

LP2 modular probe system for tool setting and workpiece inspection

www.renishaw.com/lp2

LP2 probe systems include a wide range of styli and accessories to provide customised installations

LP2 compact probes are sealed for use within the machine's hostile environment of coolant and hot metal chips.

H versions have a higher spring force, which allows use of longer styli, and greater resistance to machine vibration.

DD versions are specified for applications subject to particle laden coolant. The diaphragm material is resistant to coolants and elevated temperatures. However, if the probe is subjected to continual exposure to hot metal chips, use of the swarf deflector is recommended.

System features

Principal application

- **Horizontal lathes**
Small enough to fit on turret for part measuring, tool setting and broken tool detection when mounted in a suitable position.
- **Machining centre applications**
Set-up and part measuring when spindle mounted. Tool setting and broken tool detection when table mounted.

Compact and robust

Ø25 x 40.8 mm long (Ø0.98 x 1.6 in long).

Probe sealing

Sealed to IPX8.

Repeatability

Inherent repeatability with all stylus configurations.

Modular extensions and adaptors

Provide ready made installation solutions.

Stylus weak link protects probe in event of a collision (optional)

Signal transmission systems

- **Hard wired** - for machining centres with manual tool change. The LP2 is used with the MA2 probe holder.
- **Inductive** - for machining centres and lathes, eliminates the need for probe batteries.
- **Optical** - for lathes.
Easy installation, particularly in retrofit applications as there is no need for prepared passageways required for inductive transmission cables. The LP2 fits onto LTO2/LTO2S/LTO2T/LTO3T optical modules.

Software for probe routines

- Renishaw supplies an extensive suite of probing routines for the majority of machine controllers.

LP2 system

Representative examples of the LP2 modular system are shown below. More comprehensive information is provided on the Data sheets listed on the next page. Please consult your local supplier for installation advice.

Maintenance

The probe system requires only minimum maintenance. Periodically clean the probe's front seal and check the security of wiring.

Stylus alignment

Workpiece inspection Adaptors and holders incorporate adjusters to enable the stylus to be aligned with the spindle centre line.

Tool setting

Square tip styli can be adjusted to align with the machine's X/Y axes. Further fine rotational adjustment is provided with probe socket FS1.

Parts list – please quote the part number when ordering equipment

Type	Part no.	Description
LP2	A-2063-6098	LP2 probe supplied with two C spanners and TK1 tool kit.
LP2H	A-2064-0002	LP2H probe supplied with two C spanners and TK1 tool kit.
LP2 DD	A-2063-8020	LP2 DD probe supplied with two C spanners and TK1 tool kit.
LP2H DD	A-2064-0032	LP2H DD probe supplied with two C spanners and TK1 tool kit.
TK1	A-2053-7531	Probe tool kit comprising: Ø1.98 mm stylus tool, 1.5 mm AF hexagon key, 2.0 mm AF hexagon key, 2.5 mm AF hexagon key, 3.0 mm AF hexagon key and 4.0 mm AF hexagon key.
C spanner	A-2063-7587	C spanner: One required for fitting probe to machine. Two required to connect probe to extension bar or removing front cap for cleaning.
DK2 kit	A-2063-7542	Service kit for LP2 and LP2H comprising: Front cap, metal eyelid, spring and rear O ring.
DDCK kit	A-2063-8023	Diaphragm conversion kit: Converts LP2 to LP2DD or LP2H to LP2H DD comprising: Two C spanners, front ring, outer diaphragm and rear O ring.
DDRK kit	A-2063-8030	Diaphragm replacement kit for LP2 DD and LP2H DD comprising: Outer diaphragm and rear O ring.
SA8	M-5000-7582	Stylus adaptor with break protection.
SD1	M-2063-8003	Swarf deflector.
