Application

19" compatible power supplies are used to supply controls and systems with the required direct voltage. They are pluggable power supplies with a compact design and high efficiency.

3.3, 5, 12, 15, 24, 48 and 60 volts are available as standard output voltages.

Other output voltages available on request.

Electrical design

The inputs and outputs are on the rear side using standardized male connectors to DIN 41612.

A primary fuse is mounted in the power supplies.

Operation is displayed at the front with LEDs.

Mechanical design

Power supplies are 3 or 6 units (U) and a printed board depth of 160 mm.

Depending on the output power, the power supplies have a width of 6 to 28 units (HP).

Heat dissipation

Power supply heat dissipation is achieved without fans, and is possible up to an ambient temperature of 70°C. Output derating is from 40°C to 50°C.

Standards/approvals

The power supplies are CE-certified and UL- and VDE/LGA-approved. Approval to EN 60950 applies to AC mains operation.

The exterior dimensions of the systems correspond to the 19" standard DIN 41494, Part 1 and the mounting dimensions for the plug-in units to DIN 41494 Part 5.
