the rear of the unit to attach it to a DIN rail.
- ▶ Ensure the unit is mounted securely on a vertical DIN rail (35 mm) by using a fixing element (e.g. retaining bracket or an end angle).

Dimensions

* with spring-loaded terminals
