Safety Guidelines

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

 DANGER
indicates that death or severe personal injury will result if proper precautions are not taken.
 WARNING
indicates that death or severe personal injury may result if proper precautions are not taken.
 CAUTION
with a safety alert symbol, indicates that minor personal injury can result if proper precautions are not taken.
CAUTION
without a safety alert symbol, indicates that property damage can result if proper precautions are not taken.
NOTICE
indicates that an unintended result or situation can occur if the corresponding information is not taken into account.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The device/system may only be set up and used in conjunction with this documentation. Commissioning and operation of a device/system may only be performed by **qualified personnel**. Within the context of the safety notes in this documentation qualified persons are defined as persons who are authorized to commission, ground and label devices, systems and circuits in accordance with established safety practices and standards.

Prescribed Usage

Note the following:

 WARNING
This device may only be used for the applications described in the catalog or the technical description and only in connection with devices or components from other manufacturers which have been approved or recommended by Siemens. Correct, reliable operation of the product requires proper transport, storage, positioning and assembly as well as careful operation and maintenance.

Trademarks

All names identified by ® are registered trademarks of the Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Foreword

SINAMICS Documentation

The SINAMICS documentation is organized in 2 parts:

- General documentation / catalogs
- Manufacturer/service documentation

A monthly overview of publications with the available languages is available on the Internet at:

<http://www.siemens.com/motioncontrol>

Follow menu items "Support" → "Technical Documentation" → "Ordering Documentation" → "Printed Documentation"

The Internet version of DOConCD (DOConWEB) is available in the Internet:

<http://www.automation.siemens.com/doconweb>

Information on the range of training courses and FAQs (Frequently Asked Questions) are available in the Internet:

<http://www.siemens.com/motioncontrol>

Follow the menu item "Support".

Usage phases and the available tools/documents

Table 1 Usage phase and the available tools / documents

Usage phase	Tools/documents
Orientation	SINAMICS S Sales Documentation
Planning/configuration	SIZER engineering tool Configuration Manuals, Motors
Decision making / ordering	SINAMICS S catalogs
Installation / assembly	<ul style="list-style-type: none"> • SINAMICS S120 Equipment Manual for Control Units and Supplementary System Components • SINAMICS S120 Equipment Manual Power Modules Booksize • SINAMICS S120 Equipment Manual Power Modules in chassis format • SINAMICS S150 operating instructions
Commissioning	<ul style="list-style-type: none"> • STARTER parameterization and commissioning tool • SINAMICS S120 Getting Started • SINAMICS S120 Commissioning Manual • SINAMICS S120 CANopen Commissioning Manual • SINAMICS S List Manual • SINAMICS S150 operating instructions

Usage phase	Tools/documents
Usage / operation	<ul style="list-style-type: none">• SINAMICS S120 Commissioning Manual• SINAMICS S List Manual• SINAMICS S150 operating instructions
Maintenance/servicing	<ul style="list-style-type: none">• SINAMICS S120 Commissioning Manual• SINAMICS S List Manual• SINAMICS S150 operating instructions

Target group

This documentation is aimed at machine manufacturers, commissioning engineers, and service personnel who use SINAMICS.

Benefits

This documentation contains the comprehensive information about parameters, function diagrams and faults and alarms required to commission and service the system.

This manual should be used in addition to the other manuals and tools provided for the product.

Standard scope

The scope of the functionality described in this document can differ from the scope of the functionality of the drive system that is actually supplied.

- Other functions not described in this documentation might be able to be executed in the drive system. This does not, however, represent an obligation to supply such functions with a new control or when servicing.
- Functions can be described in the documentation that are not available in a particular product version of the drive system. The functionality of the supplied drive system should only be taken from the ordering documentation.
- Extensions or changes made by the machine manufacturer must be documented by the machine manufacturer.

For reasons of clarity, this documentation does not contain all of the detailed information on all of the product types. This documentation cannot take into consideration every conceivable type of installation, operation and service/maintenance.

Search tools

The following guides are provided to help you locate information in this manual:

1. General table of contents for the complete manual (after the preface).
2. List of abbreviations
3. References.
4. Index

Technical Support

If you have any questions, please contact our hotline:

	Europe/Africa
Telephone	+49 180 5050 - 222
Fax	+49 180 5050 - 223
Internet	http://www.siemens.de/automation/support-request

	America
Telephone	+1 423 262 2522
Fax	+1 423 262 2200
E-mail	mailto:techsupport.sea@siemens.com

	Asia/Pacific
Telephone	+86 1064 719 990
Fax	+86 1064 747 474
E-mail	mailto:adsupport.asia@siemens.com

Note

You will find telephone numbers for other countries for technical support in the Internet:
<http://www.siemens.com/automation/service&support>

Calls are charged (e.g. € 0.14/min from land lines within Germany). Tariffs of other telephone providers may differ.

Spare parts

Spare parts are available on the Internet at:
<http://support.automation.siemens.com/WW/view/de/16612315>

Questions about the documentation

If you have any questions (suggestions, corrections) regarding this technical documentation, please fax or e-mail us at:

Fax	+49 9131 98 63315
E-mail	mailto:docu.motioncontrol@siemens.com

A fax form is at the end of this document.

Internet address for SINAMICS

<http://www.siemens.com/sinamics>.

EC Declarations of Conformity

The EC Declaration of Conformity for the EMC Directive can be found/obtained:

- in the Internet:
<http://support.automation.siemens.com>
under the Product/Order No. 15257461
- with the responsible branch office of the A&D MC Business Division of Siemens AG.

The EC Declaration of Conformity for the Low-Voltage Directive can be found/obtained

- in the Internet:
<http://support.automation.siemens.com>
under the Product/Order No. 22383669

Note

When operated in dry areas, SINAMICS equipment conforms to the Low-Voltage Directive 73/23/EEC and 2006/95/EC.

Note

In the configuration specified in the corresponding EC Declaration of Conformity regarding EMC requirements and when the EMC installation guideline (order no. 6FC5297-0AD30-0□P□) is observed, SINAMICS devices fulfill EMC Directive 89/336/EEG and 2004/108/EG.

ESD information

 CAUTION
<p>Electrostatic sensitive devices (ESDs) are individual components, integrated circuits, or boards that may be damaged by either electrostatic fields or electrostatic discharge.</p> <p>Regulations for handling ESD components:</p> <p>When handling components, make sure that personnel, workplaces, and packaging are well earthed.</p> <p>Personnel may only come into contact with electronic components, if</p> <ul style="list-style-type: none">• They are grounded with an ESD wrist band, or• They are in ESD areas with conductive flooring, ESD shoes or ESD grounding straps. <p>Electronic boards should only be touched if absolutely necessary. They must only be handled on the front panel or, in the case of printed circuit boards, at the edge.</p> <p>Electronic boards must not come into contact with plastics or items of clothing containing synthetic fibers.</p> <p>Boards must only be placed on conductive surfaces (work surfaces with ESD surface, conductive ESD foam, ESD packing bag, ESD transport container).</p> <p>Do not place boards near display units, monitors, or television sets (minimum distance from screen: 10 cm).</p> <p>Measurements can only be taken on electronic boards when the measuring device is grounded (e.g. via protective conductors) or when the measuring probe is briefly discharged before measurements are taken with an isolated measuring device (e.g. touching a bare metal housing).</p>

Safety information

 DANGER
<p>Commissioning must not start until you have ensured that the machine, in which the components described here are installed, complies with the Machinery Directive 98/37/EC.</p> <p>Only appropriately qualified personnel may mount/install, commission and service the SINAMICS S units.</p> <p>The personnel must take into account the information provided in the technical customer documentation for the product, and be familiar with and observe the specified danger and warning notices.</p> <p>Operational electrical equipment and motors have parts and components which are at hazardous voltage levels, that if touched, can result in severe bodily injury or death.</p> <p>All work on the electrical system must be carried out when the system has been disconnected from the power supply.</p>

 **DANGER**

Correct and safe operation of SINAMICS S drive units assumes correct transportation in the transportation packaging, correct long-term storage in the transport packaging, setup and installation, as well as careful operation and maintenance.

The details in the Catalogs and proposals also apply to the design of special equipment versions.

In addition to the danger and warning information provided in the technical customer documentation, the applicable national, local, and system-specific regulations and requirements must be taken into account.

To ensure compliance with EN 61800-5-1 and UL 508, only safety extra-low voltages from the electronics modules may be connected to connections and terminals.

 **DANGER**

Using protection against direct contact via DVC A (PELV) is only permissible in areas with equipotential bonding and in dry rooms indoors. If these conditions are not fulfilled, then other protective measures against electric shock must be used (e.g. protection using protective impedances or limited voltage or using protective classes I and II).

 **DANGER**

Electrical, magnetic, and electromagnetic fields (EMF) occurring during operation can pose a danger to people in the direct vicinity of the product, especially people with pacemakers, implants, or similar.

The relevant directives and standards must be observed by the machine/plant operators and people present in the vicinity of the product. These are, for example, EMF Directive 2004/40/EEC and standards EN 12198-1 to -3 applying to the European Economic Area (EEA) and in Germany the accident prevention regulation BGV 11 and the associated rule BGR 11 "Electromagnetic fields" from the German employer's liability accident insurance association.

These state that a hazard analysis must drawn up for every workplace, from which measures for reducing dangers and their impact on people are derived and applied, and exposure and danger zones are defined and observed.

The relevant safety notes in each chapter must be observed.

 **DANGER**

As part of routine tests, SINAMICS S components will undergo a voltage test in accordance with EN 61800-5-1. Before the voltage test is performed on the electrical equipment of machines acc. to EN 60204-1, Section 19.4, all connectors of SINAMICS equipment must be disconnected/unplugged to prevent the equipment from being damaged.

Motors should be connected-up corresponding to the circuit diagram supplied with the motor (refer to the connection examples, Motor Modules). They must not be connected directly to the three-phase supply because this will damage them.

 **WARNING**

Operating the equipment in the immediate vicinity (< 1.8 m) of mobile telephones with a transmitter power of > 1 W may cause the equipment to malfunction.

Explanation of symbols

The symbols are in accordance with IEC 617-2.

Table 2 Symbols

Symbol	Meaning
	Protective earth (PE)
	Ground (e.g. M 24 V)
	Functional ground Equipotential bonding

Residual risks of power drive systems

When carrying out a risk assessment of the machine in accordance with the EU Machinery Directive, the machine manufacturer must consider the following residual risks associated with the control and drive components of a power drive system (PDS).

1. Unintentional movements of driven machine components during commissioning, operation, maintenance, and repairs caused by, for example:
 - Hardware defects and/or software errors in the sensors, controllers, actuators, and connection technology
 - Response times of the controller and drive
 - Operating and/or ambient conditions not within the scope of the specification
 - Parameterization, programming, cabling, and installation errors
 - Use of radio devices / cellular phones in the immediate vicinity of the controller
 - External influences / damage
2. Exceptional temperatures as well as emissions of light, noise, particles, or gas caused by, for example:
 - Component malfunctions
 - Software errors
 - Operating and/or ambient conditions not within the scope of the specification
 - External influences / damage
3. Hazardous shock voltages caused by, for example:
 - Component malfunctions
 - Influence of electrostatic charging
 - Induction of voltages in moving motors
 - Operating and/or ambient conditions not within the scope of the specification
 - Condensation / conductive contamination
 - External influences / damage
4. Operational electrical, magnetic, and electromagnetic fields that can pose a risk to people with a pacemaker and/or implants or metallic objects if they are too close.
5. Release of environmentally hazardous materials and emissions during improper operation and / or improper disposal of components.

For more information about residual risks of the power drive system components, see the relevant chapters in the technical user documentation.

System overview

1.1 Field of application

SINAMICS is the new family of drives from Siemens for industrial machines and plant construction. SINAMICS offers solutions for all drive tasks:

- Simple pump and fan applications in the process industry.
- Complex individual drives in centrifuges, presses, extruders, elevators, as well as conveyor and transport systems.
- Drive line-ups in textile, plastic film, and paper machines, as well as in rolling mill plants.
- Highly dynamic servo drives for machine tools, as well as packaging and printing machines.

Depending on the application, the SINAMICS range offers the ideal version for any drive task.

1.2 Versions

SINAMICS offers different versions designed to meet a range of requirements:

- SINAMICS G is designed for standard applications with induction motors. These applications have less stringent requirements regarding the dynamics and accuracy of the motor speed.
- SINAMICS S handles complex drive tasks with synchronous/induction motors and fulfills stringent requirements regarding
 - Dynamics and accuracy,
 - Integration of extensive technological functions in the drive control system

1.3 Platform concept and Totally Integrated Automation

All SINAMICS versions are based on a platform concept. Joint hardware and software components, as well as standardized tools for design, configuration, and commissioning tasks ensure high-level integration across all components. SINAMICS handles a wide variety of drive tasks with no system gaps. The different SINAMICS versions can be easily combined with each other.

SINAMICS is part of Siemens "Totally Integrated Automation". Integrated SINAMICS systems covering configuration, data storage, and communication at automation level ensure low-maintenance solutions with SIMATIC, SIMOTION, and SINUMERIK.

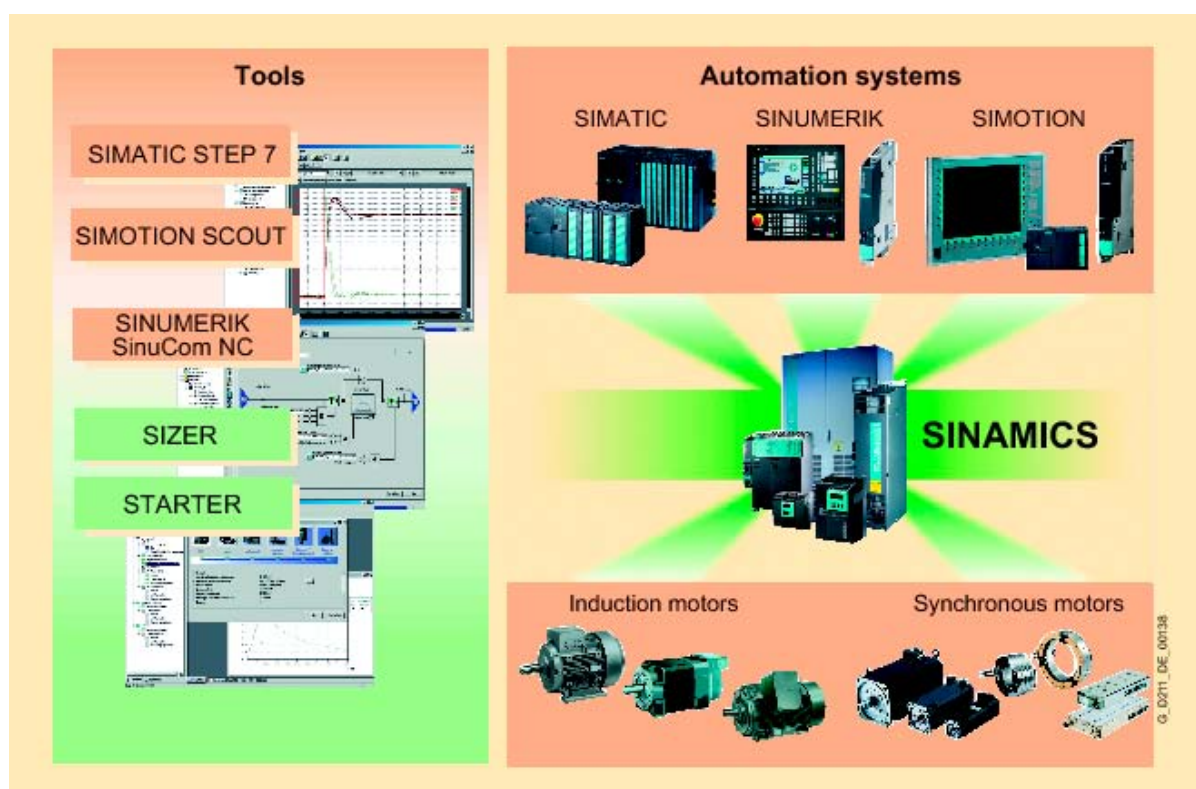

Figure 1-2 SINAMICS as part of the Siemens modular automation system

1.4 Overview, SINAMICS S120 AC Drive

SINAMICS S120 AC Drive is a modular drive system for individual axes and addresses sophisticated drive tasks for an extremely wide range of industrial applications.

Applications include:

- Machine concepts with a central drive (e.g. presses, printing, packaging)
- Modular machine concepts where the machine modules broken down to single axes
- Single-motor drives that when compared to standard drives have a high accuracy, stability and smooth running requirements in machinery and industrial plant construction
- Single-motor drives for transport applications (conveying, raising, lowering)
- Drives without regenerative feedback into the line supply (wire-drawing, extruding)
- Drive groups with high requirements placed on the availability (when the infeed fails, this may not cause all of the axes to fail)

The combination of a power unit (Power Module) and a Control Unit (CU) or a Control Unit Adapter form a single-motor drive in a compact design for machinery and plant construction.

SIZER, a high-performance engineering tool, makes it easier to choose and determine the optimum drive configuration. The drive can be simply commissioned a user-friendly fashion using the STARTER commissioning tool.

SINAMICS S120 AC Drive is supplemented by a wide range of motors. Whether synchronous or induction, whether rotary or linear motors, all motor types are supported by SINAMICS S120 AC Drive.

1.5 SINAMICS S120 components

This overview includes components from SINAMICS S120 AC Drive.

Figure 1-3 Component overview, SINAMICS S120 AC Drive

The following power components are available:

- Line-side power components, such as fuses, contactors, reactors and line filters for switching the power supply and complying with EMC regulations.
- Power Modules (either with or without integrated line filter) and an integrated braking chopper to provide power to the connected motor

To address the required functions, SINAMICS S120 AC Drive is equipped with:

- Control Units that provide the drive and technological functions.
- Supplementary system components that enhance functionality and offer different interfaces for encoders and process signals.

The SINAMICS S120 AC Drive components were developed for installation in cabinets.

They have the following features and characteristics:

- Easy to handle, simple installation and wiring
- Practical connection system, cable routing in accordance with EMC requirements
- Standard design

1.6 System data

Table 1-1 General technical specifications

Electrical data	
Line supply voltage Blocksize format units Chassis format units	1-ph. 200 V to 240 V AC ± 10 % 3-ph. 380 V to 480 V AC ± 10 % 3-ph. 380 V to 480 V AC ± 10 % Above 2000 m installation altitude, refer to the characteristic for voltage de-rating.
Rated pulse frequency Blocksize format units Chassis format units	4 kHz 2 kHz At higher pulse frequencies, the associated characteristic for current de-rating must be taken into account.
Line frequency	47 Hz to 63 Hz
Output voltage Blocksize format units Chassis format units	0 V to rated line supply voltage at 3-ph. 380 V up to 480 V AC units, 0 V to 0.78 of the line supply voltage for 1-ph. 200 V to 240 V AC units. 0 V to line supply voltage for 3-ph. 380 V to 480 V AC units.
Electronics power supply	24 V DC $-15/+20$ % ^{*)} , safety extra-low voltage DVC A (PELV)
Short-circuit current rating SCCR in accordance with UL508C (up to 600 V)	<ul style="list-style-type: none"> • 1.1 kW – 447 kW: 65 kA • 448 kW – 671 kW: 84 kA • 672 kW – 1193 kW: 170 kA • ≥ 1194 kW: 200 kA For chassis components, UL certification applies only in conjunction with the fuses prescribed by Siemens and not with other types or circuit breakers alone.
Radio interference suppression acc. to EN 61800-3	Category C3 (standard) Category C2 (option) for systems implemented in conformance with the documentation
Overvoltage category	III acc. to EN 60664-1
Degree of pollution	2 acc. to 60664-1

^{*)}If a motor holding brake is used, restricted voltage tolerances may have to be taken into account ($-2/+10$ %).

1.6 System data

Environmental conditions	
Note for the safety functions of Safety Integrated: The components must be protected against conductive pollution (e.g. by installing them in a cabinet with degree of protection IP54B acc. to EN 60529). Provided that conductive pollution can be prevented at the installation site, the degree of protection for the cabinet can be decreased accordingly.	
Degree of protection	IP20 or IPXXB to EN 60529, open type to UL 508
Protective class line supply circuits Protective class electronic circuits	I (with protective conductor connection) III (safety extra-low voltage DVC A /PELV) acc. to EN 61800-5-1
Type of cooling	Internal air cooling, power units with forced air cooling using an integrated fan
Permissible cooling medium temperature (air) and installation altitude in operation	0 °C to +40 °C and up to 1000 m installation altitude without derating, >40 °C up to +55 °C, refer to the characteristic for current derating. Installation altitude >1000 m up to 4000 m, refer to the characteristic for current derating or reduce the ambient temperature by 3.5 K per 500 m.

Line-side power components

2.1 Introduction

The line connection for a SINAMICS blocksize drive line-up comprises an optional line reactor and an optional line filter:

- Line supply voltages:
 - 1-ph. 200 V to 1-ph. 240 V AC +/- 10%.
 - 3-ph. 380 V to 3-ph. 480 V AC +/- 10%.
- Line reactor versions:
 - 3 versions for frame sizes FSA - FSC (chassis).
 - 5 versions for frame sizes FSD - FSF (3 chassis and 2 standalone).
- Line filter versions:
 - Integrated
 - External
 - chassis
 - standalone

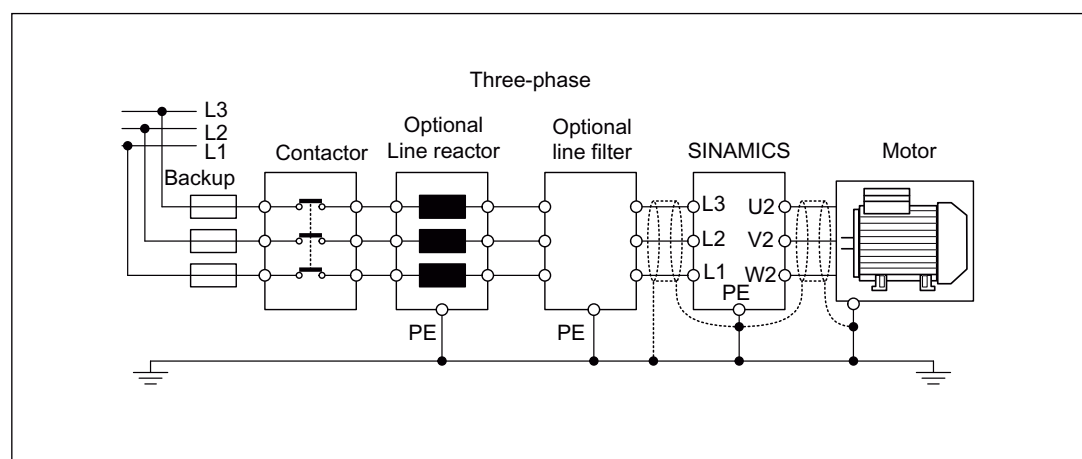

Figure 2-1 Example of a blocksize line connection

Figure 2-2 Example of a chassis line connection

Note

The limit values for the radio interference voltage are only complied with when a line reactor and a line filter, Category C2 acc. to EN 61800-3, are used.

CAUTION

The following can occur if line reactors/line filters are used, which have not been approved for SINAMICS by SIEMENS:

- the Power Modules could be damaged/destroyed.
- Line reactions can occur that can damage or interfere with other loads powered from the same network.

CAUTION

The Power Modules in blocksize format with line filters are only suitable for direct connection to TN line supplies.

2.2 Line connection variants

2.2.1 Methods of line connection

A distinction is made between:

- Direct operation of the line connection components on the supply
- Operation of the Line Connection Components via an Autotransformer
- Operation of the Line Connection Components via an Isolating Transformer

Figure 2-3 Overview of line connection variants

2.2.2 Operation of the Line Connection Components on the Supply Network

The SINAMICS S Blocksize drive system is designed to be directly connected to TN, TT line supply systems with grounded neutral conductor or grounded phase conductor as well as to IT line systems with rated voltages from 3-ph. 380 V to 480 V AC and 1-ph. 200 V to 240 V AC. Operation with line filter is only possible, without having to use additional measures, when connected to TN line supply systems with grounded neutral conductor.

Figure 2-4 Direct operation on the line supply

2.2.3 Operation of the Line Connection Components via an Autotransformer

An autotransformer can be used to adapt the voltage in the range up to 3-ph. 480 V AC +10 % or 1-ph. 240 V AC +10 %.

⚠ CAUTION

To ensure protective separation, an isolating transformer must be used for voltages greater than 3-ph. 480 V AC +10 % and 1-ph. 240 V AC +10 %.

Application example:

- The motor insulation must be protected from excessive voltages.

Figure 2-5 Autotransformer

2.2.4 Operation of the Line Connection Components via an Isolating Transformer

The isolating transformer converts the type of the line supply type in the plant (e.g. IT/TT line supply) to a TN line supply. Additional voltage adaptation to the permissible voltage tolerance range is possible.

An isolating transformer must be used in the following cases:

- The insulation of the Power Module and/or the motor is not adequate for the voltages that occur.
- There is no compatibility to an existing residual-current protective device.
- The installation altitude is greater than 2000 m above sea level.
- For all other systems that are not TN line supply systems with grounded neutral conductor, a line filter should always be used.

CAUTION
If the line supply voltage is greater than 3-ph. 480 V AC +10% or 1-ph. 240 V AC +10%, it is not permissible that an autotransformer is used.
In order to ensure protective separation, an isolating transformer must always be used.

Figure 2-6 Isolating transformer

2.3 Line filter

2.3.1 Description

In conjunction with line reactors and a consequential implementation of the plant/system configuration according to the EMC guidelines (Order No.: 6FC5297-□AD30-0AP□), line filters limit the cable-borne noise and disturbances emitted from Ppower Modules to permissible values for the industrial environment at the installation location.

Note

All PM340 Power Modules are available with and without an integrated line filter. Frame size FSA, 400 V, is an exception, as this always requires an external line filter.

2.3.2 Safety information

 **DANGER**

Line filters are suitable for direct connection to TN line supplies with grounded neutral conductor.

 **WARNING**

The cooling clearances of 100 mm above and below the components must be observed. This prevents thermal overload of the line filter.

 **WARNING**

The connections must not be interchanged:

- Incoming line cable to LINE/NETZ L1, L2, L3
- Outgoing cable to the line reactor to LOAD/LAST L1', L2', L3'

Non-observance may damage the line filter

 **CAUTION**

Using line filters not released by Siemens AG for SINAMICS can lead to line reactions that can damage or destroy other loads powered from the network.

2.4 Line reactors

2.4.1 Description

The line reactors limit lower-frequency harmonics that are fed back into the line supply. They are used to smooth voltage spikes (line supply faults) or to bridge voltage dips/interruptions when commutating. This is the reason that we recommend line reactors in conjunction with PM340 and Power Module Chassis.

2.4.2 Safety information

 **WARNING**

The cooling clearances of 100 mm above and below the components must be observed.

Note

The connecting cables to the Power Module must be as short as possible (max. 5 m). If possible, they should be shielded.

 **WARNING**

The connections must not be interchanged:

- Incoming line cable to 1U1, 1V1, 1W1, and
- Outgoing cable to the load 1U2, 1V2, 1W2.

CAUTION

When using line reactors that have not been approved by SIEMENS for SINAMICS, the following can occur:

- The Power Modules could be damaged/destroyed.
- Line harmonics that may interfere with or damage other loads connected to the same line supply.

 **CAUTION**

The surface temperature of the line reactors may exceed 80 °C.

Figure 2-16 Mounting: PM340 and line reactor, frame size FSB

2.4 Line reactors

Figure 2-17 Side mounting: Line reactors, frame sizes FSB and FSC

The line reactors for Power Modules, frame sizes FSA - FSE, are designed as sub-chassis components.

The line reactor is retained on the mounting surface and the Power Module is mounted on the line reactor in a space-saving fashion. The cables to the Power Modules are already connected at the line reactor.

The line reactor is connected to the line supply through terminals.

The reactors for Power Modules, frame sizes F, FX and GX are, as a result of their weight and their size, separately mounted.

Power Modules

3.1 Power Modules Blocksize (PM340)

3.1.1 Description

The Power Modules in blocksize format are designed as follows:

- Line side diode rectifier
- DC link electrolytic capacitors with pre-charging circuit
- Output inverter
- Braking chopper for (external) braking resistor
- Power supply 24 V DC / 1 A
- Gating unit, actual value sensing
- Fan to cool the power semiconductors

The Power Modules cover the power range from 0.12 kW to 90.0 kW and are available in versions with and without line filter.

3.1 Power Modules Blocksize (PM340)

Table 3-1 Overview, Power Modules PM340 (selection)

	
<p>Power Module (230 V) frame size FSA, with and without integrated line filter Power Module (400 V) frame size FSA, without integrated line filter</p>	<p>Power Module frame size FSB, with and without integrated line filter</p>
	
<p>Power Module frame size FSC, with and without integrated line filter</p>	<p>Power Module frame size FSD, without line filter</p>

3.1.2 Safety information

 **CAUTION**

During transport and during storage, Power Modules must be protected against mechanical shock and vibration. It is also important to protect the unit against water (rain) and against excessively high/excessively low temperatures.

Note

Connection authorization

Power Modules have been designed for use in the industrial environment and generate current harmonics on the line side as a result of the rectifier circuit.

When connecting a machine with integrated Power Modules to the public low-voltage line supply, authorization is required in advance from the local power supply company (utility company) if

- the rated input current of the motor ≤ 16 A per conductor, and
- the rated input current of the motor does not comply with the requirements specified in EN 61000-3-2 regarding current harmonics.

 **DANGER**

Grounding/protective grounding of the Power Module

The Power Module housing must always be grounded. If the Power Module is not correctly grounded, then extremely hazardous states can occur, which under certain circumstances, can result in death.

 **DANGER**

It must be checked as to whether the Power Module is designed for the correct power supply - higher supply voltages may not be connected to the Power Module.

 **DANGER**

After connecting the line and motor feeder cables to the appropriate terminals, check that the front covers (only frame sizes FSD to FSF) are closed and latched. Only then may the Power Module be connected to the power supply.

NOTICE

For a UL-approved system use UL-approved copper conductors only.

 **DANGER**

Once all the supply voltages have been disconnected, a hazardous voltage may be present in the power unit for up to 5 minutes. The cover for the terminals may only be opened after this time has definitely elapsed.

When opening the protective cover, you must activate the release. A suitable tool (e.g. screwdriver) must be used for this purpose.

Damaged components must not be used, otherwise this could result in secondary damage or accidents.

 **DANGER**

The hazard warning in the local language for the DC link discharge time must be affixed to the component. A set of labels in 16 languages is provided with the component.

 **DANGER**

The drive components generate high leakage currents in the protective conductor. The components must only be operated in cabinets or in closed electrical operating areas and must be connected with the protective conductor. To protect against electric shock, the protective conductor connection on the cabinet or machine must be implemented in accordance with one of the following measures:

- stationary connection and protective conductor connection by means of $\geq 10 \text{ mm}^2 \text{ Cu}$ or $\geq 16 \text{ mm}^2 \text{ Al}$
- stationary connection and installation of a second protective conductor with the same cross-section as the first protective conductor
- stationary connection and automatic shutdown of the power supply if the protective conductor is interrupted
- Connection with a plug connector for industrial applications in accordance with EN 60309 and a minimum protective conductor cross-section of $\geq 2.5 \text{ mm}^2 \text{ Cu}$ as part of a multi-core supply cable with appropriate strain relief.

 **WARNING**

Power Modules must be mounted in the vertical position.

For the Power Modules, the following cooling clearances must be maintained above and below the component:

- frame sizes FSA and FSB: 100 mm (3.93 inch),
- frame size FSC: 125 mm (4.92 inches),
- frame sizes FSD and FSE: 300 mm (11.81 inches) and
- frame size FSF: 350 mm (13.77 inches).

When mounting the Power Modules, the following clearances must be maintained between the components:

- frame size FSB: 40 mm (1.57 inch)
- frame size FSC: 50 mm (1.96 inch)

Devices, that could restrict the cooling air flow may not be mounted/installed in this area. It must be carefully ensured that the cooling air flow of the Power Modules can flow unrestricted.

Note

Power Modules of frame sizes FSA, FSD, FSE and FSF can be mounted without any lateral clearance.

 **DANGER**

Cable shields and unused power cable conductors (e.g. brake conductors) must be connected to PE potential to prevent capacitive cross-talk charges.

Non-observance can cause lethal shock voltages.

3.1.3 Interface description

3.1 Power Modules Blocksize (PM340)

The dimensions and the tightening torques when retaining the Power Modules are specified in the following table.

Table 3-7 PM340, dimensions and tightening torques when mounting

Frame size	Height, width, depth		Dimensions (with Control Unit)	Retaining type	Tightening torques
FSA	HxWxD	mm	173 x 73 x 145	2 x M4 studs, 2 x M4 nuts, 2 x M4 washers	2.5 Nm with washers
		Inches	6.81 x 2.87 x 5.71		
FSB	HxWxD	mm	270 x 153 x 165	4 x M4 studs, 4 x M4 nuts, 4 x M4 washers	
		Inches	10.63 x 6.02 x 6.50		
FSC	HxWxD	mm	334 x 189 x 185	4 x M5 studs, 4 x M5 nuts, 4 x M5 washers	
		Inches	13.1 x 7.41 x 7.28		
FSD without line filter	HxWxD	mm	419 x 275 x 204	4 x M6 studs, 4 x M6nuts, 4 x M6 washers	
		Inches	16.3 x 10.8 x 8.0		
FSD with integrated line filter	HxWxD	mm	512 x 275 x 204		
		Inches	20.1 x 10.8 x 8.0		
FSE without line filter	HxWxD	mm	499 x 275 x 204		
		Inches	19.6 x 10.8 x 8.0		
FSE with integrated line filter	HxWxD	mm	635 x 275 x 204		
		Inches	25 x 10.8 x 8.0		
FSF without line filter	HxWxD	mm	635 x 350 x 316		4 x M8 studs, 4 x M8 nuts, 4 x M8 washers
		Inches	25.0 x 13.8 x 12.4		
FSF with integrated line filter	HxWxD	mm	934 x 350 x 316		
		Inches	36.8 x 13.8 x 12.4		

Table 3-8 PM340, load terminals - tightening torques

Frame size	Tightening torques	
FSA	Nm	1,1
FSB	Nm	1,5
FSC	Nm	2,25
FSD	Nm	6
FSE	Nm	6
FSF	Nm	13

For frame sizes FSD to FSF, the terminals are accessed by releasing the tongue at the side of the terminal covers using a suitable flat screwdriver. The cover can then be pushed upwards and engaged in this position as shown in the following diagram.

Figure 3-18 Access to the line and motor terminals for frame sizes FSD to FSF

Once the terminal cover has been removed, the degree of protection of the Power Module is reduced to IP00.

Operation on non-grounded line supply systems (IT)

It is not permissible to use Power Modules with integrated line filter in IT line supply systems.

1) The input current depends on the motor load and line impedance. The input currents apply for load with the rated power (based on I_n) for a line impedance corresponding to $u_k = 1\%$.

2) Max. motor cable length 15 m (shielded) for Power Modules PM340 with integrated line filter to maintain the limit values of EN 61800-3 Category C2.

3.2 Power Modules Blocksize Liquid Cooled (PM340)

3.2.1 Description

The Power Modules in Blocksize Liquid Cooled format (frame sizes FSD - FSF) are designed as follows:

- Line-side diode rectifier
- DC link electrolytic capacitors with pre-charging circuit
- Output inverter
- Braking chopper for (external) braking resistor
- 24 V DC / 1 A power supply
- Gating unit, actual value acquisition
- Internal liquid cooling

The Blocksize Liquid Cooled Power Modules cover the power range from 18.5 kW to 90.0 kW and are also without an integrated line filter.

Table 3-15 Overview of Liquid Cooled Power Modules PM340

	
<p>Power Module frame size FSD Liquid Cooled</p>	<p>Power Module frame size FSE Liquid Cooled</p>
	
<p>Power Module frame size FSF Liquid Cooled</p>	

3.2.2 Safety information

 **CAUTION**

During transport and during storage, Power Modules must be protected against mechanical shock and vibration. It is also important to protect the unit against water (rain) and against excessively high/excessively low temperatures.

Note

Connection authorization

Power Modules have been designed for use in the industrial environment and generate current harmonics on the line side as a result of the rectifier circuit.

When a machine with integrated Power Modules is connected to the public network, authorization is required from the local power supply company if the rated input current of the machine does not fulfill the requirements of EN 61000-3-2 with respect to current harmonics.

 **DANGER**

Grounding/protective grounding of the Power Module

The Power Module housing must always be grounded. If the Power Module is not correctly grounded, then extremely hazardous states can occur, which under certain circumstances, can result in death.

 **DANGER**

It must be checked as to whether the Power Module is designed for the correct power supply - higher supply voltages may not be connected to the Power Module.

 **DANGER**

After connecting the line and motor feeder cables to the appropriate terminals, check that the front covers (only frame sizes FSD to FSF) are closed and latched. Only then may the Power Module be connected to the power supply.

NOTICE

For UL-approved systems, only MOTION-CONNECT lines can be used and the fuses tested for UL approval must be installed (see "Technical specifications").

 **DANGER**

Once all the supply voltages have been disconnected, a hazardous voltage may be present in the power unit for up to 5 minutes. The cover for the terminals may only be opened after this time has definitely elapsed.

When opening the protective cover, you must activate the release. A suitable tool (e.g. screwdriver) must be used for this purpose.

Damaged components must not be used, otherwise this could result in secondary damage or accidents.

 **DANGER**

The drive components generate high leakage currents in the protective conductor. The components must only be operated in cabinets or in closed electrical operating areas and must be connected with the protective conductor. To protect against electric shock, the protective conductor connection on the cabinet or machine must be implemented in accordance with one of the following measures:

- stationary connection and protective conductor connection by means of $\geq 10 \text{ mm}^2$ Cu or $\geq 16 \text{ mm}^2$ Al
- stationary connection and installation of a second protective conductor with the same cross-section as the first protective conductor
- stationary connection and automatic shutdown of the power supply if the protective conductor is interrupted
- Connection with a plug connector for industrial applications in accordance with EN 60309 and a minimum protective conductor cross-section of $\geq 2.5 \text{ mm}^2$ Cu as part of a multi-core supply cable with appropriate strain relief.

 **DANGER**

The hazard warning in the local language for the DC link discharge time must be affixed to the component. A set of labels in 16 languages is provided with the component.

 **WARNING**

Power Modules must be mounted in the vertical position.

For the Liquid Cooled Power Modules, a cooling clearance of 100 mm (3.93 inches) must be maintained above and below the component.

Devices, that could restrict the cooling air flow may not be mounted/installed in this area. It must be carefully ensured that the cooling air flow of the Power Modules can flow unrestricted.

Note

The Power Modules with frame sizes FSD, FSE, and FSF can be mounted without any lateral clearance.

 **DANGER**

Cable shields and unused power cable conductors (e.g. brake conductors) must be connected to PE potential to prevent capacitive cross-talk charges.

Non-observance can cause lethal shock voltages.

 **WARNING**

The equipment must be safely disconnected from the supply before any installation or service work is carried out on cooling circuit components.

The cooling circuit may only be connected by a trained specialist.

3.2.3 Interface description

3.2.3.1 Overview

Figure 3-30 Liquid Cooled Power Module PM340 (Example: Frame size FSD)

Figure 3-31 Connection example Power Module PM340 Liquid Cooled, 3 AC 380 V to 480 V

Arrangement of the line and motor terminals

The following diagram shows the arrangement of the line and motor terminals for PM340 Power Modules (frame sizes FSD to FSF). The diagram also includes the terminal tightening torques.

Figure 3-32 Arrangement of the line supply and motor terminals for the PM340

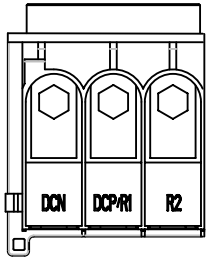

3.2.3.2 Line supply connection

Table 3-16 Terminal strip, line supply connection 3-ph. 380 V - 480 V AC

	Terminal	Signal name	Technical specifications
	1	U1/L1	External conductor L1
	2	V1/L2	External conductor L2
	3	W1/L3	External conductor L3
	4	PE	PE connection

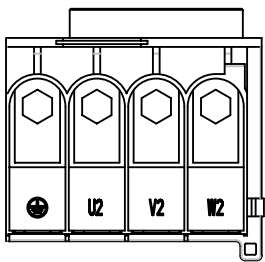

3.2.3.3 Braking resistor and DC link connection

Table 3-17 Terminal strip, braking resistor, and DC link connection

	Terminal	Technical specifications
	DCN	DC link negative
	DCP/R1	DC link positive and positive connection for braking resistor
	R2	Negative connection for the braking resistor

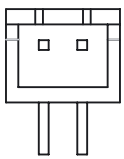

3.2.3.4 Motor connection

Table 3-18 Terminal strip, motor connection 380 V - 480 V 3 AC

	Terminal	Technical specifications
		PE connection
	U2	Motor phase U
	V2	Motor phase V
	W2	Motor phase W

3.2.3.5 Connection to the option module, brake control

Table 3-19 Connector

	Terminal	Designation	Technical specifications
	1	Low	Low signal, option module brake control at PM340
	2	High	High signal, option module brake control at PM340

3.2.4 Dimension drawings

Figure 3-33 Dimension drawing: Power Module PM340, frame size FSD Liquid Cooled

3.2 Power Modules Blocksize Liquid Cooled (PM340)

Figure 3-34 Dimension drawing: Power Module PM340, frame size FSE Liquid Cooled

Figure 3-35 Dimension drawing: Power Module PM340, frame size FSF Liquid Cooled

3.2.5 Installation

The coolant hoses should be connected before the devices are installed.

Hole drilling templates for frame sizes FSD to FSF

Figure 3-36 Hole drilling templates for frame sizes FSD to FSF

Figure 3-37 Installation of Power Module PM340 Liquid Cooled with integrated cooling unit (example: frame size FSE)

The connections for the coolant are on the underside.
Water connection thread type: Pipe thread ISO 228 G ½ B.

For frame sizes FSD to FSF, the terminals are accessed by releasing the tongue at the side of the terminal covers using a suitable flat screwdriver. The cover can then be pushed upwards and engaged in this position as shown in the following diagram.

Figure 3-38 Access to the line and motor terminals for frame sizes FSD to FSF

Once the terminal cover has been removed, the degree of protection of the Power Module is reduced to IP00.

3.2.6 Electrical connection

When connecting the SINAMICS S120 Liquid Cooled devices, you should use cables with the cross-sections specified in the relevant technical specifications.

The coolant connection is established by means of 1/2" coupling. The supply and return connections on SINAMICS devices must be established by means of a flexible, non-conductive hose to prevent electrochemical corrosion, reduce the transmission of vibrations, and dampen pressure transients in the coolant. The hose should be about 1.5 m in length (total of supply and return lines).

3.2.7 Commissioning

Prior to commissioning

Once the devices have been installed and before they are commissioned, the cooling circuit must be checked for leaks.

After commissioning

The recommended servicing procedure for the cooling circuit is to check the fill level and the coolant for discoloration or cloudiness at least once a year.

If the coolant level has dropped, the loss should be corrected on closed or semi-open circuits with a prepared mixture of distilled water and inhibitor or Antifrogen N.

3.2.8 Technical specifications

3.3 Power Modules Chassis

3.3.1 Description

A Power Module is a power unit (frequency inverter) that provides the power supply for the connected motor. A Power Module must be connected to a Control Unit via DRIVE-CLiQ. The open-loop and closed-loop control functions are stored in the Control Unit.

Characteristics of Power Modules

- Version from 210 A to 490 A
- Internal air cooling
- Short-circuit/ground-fault-proof
- Electronic type plate
- Operating status and error status displayed using LEDs
- DRIVE-CLiQ interface for communication with the Control Unit and/or other components in the drive line-up
- Integration in system diagnostics

3.3.2 Safety information

 DANGER
After disconnecting all the supply voltages, a hazardous voltage will be present at all Power Modules for another 5 minutes. Work cannot be carried out until this time has elapsed.

 DANGER
The DC link discharge voltage hazard warning in the local language must be attached to all of the components.

 WARNING
The cooling clearances above, below, and in front of the component, which are specified in the dimension drawings, must be observed.

 DANGER
Cable shields and unused power cable conductors must be connected to PE potential to prevent capacitive cross-talk charges. Non-observance can cause lethal shock voltages.

3.3.3 Interface description

3.3.3.7 Meaning of the LEDs on the Power Module

Table 3-26 Single Motor Module / Double Motor Module / Power Module - description of the LEDs

Status		Description, cause	Remedy
Ready (H200)	DC link (H201)		
OFF	OFF	Electronics power supply is missing or outside permissible tolerance range.	–
Green	OFF	The component is ready for operation and cyclic DRIVE-CLiQ communication is taking place.	–
	Orange	The component is ready for operation and cyclic DRIVE-CLiQ communication is taking place. The DC link voltage is present.	–
	Red	The component is ready for operation and cyclic DRIVE-CLiQ communication is taking place. The DC link voltage is too high.	Check supply voltage
Orange	Orange	DRIVE-CLiQ communication is being established.	–
Red	–	At least one fault is present in this component. Note: The LED is activated regardless of whether the corresponding messages have been reconfigured.	Remedy and acknowledge fault
Green/red (0.5 Hz)	–	Firmware is being downloaded.	–
Green/red (2 Hz)	–	Firmware download is complete. Wait for POWER ON.	Carry out a POWER ON
Green/orange or Red/orange	–	Component detection via LED is activated (p0124). Note: Both options depend on the LED status when component recognition is activated via p0124 = 1.	–

 DANGER
Hazardous DC link voltages may be present at any time regardless of the status of the "DC link" LED. The warning information on the components must be carefully observed!

3.3.4 Dimension drawings

Dimension drawing frame size FX

The cooling clearances to be maintained are indicated by the dotted line.

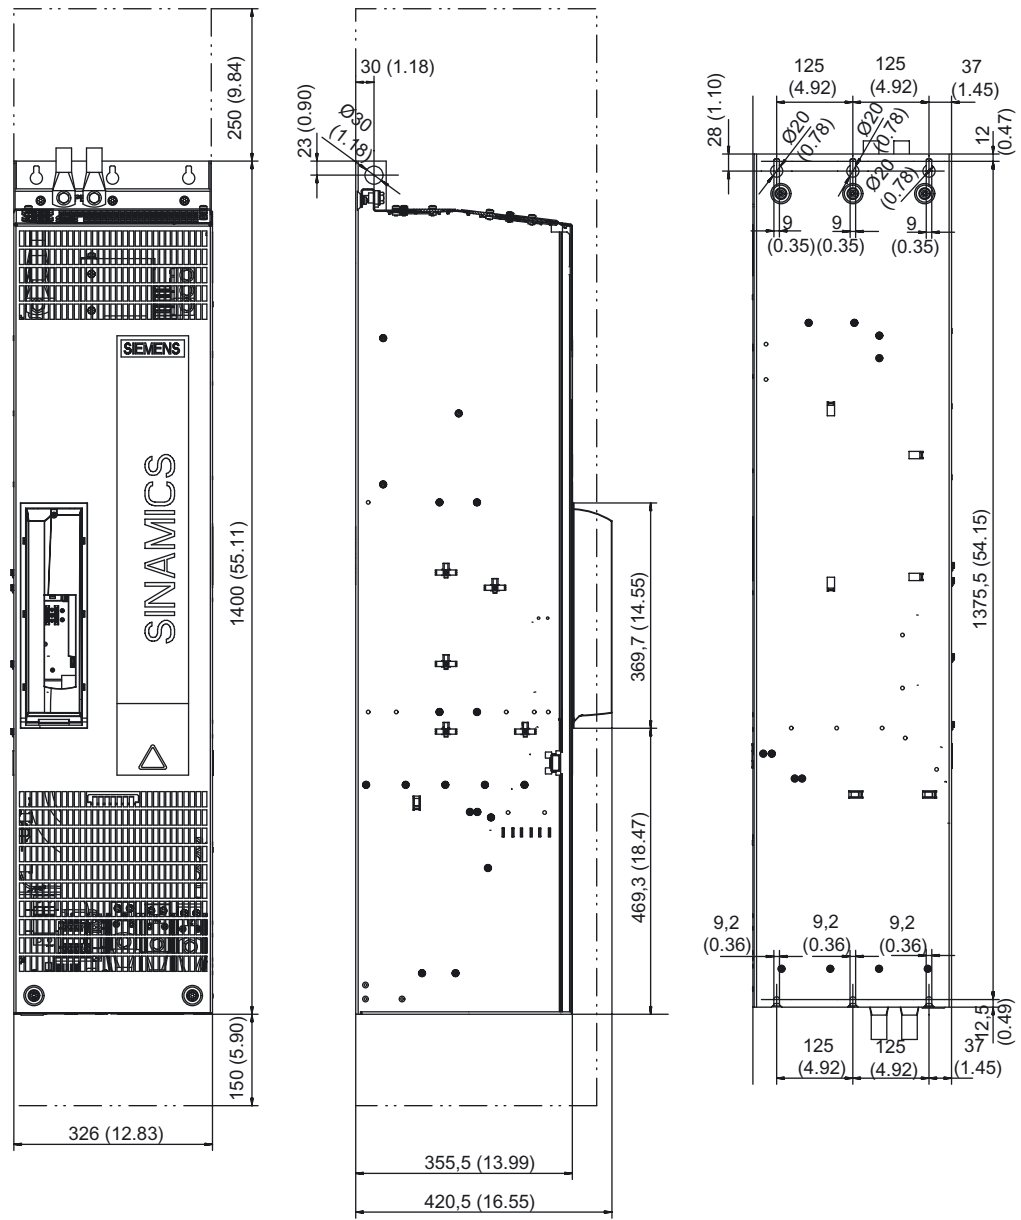

Figure 3-53 Dimension drawing Power Module, frame size FX

Dimension drawing frame size GX

The cooling clearances to be maintained are indicated by the dotted line.

Figure 3-54 Dimension drawing Power Module, frame size GX

3.3.5 Mounting the CU310 in the Power Module Chassis

Figure 3-55 Mounting the CU310 in the Power Module chassis format, frame size FX

The DRIVE-CLiQ cable and the cable for the 24 V supply must be correctly routed so that the front flap can close.

Note

For the Power Module, a connecting cable is also supplied for the power supply of the CU310. Customers must connect-up this cable.

This means that the CU310 no longer has to be supplied from an external 24 V DC.

3.3.6 Electrical connection

Adjusting the fan voltage (-T10)

The power supply for the device fans (1-ph. 230 V AC) in the Power Module (-T10) is taken from the line supply using transformers. The locations of the transformers are indicated in the interface descriptions.

The transformers are fitted with primary taps so that they can be fine-tuned to the line supply voltage. When delivered, the taps are always set to the highest level. With a low supply voltage, the appropriate transformer tap must be activated.

The connections at the setting terminals must be connected to "0" and the line supply voltage.

Figure 3-56 Setting terminals for the fan transformers

The supply voltage assignments for making the appropriate setting on the fan transformer are indicated in the following table (factory presetting): 480 V/0 V

CAUTION	
If the terminals are not changed-over to reflect the actual line supply voltage:	
<ul style="list-style-type: none"> • The required cooling level will not provided (risk of overheating) • The fan fuses may blow (overload) 	

Table 3-27 Assignment of the existing line supply voltage for setting at the fan transformer

Line supply voltage	Tap at the fan transformer (-T10)
380 V ± 10 %	380 V
400 V ± 10 %	400 V
440 V ± 10 %	440 V
480 V ± 10 %	480 V

3.3.7.1 Characteristics

Overload capability

The Power Modules are equipped with an overload reserve e.g. to handle breakaway torques.

In drives with overload requirements, the appropriate base load current must, therefore, be used as a basis for the required load.

The criterion for overload is that the drive is operated with its base load current before and after the overload occurs (a load duration of 300 s is used as a basis here).

Low overload

The base load current for low overload I_L is based on a load duty cycle of 110% for 60 s or 150% for 10 s with a load duty duration of 300 s.

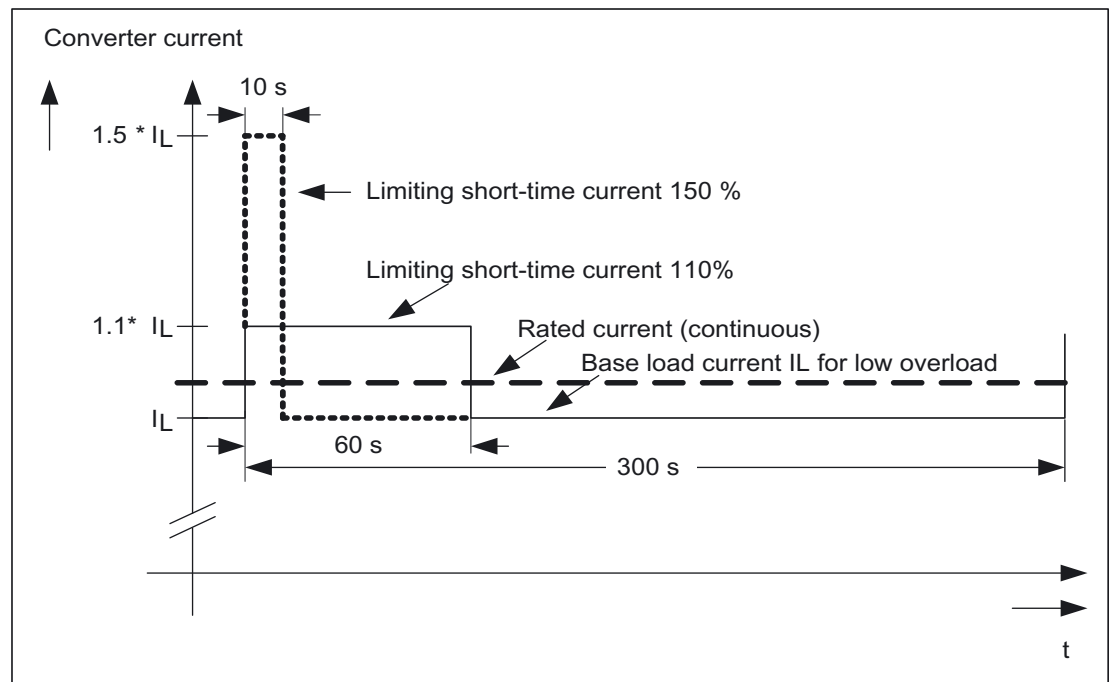

Figure 3-57 Low overload

High overload

The base load current for high overload I_H is based on a load duty cycle of 150% for 60 s or 160% for 10 s with a load duty duration of 300 s.

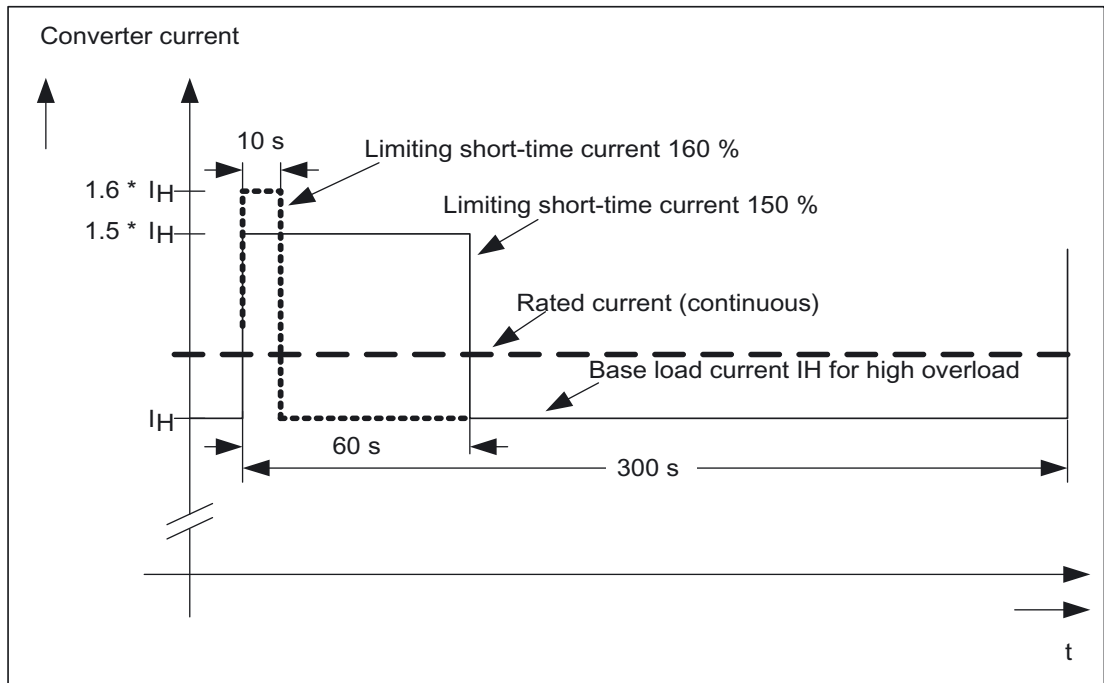

Figure 3-58 High overload

3.3.7.2 Current de-rating as a function of the pulse frequency

When the pulse frequency is increased, the derating factor of the output current must be taken into account.

This derating factor must be applied to the currents specified in the technical data.

Table 3-29 Derating factor of the output current as a function of the pulse frequency

Order No. 6SL3310-...	Output current for a pulse frequency of 2 kHz [A]	Permissible output current for a pulse frequency of 2.5 kHz as a % of I_n	Derating factor for a pulse frequency of 4 kHz	Derating factor for a pulse frequency of 8 kHz
1TE32-1AA0	210	95 %	82 %	50 %
1TE32-6AA0	260	95 %	83 %	50 %
1TE33-1AA0	310	97 %	88 %	50 %
1TE33-8AA0	380	96 %	87 %	50 %
1TE35-0AA0	490	94 %	78 %	50 %

Maximum output frequencies achieved by increasing the pulse frequency

By multiplying the rated pulse frequency with a multiple integer, the following output frequencies can be achieved taking into account the derating factors:

Table 3-30 Maximum output frequencies achieved by increasing the pulse frequency

Pulse frequency [kHz]	Maximum output frequency [Hz]
2	160
4	320 ¹
8	640 ¹

¹ Due to the closed-loop control, the maximum output frequency is limited to 300 Hz.

Figure 3-59 Current correction factor as a function of ambient temperature

Note: A factor $k_T > 1.0$ is only to be taken into account in conjunction with the current derating factor depending on the installation altitude.

DC link components

4.1 Blocksize

4.1.1 Braking resistors

4.1.1.1 Description

The PM340 Power Modules cannot regenerate into the line supply. For regenerative operation, e.g. the braking of a rotating mass, a braking resistor must be connected to convert the resulting energy into heat.

A temperature protection switch monitors the braking resistor for overtemperature and issues a signal on a floating contact if the limit value is exceeded.

4.1.1.2 Safety information

The surface temperature of the braking resistors may exceed 80 °C.

Protecting the resistance

The power supply to the Power Modules must be established through a contactor which can then shut down the power supply when the resistor overheats.

A temperature protection switch handles the protective function (this is supplied with each break resistor). This is connected in series with the coil feeder cable for the main contactor.

The contacts of the temperature protection switch close again as soon as the resistor temperature has fallen below the selected value.

4.1.1.4 Mounting

The braking resistor is connected at terminals DCP/R1 and R2.

The braking resistors can be installed at the side next to the PM340 Power Modules. The braking resistors for the FSA and FSB frame sizes are designed as sub-chassis components. If the PM340 Power Modules of the FSA or FSB frame size are operated without line reactor, the braking resistors can also be installed under the Power Modules.

The braking resistors can be installed horizontally or vertically. The connections on vertically installed resistors must be at the bottom.

The braking resistors for the Power Modules of the FSC to FSF frame sizes should be placed outside the control cabinet or the switchgear room in order to direct the resulting heat loss away from the Power Modules. This reduces the level of air conditioning required.

4.2 Chassis

4.2.1 Braking Modules

4.2.1.1 Description

A Braking Module (and an external braking resistor) is required in certain cases when the drive is to be braked or brought to a standstill (e.g. EMERGENCY SWITCHING-OFF Category 1). The Braking Module contains the power electronics and the associated control. The supply voltage for the electronics is taken from the DC link.

During operation, the DC link energy is converted to heat loss in an external braking resistor.

A mounting slot is provided in the Power Module.

Design

The Braking Module in chassis format is installed in a slot within the Power Module and force-cooled by its fan. The Braking Module is connected to the DC link by means of flexible cables, which are supplied as standard.

The Braking Module has as standard, the following interfaces:

- The DC link is connected through flexible cables
- Connecting terminal for external braking resistor
- 1 digital input (inhibit Braking Module with high signal/acknowledge error with negative edge high low)
- 1 digital output (Braking Module defective)

4.2.1.2 Safety information

 DANGER

After disconnecting all the supply voltages, a hazardous voltage will be present in all components for another 5 minutes. Work may not be carried out on the components until after this time has elapsed.

Before starting work, you should also measure the voltage after the 5 minutes have elapsed! The voltage can be measured on DC link terminals DCP and DCN.

 DANGER

The DC link discharge voltage hazard warning in the local language must be attached to all of the components.

 DANGER

The connection to the braking resistors must be short-circuit/ground-fault proof.

 WARNING

If braking resistors are used that have not been released by SIEMENS for SINAMICS, then the braking resistors could be destroyed.

	Terminal	Designation ¹⁾	Technical specifications
	1	Shield	Shield connection for terminal 2 ... 6
	2	0 V	Low signal level: -3 V to 5 V
	3	DI inhibit input	High signal level: +15 V to 30 V Current drain: 2 mA to 15 mA
	4	0 V	Voltage: 24 V DC Load current: 0.5 mA to 0.6 mA
	5	DO fault output	
	6	+24 V	Voltage: +18 V to 30 V Typical current consumption (own current consumption): 10 mA at 24 V DC

Max. connectable cross-section 1.5 mm²

¹⁾ DI: Digital input; DO: Digital output

Note

Applying a high signal to terminal X21.3 inhibits the Braking Module. On a falling edge, pending error signals are acknowledged.

4.2.1.8 S1 Threshold switch

The response threshold at which the Braking Module is activated and the DC link voltage generated during braking are specified in the following table.

 WARNING
The threshold switch must only be used when the Power Module is switched off and the DC link capacitors are discharged.

Table 4-7 Response thresholds of the Braking Modules

Response threshold	Switch position	Comment
673 V	1	774 V is the default factory setting. For line supply voltages of between 3-ph. 380 V and 400 V AC, the response threshold can be set to 673 V to reduce the voltage stress on the motor and Power Module. This does, however, reduce the possible braking power with the square of the voltage $(677/774)^2 = 0.75$. The maximum possible braking power is, therefore, 75%.
774 V	2	

4.2.1.9 Installing a Braking Module in a Power Module, frame size FX

Figure 4-8 Installing a Braking Module in a Power Module, frame size FX – steps 1 - 3

Figure 4-9 Installing a Braking Module in a Power Module, frame size FX – steps 4 - 6

Installing the Braking Module

The steps for the installation procedure are numbered in accordance with the diagrams in front of them.

1. Unscrew the 2 M6 screws from the front cover and lift off the cover.
2. Unscrew the 2 screws from the upper cover plate.
Unscrew the 1 M6 nut on the left-hand side.
Remove the left-hand cover.
3. Unscrew the 4 screws from the upper cover plate.
Unscrew the 3 screws from the rear cut-out sections.
Remove the top cover.
4. Unscrew the 3 screws for the blanking plate.
Remove the plate.
5. Insert the Braking Module where the cover used to be and secure it using the 3 screws (step 4).
6. Secure the connection cable to the DC link with 2 screws (Braking Module connection) and 2 nuts (DC link connection).

Carry out the subsequent steps in reverse order from steps 1 – 3.

An opening above the connections for the braking resistor (R1, R2) is provided in the cover for connecting the cable to the braking resistor.

Note

You must observe the specified tightening torques.

4.2.1.10 Installing a Braking Module in a Power Module, frame size GX

Figure 4-10 Installing a Braking Module in a Power Module, frame size GX – steps 1 - 3

Weight	3.6 kg	7.3 kg

4.2.2 Braking resistors

4.2.2.1 Description

The braking resistor is used to reduce the excess DC link energy in regenerative operation.

The braking resistor is connected to the Braking Module. The braking resistor is mounted outside the cabinet or switchgear room. This means that the resulting heat loss around the Power Module can be dissipated - and cooling costs/equipment reduced.

Resistors with rated powers of 25 kW and 50 kW are available.

Braking resistors can be used on Power Modules with a voltage range. This is the reason that the voltage can be changed by setting the response thresholds at the Braking Module to reduce the voltage stress on the motor and Power Module.

A temperature protection switch monitors the braking resistor for overtemperature and issues a signal on a floating contact if the limit value is exceeded.

4.2.2.2 Safety information

 **WARNING**

A cooling clearance of 200 mm must be maintained on all sides of the component (with ventilation meshes).

 **DANGER**

The braking resistor cables must be laid in such a way that they are short-circuit and ground-fault proof.

 **CAUTION**

The connecting cables to the Braking Module in the Power Module must be kept as short as possible (max. 100 mm).

 **DANGER**

The braking resistors are only suitable for base mounting.

Sufficient space must be available for dissipating the energy converted by the braking resistor.

A sufficient distance from flammable objects must be maintained.

The braking resistor must be vertically installed as a free-standing unit.

Objects must not be placed on or anywhere above the braking resistor.

The braking resistor should not be installed underneath fire detection systems, since these could be triggered by the resulting heat.

For outdoor installation, a hood should be provided to protect the braking resistor against precipitation (in accordance with degree of protection IP20).

The surface temperature of the braking resistors may exceed 80 °C.

4.2.2.3 Dimension drawing

Figure 4-12 Dimension drawing, 25 kW/125 kW resistor

Figure 4-13 Dimension drawing, 50 kW/250 kW resistor

4.2.2.4 Electrical connection

 WARNING
The Braking Module must only be connected when the Power Module has been disconnected from the power supply and the DC link capacitors have been discharged.

CAUTION
The braking resistor cables must be laid in such a way that they are short-circuit and ground-fault proof. The length of the connecting cables between the Braking Module and external braking resistor must not exceed 100 m.

Recommended cable cross-sections:

- For 25 kW: 50 mm²
- For 50 kW: 70 mm²

Thermostatic switch

A thermostatic switch is installed to protect the braking resistor against overload. Its floating contacts must be integrated in the fault chain on the line side.

Table 4-9 Thermostatic switch connection

Terminal	Function
T1	Thermostatic switch connection

Duty cycle

Figure 4-14 Duty cycle for braking resistors

Motor-side power components

5.1 Motor reactors

5.1.1 Blocksize

5.1.1.1 Description

Motor reactors reduce the voltage stress on the motor windings by reducing the voltage gradients at the motor terminals that occur when motors are fed from drive converters. At the same time, the capacitive re-charging currents that additionally load the output of the Power Module when longer motor cables are used are simultaneously reduced.

The motor reactors for Power Modules 3-ph. 380 V to 480 V AC are suitable for a pulse frequency of 4 kHz. Higher pulse frequencies are not permissible.

5.1.1.2 Safety information

 WARNING
--

The 100 mm clearances above and below the components must be observed.
--

Note

The connecting cables to the Power Module must be kept as short as possible (max. 5 m).

CAUTION

When using motor reactors that SIEMENS has not approved for SINAMICS, then these can thermally damage the reactor.
--

 CAUTION
--

The surface temperature of the motor reactors can exceed 80 °C.

CAUTION

The maximum permissible output frequency when motor reactors are used is 150 Hz.

5.1.2 Chassis

5.1.2.1 Description

Motor reactors reduce the voltage stress on the motor windings by reducing the voltage gradients at the motor terminals that occur when motors are fed from drive converters. At the same time, the capacitive re-charging currents that additionally load the output of the Power Module when longer motor cables are used are simultaneously reduced.

5.1.2.2 Safety information

 WARNING
--

The 100 mm clearances above and below the components must be observed.
--

Note

The connecting cables to the Power Module must be kept as short as possible (max. 5 m).

CAUTION

When using motor reactors that SIEMENS has not approved for SINAMICS, then these can thermally damage the reactor.
--

 CAUTION
--

The surface temperature of the motor reactors can exceed 80 °C.

CAUTION

The maximum permissible output frequency when motor reactors are used is 150 Hz.
--

5.2 Sinusoidal filter

5.2.1 Chassis

5.2.1.1 Description

The sinusoidal filter at the output of the Power Module supplies voltages that are virtually sinusoidal at the motor, thereby enabling standard motors to be used without shielded cables and without the need to reduce the power. Non-shielded cables can be used and, if long motor supply cables are used, no additional motor reactors are required.

Sinusoidal filters with a power rating of up to 200 kW are available

The pulse frequency of the Power Modules must be set to 4 kHz for the sine-wave filters. This reduces the output current of the Power Module, refer to Chapter Technical specifications.

When a sinusoidal filter is used, the available output voltage decreases by 15 %.

5.2.1.2 Safety information

 WARNING
--

The 100 mm clearances above and below the components must be observed.
--

Note

The connecting cables to the Power Module must be kept as short as possible (max. 5 m).

CAUTION

Using sinusoidal filters that have not been approved by SIEMENS for SINAMICS can:

- | |
|---|
| <ul style="list-style-type: none"> • damage/destroy the Power Modules • cause line harmonics that may interfere with or damage other loads connected to the same line supply. |
|---|

 CAUTION
--

The sinusoidal filters can have surface temperatures of over 80 °C.

5.3 dv/dt filter

5.3.1 Chassis

5.3.1.1 Description

The dv/dt filter with Voltage Peak Limiter consists of two components: the dv/dt reactor and the voltage limiting network (Voltage Peak Limiter), which limits voltage peaks and returns the energy to the DC link.

The dv/dt filters with Voltage Peak Limiter must be used for motors for which the voltage strength of the insulation system is unknown or insufficient. Standard motors of the 1LA5, 1LA6 and 1LA8 series only require them at supply voltages > 500 V +10%.

The dv/dt filter with Voltage Peak Limiter limits the voltage gradient to values < 500 V/μs and the typical transients with rated line voltages to the values below (with motor cable lengths of < 150 m):

< 1000 V at $V_{line} < 575$ V.

Components

The Order Nos. of the individual components (dv/dt reactor and voltage limiting network) are listed in the following table:

Table 5-18 dv/dt filter with Voltage Peak Limiter, Order Nos. of the individual components

dv/dt filter plus Voltage Peak Limiter	dv/dt reactor	Voltage limiting network
6SL3000-2DE32-6AA0	6SL3000-2DE32-6CA0	6SL3000-2DE32-6BA0
6SL3000-2DE35-0AA0	6SL3000-2DE35-0CA0	6SL3000-2DE35-0BA0

5.3.1.2 Safety information

⚠ WARNING

The 100 mm clearances above and below the components must be observed.

Note

The connecting cables to the Power Module must be kept as short as possible (max. 5 m).

CAUTION

It is not permissible that the connections are interchanged:

- dv/dt reactor
 - Incoming cable from the Power Modules to 1U1, 1V1, 1W1, and
 - Outgoing cable to the load 1U2, 1V2, 1W2.
- Voltage Peak Limiter (VPL)
 - Cable from the DC link of the Power Module at DCPS, DCNS and
 - Cable to the dv/dt reactor 1U2, 1V2, 1W2.

If this is not observed, then there is a danger of damage to the dv/dt reactor and the voltage limiting network.

CAUTION

When using dv/dt filters that SIEMENS has not approved for SINAMICS, then these dv/dt filters can be thermally damaged.

⚠ CAUTION

The surface temperature of the dv/dt reactors may exceed 80 °C.

CAUTION

The maximum permissible output frequency when using dv/dt filters is 150 Hz.

Control Units

6.1 Introduction

Description

SINAMICS S120 AC Drive Control Units are designed for use with blocksize format or chassis format Power Modules.

Advantages

1. The **CU310 DP Control Unit** provides the PROFIBUS external communications interface and a TTL/HTL/SSI encoder evaluation circuit.
2. The **CU310 PN Control Unit** provides two PROFINET interfaces and a TTL/HTL/SSI encoder evaluation circuit.
3. Power Modules can also be connected to the multi-axis **Control Unit Adapter CUA31** using the adapter module. The combination of a modular power unit and a Control Unit Adapter CUA31 is used to extend an existing DC/AC drive line-up with Control Unit by one axis.
4. Power Modules can also be connected to the multi-axis Control Unit via the **CUA32 Control Unit Adapter**. The combination of a modular power unit and a CUA32 Control Unit Adapter is used to extend an existing DC/AC drive line-up with Control Unit by one axis and also provides a TTL/HTL/SSI encoder evaluation circuit.

Note

The firmware and parameter settings are stored on the CompactFlash card, which is plugged into the Control Unit CU310.

Control Unit CU310 DP

Control Unit CU310 PN

Control Unit Adapter CUA31

Control Unit Adapter CUA32

Figure 6-1 Slot for the CompactFlash card on a CU310 Control Unit

Note

The Control Unit and the CompactFlash card must be ordered separately.

6.2 Control Unit CU310 DP (PROFIBUS)

6.2.1 Description

The Control Unit 310 DP (PROFIBUS) is the component in which the open-loop and closed-loop control functions of a drive are implemented.

The CU310 DP has the following interfaces (ports):

Table 6-1 Overview of the CU310 interfaces

Type	Number
Digital inputs	4
Digital inputs/outputs	4
DRIVE-CLiQ interfaces	1
PROFIBUS interface	1
Serial interface (RS232)	1
Power Module Interface (PM-IF)	1
Encoder interface (HTL/TTL/SSI)	1
EP terminals / temperature sensor	1
24 V electronics power supply	1
Test sockets	3+1
Interface for BOP	1

Note

For test purposes, the fan also runs in the cold state at regular intervals.

6.2.2 Safety information

Note

The CompactFlash card may only be inserted and removed from the Control Unit when in the no-voltage condition.

WARNING

The cooling clearances of 50 mm above and below the components must be observed. It is not permissible that the connecting cables cover the cooling openings.

6.2.3 Interface description

6.2.3.1 Overview

Figure 6-2 Description of the CU310 DP interfaces (ports)

6.2.3.2 Sample connection

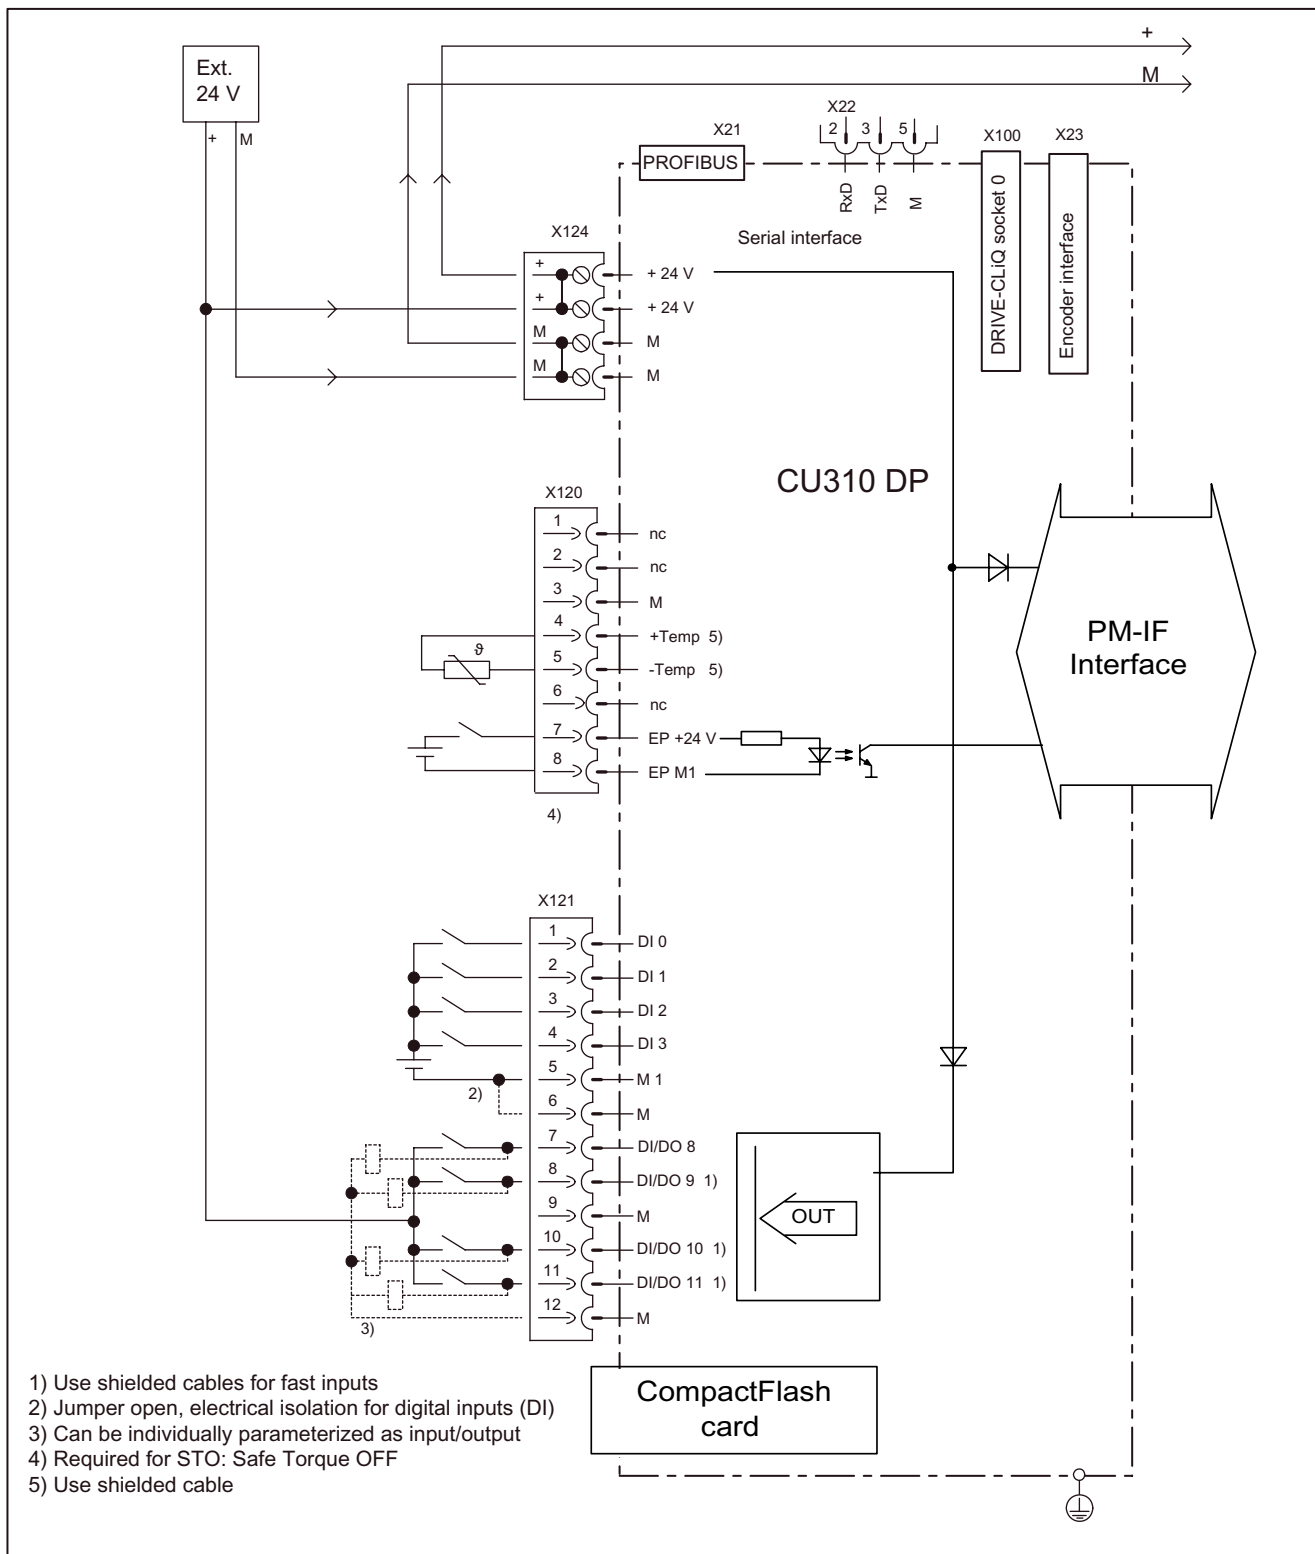

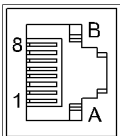

Figure 6-3 Connection example CU310 DP

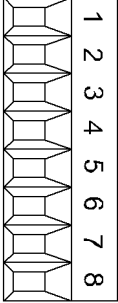

6.2.3.3 X100 DRIVE-CLiQ interface

Table 6-2 DRIVE-CLiQ interface

	Pin	Signal name	Technical specifications	
	1	TXP	Transmit data +	
	2	TXN	Transmit data -	
	3	RXP	Receive data +	
	4	Reserved, do not use		
	5	Reserved, do not use		
	6	RXN	Receive data -	
	7	Reserved, do not use		
	8	Reserved, do not use		
	A	+ (24 V)	Power supply	
	W	M (0 V)	Electronics ground	
	Blanking plate for DRIVE-CLiQ interface: Yamaichi, Order No.: Y-ConAS-13			

6.2.3.4 X120 EP terminals / temperature sensor

Table 6-3 Terminal strip X120

	Terminal	Function	Technical specifications
	1	Reserved, do not use	
	2	Reserved, do not use	
	3	M	Ground
	4	+Temp ¹⁾	KTY or PTC input
	5	-Temp ¹⁾	Ground for KTY or PTC
	6	Reserved, do not use	
	7	EP +24 V ²⁾	Safe standstill input (+)
	8	EP M1 ²⁾	Safe standstill input (-)
Max. connectable cross-section 1.5 mm ²			

¹⁾This is the only temperature channel for Order No. 6SL3040-0LA00-0AA0. For Order No. 6SL3040-0LA00-0AA1, this is the second temperature channel (T2), which can be used as single channel dependent on the parameterization or in combination with the first temperature channel (T1, refer to X23).

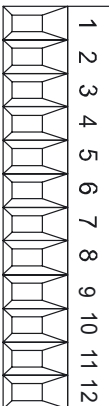

²⁾ The EP terminals must be wired on the Power Module on chassis units.

NOTICE
The KTY temperature sensor/the PTC must be connected with the correct polarity.

Further information on the temperature sensors can be found in the following literature:
 Literature: /IH1/ SINAMICS S120, Commissioning Manual, Chapter "Temperature sensors for SINAMICS components."

6.2.3.5 X121 digital inputs/outputs

Table 6-4 Terminal strip X121

	Terminal	Designation ¹⁾	Technical specifications
	1	DI 0	Voltage: -3 V to 30 V
	2	DI 1	Typical current consumption: 10 mA at 24 V DC
	3	DI 2	Isolation: The reference potential is terminal M1
	4	DI 3	Level (incl. ripple)
	5	M1	High level: 15 V to 30 V
	6	M	Low level: -3 V to 5 V
	7	DI/DO 8	Signal propagation times: L → H approx. 50 μs H → L: approx. 100 μs
	8	DI/DO 9	As input: Voltage: -3 V to 30 V
	9	M	Typical current consumption: 10 mA at 24 V DC
	10	DI/DO 10	Level (incl. ripple)
	11	DI/DO 11	High level: 15 V to 30 V
	12	M	Low level: -3 V to 5 V
Max. connectable cross-section: 1.5 mm ²			Terminal numbers 8, 10, and 11 are "fast inputs"
Type: Spring-loaded terminal 1 (see Appendix A)			Signal propagation times for inputs/"fast inputs": L → H: approx. 50 μs/5 μs H → L: approx. 100 μs/50 μs
			As output: Voltage: 24 V DC Max. load current per output: 500 mA Continued-short-circuit-proof Signal propagation times of the outputs: L → H: approx. 150 μs

1) DI: digital input; DI/DO: Bidirectional digital input/output; M: Electronics ground M1: Ground reference

NOTICE

An open input is interpreted as "low".

The "fast inputs" can be used in conjunction with a measuring system for position sensing.

To enable digital inputs (DI) 0 to 3 to function, terminal M1 must be connected. This can be done as follows:

Connect the digital inputs' ground reference, or a jumper to terminal M. This removes the electrical isolation for these digital inputs.

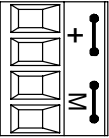

Note

A 24 V voltage supply must be connected to terminal X124 so that the digital outputs can be used.

If the 24 V supply is briefly interrupted, then the digital outputs are de-activated during this time.

6.2.3.6 Electronics power supply X124

Table 6-5 Terminal block X124

	Terminal	Function	Technical specifications
	+	Electronics power supply	Voltage: 24 V DC (20.4 V - 28.8 V) Current consumption: max. 0.8 A (without DRIVE-CLiQ or digital outputs) Max. current via jumper in connector: 20 A at 55 °C
	+	Electronics power supply	
	M	Electronic ground	
	M	Electronic ground	
Max. connectable cross-section: 2.5 mm ² Type: Screw terminal 2 (see Appendix A)			

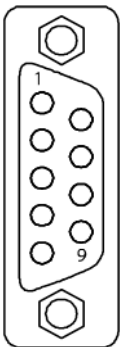

Note

The two “+” and “M” terminals are jumpered in the connector. This ensures the supply voltage is looped through.

The current consumption increases by the value for the DRIVE-CLiQ node.

6.2.3.7 X21 PROFIBUS

Table 6-6 PROFIBUS interface X21

	Pin	Signal name	Meaning	Range
	1	-	Not assigned	
	2	M24_SERV	Supply for teleservice, ground	0 V
	3	RxD/TxD-P	Receive/transmit data P (B)	RS485
	4	CNTR-P	Control signal	TTL
	5	DGND	PROFIBUS data reference potential	
	6	VP	Power supply plus	5 V + -10 %
	7	P24_SERV	Supply for teleservice, + (24 V)	24 V (20.4 V - 28.8 V)
	8	RxD/TxD-N	Receive/transmit data N (A)	RS485
	9	-	Not assigned	

Type: 9-pin SUB-D female

Note

A teleservice adapter can be connected to the PROFIBUS interface (X21) for remote diagnosis purposes.

The power supply for the teleservice terminals 2 and 7 withstands a max. load and continued short-circuit current of 150 mA.

 **CAUTION**

An equipotential bonding conductor with a cross-section of at least 25 mm² must be used between components in a system that are located at a distance from each other. If an equipotential bonding conductor is not used, leakage currents that could destroy the Control Unit or other PROFIBUS nodes can be conducted via the PROFIBUS cable.

PROFIBUS connector

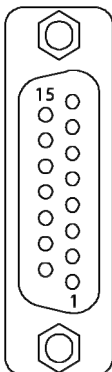

At the first and last node (device) in a line, the terminating resistors must be switched-in in order to ensure disturbance/noise-free communications.

The terminating resistors are activated in the connector.

The cable shield must be connected at both ends over large-surface area contacts.

6.2.3.8 X23 HTL/TTL/SSI encoder interface

Table 6-7 Encoder connection X23

	Pin	Signal name	Technical specifications
	1	+Temp*	KTY or PTC input
	2	SSI_CLK*	SSI clock, positive
	3	SSI_XCLK*	SSI clock, negative
	4	P_Encoder 5 V / 24 V	Encoder power supply
	5	P_Encoder 5 V / 24 V	Encoder power supply
	6	P_Sense	Sense input encoder power supply
	7	M_Encoder (M)	Ground for encoder power supply
	8	-Temp*	Ground for KTY or PTC
	9	M_Sense	Ground sense input
	10	RP	R track positive
	11	RN	R track negative
	12	BN	B track negative
	13	BP	B track positive
	14	AN_SSI_XDAT	A track negative / SSI data negative
	15	AP_SSI_DAT	A track positive / SSI data positive

Type: 15-pin sub D connector

*to Pin 1 / Pin 8: These signals are only assigned from Order No. 6SL3040-0LA00-0AA1. The associated temperature channel (T1) can be parameterized as an individual channel or in combination with the second temperature channel (T2) at interface X120 (for parameterization information, refer to the Commissioning Manual).
 Re. pin 2 / pin 3: These signals are only assigned from Order No. 6SL3040-0LA00-0AA1.

NOTICE
The KTY temperature sensor/the PTC must be connected with the correct polarity.

Table 6-8 Specification of measuring systems that can be connected

Parameter	Designation	Threshold	Min.	Type	Max.	Unit
High signal level (TTL bipolar at X23) ¹⁾	U_{Hdiff}		2		5	V
Low signal level (TTL bipolar at X23) ¹⁾	U_{Ldiff}		-5		-2	V
High signal level (HTL unipolar)	U_H :	High	17		V_{CC}	V
		Low	10		V_{CC}	V
Low signal level (HTL unipolar)	U_L	High	0		7	V
		Low	0		2	V
High signal level (HTL bipolar) ²⁾	U_{Hdiff}		3		V_{CC}	V
Low signal level (HTL bipolar) ²⁾	U_{Ldiff}		$-V_{CC}$		-3	V
High signal level (SSI bipolar at X23) ¹⁾³⁾	U_{Hdiff}		2		5	V
Low signal level (SSI bipolar at X23) ¹⁾³⁾	U_{Ldiff}		-5		-2	V
Signal frequency	f_s		-		500	kHz
Edge clearance	t_{min}		100		-	ns
Zero pulse (with $T_s = 1/f_s$)	Length		$\frac{1}{4} \cdot T_s$		$\frac{3}{4} \cdot T_s$	
	Center of the pulse position		50	135	220	Degrees

¹⁾ Other signal levels according to the RS422 standard.

²⁾ The absolute level of the individual signals varies between 0 V and V_{CC} of the measuring system.

³⁾ Only from Order No. 6SL3040-0LA00-0AA1 and Firmware 2.5 SP1.

Note

We recommend that bipolar encoders are used.

When uni-polar encoders are used, the 15-pin sub D connector should be opened and the unused inverse signals (AN Pin14, BN Pin12 and RN Pin11) connected to ground (Pin7).

6.2.3.9 PROFIBUS address switches

Table 6-9 PROFIBUS address switches

Technical specifications	Switch	Significance															
Significance: <table style="margin-left: 20px;"> <tr> <td>2^0</td><td>2^1</td><td>2^2</td><td>2^3</td><td>2^4</td><td>2^5</td><td>2^6</td> </tr> <tr> <td>1</td><td>2</td><td>4</td><td>8</td><td>16</td><td>32</td><td>64</td> </tr> </table>  S1 S2 S3 S4 S5 S6 S7	2^0	2^1	2^2	2^3	2^4	2^5	2^6	1	2	4	8	16	32	64	S1	$2^0 = 1$	
	2^0	2^1	2^2	2^3	2^4	2^5	2^6										
	1	2	4	8	16	32	64										
	S2	$2^1 = 2$															
	S3	$2^2 = 4$															
	S4	$2^3 = 8$															
	S5	$2^4 = 16$															
S6	$2^5 = 32$																
S7	$2^6 = 64$																
Example: <table style="margin-left: 20px;"> <tr> <td>1</td><td>+</td><td>4</td><td>+</td><td>32</td><td>=</td><td>37</td> </tr> <tr> <td colspan="6"></td> <td>PROFIBUS address</td><td>= 37</td> </tr> </table>	1	+	4	+	32	=	37							PROFIBUS address	= 37		
1	+	4	+	32	=	37											
						PROFIBUS address	= 37										

Note

The PROFIBUS address switches are defaulted to 0 or 127. In these two settings, addresses are assigned via parameters.

The address switch is behind the blanking plate. The blanking plate is part of the scope of supply.

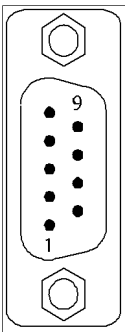

Setting the PROFIBUS address

The following reference contains further information about setting the PROFIBUS address:

Reference: /IH1/ SINAMICS S120 Commissioning Manual.

6.2.3.10 X22 serial interface (RS232)

Table 6-10 Serial interface (RS-232-C) X140

	Pin	Designation	Technical data
	2	RxD	Receive data
	3	TxD	Transmit data
	5	Ground	Ground reference
Type: 9-pin SUB D connector			

6.2.3.11 Measurement sockets T0, T1, and T2

Table 6-11 Measurement sockets T0, T1, and T2

Socket	Function	Technical specifications
T0	Measurement socket 0	Voltage: 0 V to 5 V Resolution: 8 bits Load current: max. 3 mA Continued-short-circuit-proof
T1	Measurement socket 1	
T2	Measurement socket 2	
M	Ground	The reference potential is terminal M
The measurement sockets are only suitable for bunch pin plugs with a diameter of 2 mm.		

Note

The test sockets are provided as a support to commissioning and diagnostics; they must not be connected for normal operation.

6.2.3.12 Slot for the CompactFlash card

Figure 6-4 Slot for CompactFlash card

CAUTION

The CompactFlash card may only be inserted as shown in the figure (arrow top right).

The CompactFlash card may only be inserted or removed when the Control Unit is in a no-voltage condition.

When returning a defective Control Unit, remove the CompactFlash card and keep it for insertion in the replacement unit.

6.2.3.13 Description of the LEDs on the Control Unit

The individual statuses during booting are indicated via the LEDs on the Control Unit (CU310).

- The duration of the individual statuses varies.
- If an error occurs, booting is aborted and the cause of the error is indicated via the LEDs.
Remedy: Insert the appropriate CompactFlash card with the correct software and parameters.
- Once the unit has been successfully booted, all the LEDs are switched off briefly.
- Once the unit has been booted, the LEDs are driven via the loaded software.

The description of the LEDs after booting applies.

Control Unit 310 - behavior of the LEDs during booting

Table 6-12 Load software 1

LED				Status	Comment
RDY	DP1	OPT	MOD		
red	red	red	off	Reset	–
red 2 Hz	red	red	off	error	<ul style="list-style-type: none"> • CompactFlash card not inserted or • Load software 2 has not been installed on the CompactFlash card or is defective.

Table 6-13 Load software 2

LED				Status	Comment
RDY	DP1	OPT	MOD		
off	red	red	off	Loaded	–
off	Orange	red	off	Running	–
off	red 2 Hz	red	off	error file	Software on the CompactFlash card is incomplete or defective.
off	red 0,5 Hz	red	off	error crc	CRC invalid.
off	off	red	off	Firmware loaded	–

Table 6-14 Firmware

LED				Status	Comment
RDY	DP1	OPT	MOD		
off	off	off	off	initializing	–
alternating				Running	refer to the following table

Table 6-15 Control Unit 310 – description of the LEDs after booting

LED	Color	Status	Description, cause	Remedy
RDY (READY)	-	OFF	Electronics power supply is missing or outside permissible tolerance range.	-
	Green	Continuous	The component is ready and cyclic DRIVE-CLiQ communication takes place or the Control Unit waits for first commissioning.	-
		Flashing 2 Hz	Writing to CompactFlash card.	-
	Red	Continuous	At least one fault is present in this component.	Remedy and acknowledge fault
		Flashing 2 Hz	Boot error	Make sure that the CompactFlash card has been inserted properly. Replace the CompactFlash Card. Replace Control Unit. Carry-out a POWER ON.
	Green/ Red	Flashing 0.5 Hz	Control Unit 310 is ready for operation. However there are no software licenses.	Obtain licenses.
	Orange	Continuous	DRIVE-CLiQ communication is being established.	-
		Flashing 0.5 Hz	Updating the firmware of the DRIVE-CLiQ components.	-
		2 Hz flashing light	Firmware update is complete for components. Wait for POWER ON for the components in question	Turn POWER ON for the components in question
	Green/ orange or red/ orange	1 Hz flashing light	Component detection via LED is activated (p0124[0]). Note: Both options depend on the LED status when component recognition is activated via p0124[0] = 1.	-
COM PROFIdrive cyclic operation	-	OFF	Cyclic communication has not (yet) taken place. Note: The PROFIdrive is ready to communicate when the Control Unit is ready to operate (see LED RDY).	-
	Green	Continuous	Cyclic communication is taking place.	-
		Flashing 0.5 Hz	Cyclic communication is not yet running fully. Possible reasons: <ul style="list-style-type: none"> The controller is not transferring any setpoints. During isochronous operation, no global control (GC) or a faulty global control (GC) is transferred by the Controller. 	-
	Red	Continuous	Cyclic communication has been interrupted.	Remedy fault

LED	Color	Status	Description, cause	Remedy
	Orange	Flashing 2 Hz	Firmware CRC error.	Make sure that the CompactFlash card has been inserted properly. Replace the CompactFlash Card. Replace Control Unit. Carry-out a POWER ON.
OUT>5 V	-	OFF	Electronics power supply is missing or outside permissible tolerance range. Voltage supply 5 V	-
	Orange	Continuous	Electronics power supply for measuring system available. Power supply >5 V. Important: Make sure that the connected encoder can be operated with a 24 V power supply. If an encoder that is designed for a 5 V supply is operated with a 24 V supply, this can destroy the encoder electronics.	-
MOD	-	OFF	Reserved	-

6.2.4 Dimension drawing

Figure 6-5 Dimension drawing CU310 DP

6.2.5 Mounting the CU310 on the Power Module Blocksize

As soon as the Power Module has been correctly installed, the Control Unit can be attached to the Power Module.

The procedure when mounting the Control Unit on the Power Module is independent of the frame size of the Power Modules.

Removing the Control Unit

Removing the CU310 from the Power Module PM340 (frame size FSD)

In order to remove the Control Unit from the Power Module, the blue release lever, as shown in the diagram, must be pressed downwards and the Control Unit swung-out to the front.

6.2.6 Mounting the CU310 in the Power Module Chassis

Figure 6-6 Mounting the CU310 in the Power Module chassis format, frame size FX

The DRIVE-CLiQ cable and the cable for the 24 V supply must be correctly routed so that the front flap can close.

Note

For the Power Module, a connecting cable is also supplied for the power supply of the CU310. Customers must connect-up this cable.

This means that the CU310 no longer has to be supplied from an external 24 V DC.

6.2.7 Technical data

Table 6-16 Technical specifications CU310 DP

	Unit	Value
Electronics power supply		
Voltage	V _{DC}	24 DC (20.4 – 28.8)
Current (without DRIVE-CLiQ and digital outputs)	A _{DC}	0.8
Power loss	W	<20
Maximum DRIVE-CLiQ cable length	m	100
PE/ground connection	On housing with M4/3 Nm screw	
Response time	The response time of digital inputs/outputs depends on the evaluation (refer to the function diagram). Reference: /LH1/ SINAMICS S List Manual, Chapter "Function diagrams".	
Weight	kg	0,95

6.3 Control Unit CU310 PN (PROFINET)

6.3.1 Description

The Control Unit 310 PN (PROFINET) is the control module in which the open-loop and closed-loop control functions of a drive are implemented.

The CU310 PN has the following interfaces (ports):

Table 6-17 Overview of the CU310 PN interfaces (ports)

Type	Number
Digital inputs	4
Digital inputs/outputs	4
DRIVE-CLiQ interface	1
PROFINET interfaces	2
Serial interface (RS232)	1
Power Module Interface (PM-IF)	1
Encoder interface (HTL/TTL/SSI)	1
EP terminals / temperature sensor	1
24 V electronics power supply	1
Test sockets	3+1
Interface for BOP	1

Available from approx. 07/2006.

6.3.2 Safety information

Note

The CompactFlash card may only be inserted and removed from the Control Unit when in the no-voltage condition.

WARNING

The cooling clearances of 50 mm above and below the components must be observed. It is not permissible that the connecting cables cover the cooling openings.

6.3.3 Interface description

6.3.3.1 Overview

Figure 6-7 Description of the CU310 PN interfaces

Note

The PROFIBUS address switch is present for the CU310 PN, however it has not function.

6.3.3.2 Sample connection

Max. connectable cross-section 1.5 mm²

¹⁾This is the only temperature channel for Order No. 6SL3040-0LA01-0AA0. For Order No. 6SL3040-0LA01-0AA1, this is the second temperature channel (T2), which can be used as single channel dependent on the parameterization or in combination with the first temperature channel (T1, refer to X23).

²⁾ The EP terminals must be wired on the Power Module on chassis units.

NOTICE

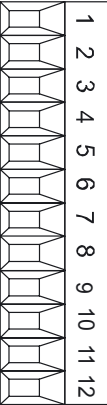

The KTY temperature sensor/the PTC must be connected with the correct polarity.

Further information on the temperature sensors can be found in the following literature:

Reference: /IH1/ SINAMICS S120, Commissioning Manual, Chapter "Temperature sensors for SINAMICS components."

6.3.3.5 X121 digital inputs/outputs

Table 6-20 Terminal strip X121

	Terminal	Designation ¹⁾	Technical specifications
	1	DI 0	Voltage: -3 V to 30 V Typical current consumption: 10 mA at 24 V DC Isolation: The reference potential is terminal M1 Level (incl. ripple) High level: 15 V to 30 V Low level: -3 V to 5 V
	2	DI 1	
	3	DI 2	
	4	DI 3	
	5	M1	Signal propagation times: L → H approx. 50 µs H → L: approx. 100 µs
	6	M	
	7	DI/DO 8	As input: Voltage: -3 V to 30 V Typical current consumption: 10 mA at 24 V DC Level (incl. ripple) High level: 15 V to 30 V Low level: -3 V to 5 V Terminal numbers 8, 10, and 11 are "fast inputs" Signal propagation times for inputs/"fast inputs": L → H: approx. 50 µs/5 µs H → L: approx. 100 µs/50 µs As output: Voltage: 24 V DC Max. load current per output: 500 mA Continued-short-circuit-proof Signal propagation times of the outputs: L → H: approx. 150 µs
	8	DI/DO 9	
	9	M	
	10	DI/DO 10	
	11	DI/DO 11	
	12	M	
Max. connectable cross-section: 1.5 mm ² Type: Spring-loaded terminal 1 (see Appendix A)			

1) DI: digital input; DI/DO: Bidirectional digital input/output; M: Electronics ground M1: Ground reference

NOTICE

An open input is interpreted as "low".

The "fast inputs" can be used in conjunction with a measuring system for position sensing.

To enable digital inputs (DI) 0 to 3 to function, terminal M1 must be connected. This can be done as follows:

Connect the digital inputs' ground reference, or a jumper to terminal M. This removes the electrical isolation for these digital inputs.

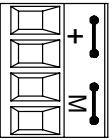

Note

A 24 V voltage supply must be connected to terminal X124 so that the digital outputs can be used.

If the 24 V supply is briefly interrupted, then the digital outputs are de-activated during this time.

6.3.3.6 Electronics power supply X124

Table 6-21 Terminal block X124

	Terminal	Function	Technical specifications
	+	Electronics power supply	Voltage: 24 V DC (20.4 V - 28.8 V) Current consumption: max. 0.8 A (without DRIVE-CLiQ or digital outputs) Max. current via jumper in connector: 20 A at 55 °C
	+	Electronics power supply	
	M	Electronic ground	
	M	Electronic ground	
Max. cross-section that can be connected: 2.5 mm ² Type: Screw terminal 2 (see Appendix A)			

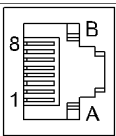

Note

The two “+” and “M” terminals are jumpered in the connector. This ensures the supply voltage is looped through.

The current consumption increases by the value for the DRIVE-CLiQ node.

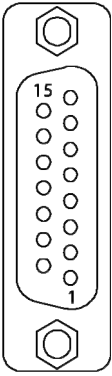

6.3.3.7 X200 - X201 PROFINET

Table 6-22 PROFINET interfaces X200 - X201

	Pin	Signal name	Meaning
	1	TXP	Transmit data +
	2	TXN	Transmit data -
	3	RXP	Receive data +
	4	Reserved, do not use	
	5	Reserved, do not use	
	6	RXN	Receive data -
	7	Reserved, do not use	
	8	Reserved, do not use	
Connector type: RJ45plus socket Cable type: PROFINET			

6.3.3.8 X23 HTL/TTL/SSI encoder interface

Table 6-23 Encoder connection X23

	Pin	Signal name	Technical specifications
	1	+Temp*	KTY or PTC input
	2	SSI_CLK*	SSI clock, positive
	3	SSI_XCLK*	SSI clock, negative
	4	PENC	Encoder power supply
	5	PENC	Encoder power supply
	6	PSENSE	Remote sense encoder power supply (P)
	7	M	Electronics ground
	8	-Temp*	Ground for KTY or PTC
	9	MSENSE	Remote sense encoder power supply (N)
	10	RP	R track positive
	11	RN	R track negative
	12	BN	B track negative
	13	BP	B track positive
	14	AN_SSI_XDAT	A track negative / SSI data negative
	15	AP_SSI_DAT	A track positive / SSI data positive

Type: 15-pin sub D connector

*to Pin 1 / Pin 8: These signals are only assigned from Order No. 6SL3040-0LA01-0AA1. The associated temperature channel (T1) can be parameterized as an individual channel or in combination with the second temperature channel (T2) at interface X120 (for parameterization information, refer to the Commissioning Manual).
 Re. pin 2 / pin 3: These signals are only assigned from Order No. 6SL3040-0LA01-0AA1.

NOTICE

The KTY temperature sensor/the PTC must be connected with the correct polarity.

Table 6-24 Specification of measuring systems that can be connected

Parameter	Designation	Threshold	Min.	Type	Max.	Unit
High signal level (TTL bipolar at X23) ¹⁾	U _{Hdiff}		2		5	V
Low signal level (TTL bipolar at X23) ¹⁾	U _{Ldiff}		-5		-2	V
High signal level (HTL unipolar)	U _H	High	17		V _{CC}	V
		Low	10		V _{CC}	V
Low signal level (HTL unipolar)	U _L	High	0		7	V
		Low	0		2	V
High signal level (HTL bipolar) ²⁾	U _{Hdiff}		3		V _{CC}	V
Low signal level (HTL bipolar) ²⁾	U _{Ldiff}		-V _{CC}		-3	V
High signal level (SSI bipolar at X23) ¹⁾³⁾	U _{Hdiff}		2		5	V
Low signal level (SSI bipolar at X23) ¹⁾³⁾	U _{Ldiff}		-5		-2	V
Signal frequency	f _s		-		500	kHz
Edge clearance	t _{min}		100		-	ns
Zero pulse (with T _s = 1/f _s)	Length		¼ · T _s		¾ · T _s	
	Center of the pulse position		50	135	220	Degrees

1) Other signal levels according to the RS422 standard.

2) The absolute level of the individual signals varies between 0 V and V_{CC} of the measuring system.

3) Only from Order No. 6SL3040-0LA01-0AA1 and Firmware 2.5 SP1.

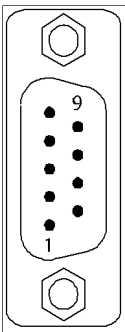

Note

We recommend that bipolar encoders are used.

When uni-polar encoders are used, the 15-pin sub D connector should be opened and the unused inverse signals (AN Pin14, BN Pin12 and RN Pin11) connected to ground (Pin7).

6.3.3.9 X22 serial interface (RS232)

Table 6-25 Serial interface (RS-232-C) X140

	Pin	Designation	Technical data
	2	RxD	Receive data
	3	TxD	Transmit data
	5	Ground	Ground reference
Type: 9-pin SUB D connector			

6.3.3.10 Measurement sockets T0, T1, and T2

Table 6-26 Measurement sockets T0, T1, and T2

Socket	Function	Technical specifications
T0	Measurement socket 0	Voltage: 0 V to 5 V Resolution: 8 bits Load current: max. 3 mA Continued-short-circuit-proof
T1	Measurement socket 1	
T2	Measurement socket 2	
M	Ground	The reference potential is terminal M
The measurement sockets are only suitable for bunch pin plugs with a diameter of 2 mm.		

Note

The test sockets are provided as a support to commissioning and diagnostics; they must not be connected for normal operation.

6.3.3.11 Description of the LEDs on the Control Unit

The individual statuses during booting are indicated via the LEDs on the Control Unit (CU310).

- The duration of the individual statuses varies.
- If an error occurs, booting is aborted and the cause of the error is indicated via the LEDs.
Remedy: Insert the appropriate CompactFlash card with the correct software and parameters.
- Once the unit has been successfully booted, all the LEDs are switched off briefly.
- Once the unit has been booted, the LEDs are driven via the loaded software.

The description of the LEDs after booting applies.

Control Unit 310 - behavior of the LEDs during booting

Table 6-27 Load software 1

LED				Status	Comment
RDY	DP1	OPT	MOD		
red	red	red	off	Reset	–
red 2 Hz	red	red	off	error	<ul style="list-style-type: none"> • CompactFlash card not inserted or • Load software 2 has not been installed on the CompactFlash card or is defective.

Table 6-28 Load software 2

LED				Status	Comment
RDY	DP1	OPT	MOD		
off	red	red	off	Loaded	–
off	Orange	red	off	Running	–
off	red 2 Hz	red	off	error file	Software on the CompactFlash card is incomplete or defective.
off	red 0,5 Hz	red	off	error crc	CRC invalid.
off	off	red	off	Firmware loaded	–

Table 6-29 Firmware

LED				Status	Comment
RDY	DP1	OPT	MOD		
off	off	off	off	initializing	–
alternating				Running	refer to the following table

Table 6-30 Control Unit 310 – description of the LEDs after booting

LED	Color	Status	Description, cause	Remedy
RDY (READY)	-	OFF	Electronics power supply is missing or outside permissible tolerance range.	-
	Green	Continuous	The component is ready and cyclic DRIVE-CLiQ communication takes place or the Control Unit waits for first commissioning.	-
		Flashing 2 Hz	Writing to CompactFlash card.	-
	Red	Continuous	At least one fault is present in this component.	Remedy and acknowledge fault
		Flashing 2 Hz	Boot error	Make sure that the CompactFlash card has been inserted properly. Replace the CompactFlash Card. Replace Control Unit. Carry-out a POWER ON.
	Green/ Red	Flashing 0.5 Hz	Control Unit 310 is ready for operation. However there are no software licenses.	Obtain licenses.
	Orange	Continuous	DRIVE-CLiQ communication is being established.	-
		Flashing 0.5 Hz	Updating the firmware of the DRIVE-CLiQ components.	-
		2 Hz flashing light	Firmware update is complete for components. Wait for POWER ON for the components in question	Turn POWER ON for the components in question
Green/ orange or red/ orange	1 Hz flashing light	Component detection via LED is activated (p0124[0]). Note: Both options depend on the LED status when component recognition is activated via p0124[0] = 1.	-	
COM PROFIdrive cyclic operation	-	OFF	Cyclic communication has not (yet) taken place. Note: The PROFIdrive is ready to communicate when the Control Unit is ready to operate (see LED RDY).	-
	Green	Continuous	Cyclic communication is taking place.	-
		Flashing 0.5 Hz	Cyclic communication is not yet running fully. Possible reasons: <ul style="list-style-type: none"> The controller is not transferring any setpoints. During isochronous operation, no global control (GC) or a faulty global control (GC) is transferred by the Controller. 	-
	Red	Continuous	Cyclic communication has been interrupted.	Remedy fault

LED	Color	Status	Description, cause	Remedy
	Orange	Flashing 2 Hz	Firmware CRC error.	Make sure that the CompactFlash card has been inserted properly. Replace the CompactFlash Card. Replace Control Unit. Carry-out a POWER ON.
OUT>5 V	-	OFF	Electronics power supply is missing or outside permissible tolerance range. Voltage supply 5 V	-
	Orange	Continuous	Electronics power supply for measuring system available. Power supply >5 V. Important: Make sure that the connected encoder can be operated with a 24 V power supply. If an encoder that is designed for a 5 V supply is operated with a 24 V supply, this can destroy the encoder electronics.	-
MOD	-	OFF	Reserved	-

6.3.4 Dimension drawing

Figure 6-9 Dimension drawing, CU310 PN

6.3.5 Mounting the CU310 on the Power Module Blocksize

As soon as the Power Module has been correctly installed, the Control Unit can be attached to the Power Module.

The procedure when mounting the Control Unit on the Power Module is independent of the frame size of the Power Modules.

Removing the Control Unit

Removing the CU310 from the Power Module PM340 (frame size FSD)

In order to remove the Control Unit from the Power Module, the blue release lever, as shown in the diagram, must be pressed downwards and the Control Unit swung-out to the front.

6.3.6 Technical data

Table 6-31 Technical specifications CU310 PN

	Unit	Value
Electronics power supply		
Voltage	V _{DC}	24 DC (20.4 – 28.8)
Current (without DRIVE-CLiQ and digital outputs)	A _{DC}	0.8
Power loss	W	20
Maximum DRIVE-CLiQ cable length	m	100
PE/ground connection	On housing with M4/3 Nm screw	
Response time	The response time of digital inputs/outputs depends on the evaluation (refer to the function diagram). Reference: /LH1/ SINAMICS S List Manual, Chapter "Function diagrams".	
Weight	kg	0,99

6.4 Control Unit Adapter CUA31

6.4.1 Description

The Control Unit Adapter CUA31 combined with a modular power unit is used to extend an existing DC/AC drive line-up e.g. with CU320 by one drive.

The closed-loop control is externally implemented. This is the reason that a SINAMICS, SIMOTION or SINUMERIK closed-loop control is always required for operation.

The Control Unit Adapter CUA31 has the following interfaces (ports):

Table 6-32 Interface overview of the CUA31

Type	Number
DRIVE-CLiQ interfaces	3
EP terminal / temperature sensor	1
Power Module Interface (PM-IF)	1
24 V electronics power supply	1

6.4.2 Safety Information

 WARNING
The cooling clearances of 50 mm above and below the components must be observed. It is not permissible that the connecting cables cover the cooling openings.

6.4.3 Interface description

Max. connectable cross-section 1.5 mm ² Type: Screw terminal 1 (see Connection Methods)			

* Further reading: /IH1/ SINAMICS S120, Commissioning Manual, Chapter "Temperature sensors for SINAMICS components".

NOTICE

The KTY temperature sensor/the PTC must be connected with the correct polarity.

Note

The temperature sensor is required for motors whose temperature value is not transmitted by DRIVE-CLiQ.

If the "Sicherer Halt" function is selected, 24 V DC must be applied to terminals 3 and 4. Upon removal, pulse inhibit is activated.

6.4.3.5 Description of the LEDs on the Control Unit Adapter CUA31

Table 6-36 Description of the LEDs at the Control Unit Adapter 31

LED	Color	State	Description
RDY (READY)	Red	Steady light	At least one fault is present in this component.
	Green	Steady light	The component is ready for operation and cyclic DRIVE-CLiQ communication is taking place.

Cause and rectification of faults

The following reference contains information about the cause and rectification of faults:

Reference: /IH1/ SINAMICS S120 Commissioning Manual.

Figure 6-12 Dimension drawing of the Control Unit Adapter CUA31

6.4.5 Mounting

Removing the Control Unit Adapters CUA31

Removing the CUA31 from the Power Module 340 (frame size FSD)

In order to remove the Control Unit Adapter CUA31 from the Power Module, the blue release lever, as shown in the diagram, must be pressed downwards and the Control Unit Adapter CUA31 is swung-out to the front.

6.4.6 Technical data

Table 6-37 Technical specifications CUA31

	Unit	Value
Electronics power supply		
Voltage	V _{DC}	24 DC (20.4 – 28.8)
Current (without DRIVE-CLiQ)	A _{DC}	0.1
Power loss	W	2.4
For CUA31 with order no. 6SL3040-0PA00-0AA0, the maximum DRIVE-CLiQ connection length is	m	50
For CUA31 as of order no. 6SL3040-0PA00-0AA1, the maximum DRIVE-CLiQ connection length is	m	100
Weight	kg	0,31

6.5 CUA32 Control Unit Adapter

6.5.1 Description

The CUA32 Control Unit Adapter combined with a modular power unit is used to extend an existing DC/AC drive line-up e.g. with CU320 by one drive. It also provides an encoder interface (HTL / TTL / SSI).

The closed-loop control is externally implemented. This is the reason that a SINAMICS, SIMOTION or SINUMERIK closed-loop control is always required for operation.

The CUA32 Control Unit Adapter has the following interfaces (ports):

Table 6-38 Interface overview of the CUA32

Type	Number
DRIVE-CLiQ interfaces	3
EP terminal / temperature sensor	1
Power Module Interface (PM-IF)	1
24 V electronics power supply	1
Encoder interface (HTL / TTL / SSI ⁽¹⁾)	1

¹Only SSI encoders without incremental tracks can be operated on the CUA32.

6.5.2 Safety Information

 **WARNING**

The cooling clearances of 50 mm above and below the components must be observed. It is not permissible that the connecting cables cover the cooling openings.

6.5.3 Interface description

	12	BN	B track negative
	13	BP	B track positive
	14	AN_SSI_XDAT	A track negative / SSI data negative
	15	AP_SSI_DAT	A track positive / SSI data positive

Type: 15-pin sub D connector

NOTICE

The KTY temperature sensor/the PTC must be connected with the correct polarity.

Table 6-42 Specification of measuring systems that can be connected

Parameter	Designation	Threshold	Min.	Type	Max.	Unit
High signal level (TTL bipolar at X220)	U_{Hdiff}		2		5	V
Low signal level (TTL bipolar at X220)	U_{Ldiff}		-5		-2	V
High signal level (HTL unipolar)	U_H	High	17		V_{CC}	V
		Low	10		V_{CC}	V
Low signal level (HTL unipolar)	U_L	High	0		7	V
		Low	0		2	V
High signal level (HTL bipolar)	U_{Hdiff}		3		V_{CC}	V
Low signal level (HTL bipolar)	U_{Ldiff}		$-V_{CC}$		-3	V
High signal level (SSI bipolar at X220)	U_{Hdiff}		2		5	V
Low signal level (SSI bipolar at X220)	U_{Ldiff}		-5		-2	V
Signal frequency	f_s		-		500	kHz
Edge clearance	t_{min}		100		-	ns
Zero pulse (with $T_s = 1/f_s$)	Length		$\frac{1}{4} \cdot T_s$		$\frac{3}{4} \cdot T_s$	
	Center of the pulse position		50	135	220	Degrees

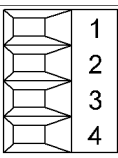

Note

We recommend that bipolar encoders are used.

When uni-polar encoders are used, the 15-pin sub D connector should be opened and the unused inverse signals (AN Pin14, BN Pin12 and RN Pin11) connected to ground (Pin7).

6.5.3.5 X210 EP terminals / temperature sensor

Table 6-43 Terminal strip X210

	Terminal	Function	Technical specifications
	1	+ Temp*	Temperature sensor KTY84-1C130/PTC
	2	- Temp*	
	3	EP +24 V (Enable Pulses)	Supply voltage: 24 V DC (20.4 V - 28.8 V) Current consumption: 10 mA Isolated input Signal propagation times: L → H 100 μs H → L: 1000 μs
	4	EP M1 (Enable Pulses)	
Max. connectable cross-section 1.5 mm ² Type: Screw terminal 1 (see Connection Methods)			

* Further reading: /IH1/ SINAMICS S120, Commissioning Manual, Chapter "Temperature sensors for SINAMICS components".

NOTICE
The KTY temperature sensor/the PTC must be connected with the correct polarity.

Note

The temperature sensor is required for motors whose temperature value is not transmitted by DRIVE-CLiQ.
 If the "Sicherer Halt" function is selected, 24 V DC must be applied to terminals 3 and 4.
 Upon removal, pulse inhibit is activated.

6.5.3.6 Description of the LEDs on the CUA32 Control Unit Adapter

Table 6-44 Description of the LEDs on the CUA32 Control Unit Adapter

LED	Color	Status	Description
RDY (READY)	Red	Continuous	At least one fault is present in this component.
	Green	Continuous	The component is ready for operation and cyclic DRIVE-CLiQ communication is taking place.
OUT > 5V	-	Off	Electronics power supply is missing or outside permissible tolerance range. Power supply ≤ 5 V.
	Orange	Continuous	Electronics power supply for measuring system available. Power supply > 5 V. Caution You must ensure that the connected encoder can be operated with a 24 V power supply. If an encoder that is designed for a 5 V power supply is operated with a 24 V power supply, this can destroy the encoder electronics.

Cause and rectification of faults

The following reference contains information about the cause and rectification of faults:

Reference: /IH1/ SINAMICS S120 Commissioning Manual.

7.2 Basic Operator Panel BOP20

7.2.1 Description

The Basic Operator Panel BOP20 is a basic operator panel with six keys and a backlit display unit. The BOP20 can be inserted on the SINAMICS Control Unit CU310 DP / PN and operated.

The BOP20 supports the following functions:

- Input of parameters and activation of functions
- Display of operating modes, parameters, alarms and faults

7.2.2 Interface description

Figure 7-1 Basic Operator Panel BOP20

Overview of displays and keys

Figure 7-2 Overview of displays and keys

Table 7-2 Displays

Display	Meaning
top left 2 positions	The active drive object of the BOP is displayed here. The displays and key operations always refer to this drive object.
RUN	Is lit (bright) if the displayed drive is in the RUN state (in operation).
top right 2 positions	The following is displayed in this field: <ul style="list-style-type: none"> • More than 6 digits: Characters that are present but cannot be seen (e.g. "r2" → 2 characters to the right are invisible, "L1" → 1 character to the left is invisible) • Faults: Selects/displays other drives with faults • Designation of BICO inputs (bi, ci) • Designation of BICO outputs (bo, co) Source object of a BICO interconnection to a drive object different than the active one.
S	Is (bright) if at least one parameter was changed and the value was not transferred into the non-volatile memory.
P	Is lit (bright) if, for a parameter, the value only becomes effective after pressing the P key.
C	Is light (bright) if at least one parameter was changed and the calculation for consistent data management has still not been initiated.
Below, 6 position	Displays, e.g. parameters, indices, faults and alarms.

BOP20 keyboard

Table 7-3 Assignment of the BOP20 keyboard

Key	Name	Meaning
	ON	Powering-up the drives for which the command "ON/OFF1", "OFF2" or "OFF3" should come from the BOP.
	OFF	Powering-down the drives for which the commands "ON/OFF1", "OFF2" or "OFF3" should come from the BOP.
		<p>Note:</p> <p>The effectiveness of these keys can be defined using the appropriate BICO parameterization (e.g. using these keys, it is possible to simultaneously control all of the axes that have been configured).</p> <p>The structure of the BOP control word corresponds to the structure of the PROFIBUS control word.</p>
	Functions	<p>The significance of these keys depends on the actual display.</p> <p>Note:</p> <p>The effectiveness of this key to acknowledge faults can be defined using the appropriate BiCo parameterization.</p>
	Parameter	The significance of these keys depends on the actual display.
	Raise	The keys are dependent on the actual display and are used to raise or lower values.
	Lower	

Displays and operating the BOP20

Information about the displays and using the BOP20 is provided in the following reference:

7.2.3 Mounting

Table 7-4 Mounting

 A hand is shown holding a light blue BOP20 panel in front of a Siemens SINAMICS CU310 DP control unit. The unit has terminals labeled X10, X12, X1, X2, X3, X4, X5, X6, X7, X8, X9, X11, X13, X14, X15, X16, X17, X18, X19, X20, X21, X22, X23, X24, X25, X26, X27, X28, X29, X30, X31, X32, X33, X34, X35, X36, X37, X38, X39, X40, X41, X42, X43, X44, X45, X46, X47, X48, X49, X50, X51, X52, X53, X54, X55, X56, X57, X58, X59, X60, X61, X62, X63, X64, X65, X66, X67, X68, X69, X70, X71, X72, X73, X74, X75, X76, X77, X78, X79, X80, X81, X82, X83, X84, X85, X86, X87, X88, X89, X90, X91, X92, X93, X94, X95, X96, X97, X98, X99, X100.	 A hand is shown pressing the two light blue bars of the dummy cover together, securing it in front of the control unit.
<p>1. CU310 and BOP20</p>	<p>2. Press the bars of the dummy cover together</p>
 A hand is shown pulling the light blue dummy cover away from the control unit, revealing the BOP20 panel.	 A hand is shown pointing to the BOP20 panel, which is now visible on the control unit.
<p>3. Remove the dummy cover</p>	<p>4. Locate the BOP20</p>

Note

The Basic Operator Panel BOP20 may be inserted and withdrawn while the Control Unit is operational.

7.3 Sensor Module Cabinet-Mounted SMC10

7.3.1 Description

The Sensor Module Cabinet-Mounted SMC10 evaluates encoder signals and transmits the speed, actual position value, rotor position and, if necessary, the motor temperature via DRIVE-CLiQ to the Control Unit.

The SMC10 is used to evaluate sensor signals from resolvers.

Table 7-5 Specification

	Value
Transmission ratio of the resolver	$\ddot{u} = 0.5$
Exciting voltage on the SMC10 when $\ddot{u}=0.5$	4.1 Vrms
Amplitude monitoring threshold (secondary tracks) of the SMC10	1 Vrms

The excitation voltage is 4.1 V rms and cannot be parameterized.

The excitation frequency is synchronized to the current controller clock cycle and lies in the range between 5 kHz and 10 kHz.

The ratio between the ohmic resistance R and the inductance L (the primary winding of the resolver) determines whether the resolver can be evaluated with the SMC10. See the following diagram:

Figure 7-3 Connectable impedances with an exciting frequency $f = 5000$ Hz

The maximum sensor cable length is 130 m.

7.3.2 Safety Information

 WARNING
--

The 50 mm clearances above and below the components must be observed.

NOTICE

Only one measuring system can be connected to each Sensor Module.

Note

There may be no electrical connection between the measuring system housing and the measuring system electronics (this requirement is fulfilled for most encoder systems). If this is not carefully observed, then under certain circumstances the system will not be able to reach the required noise immunity (there is then a danger of equalization currents flowing through the electronics ground).

CAUTION

Connecting cables to temperature sensors must always be installed with shielding. The cable shield must be connected to the chassis potential at both ends over a large surface area. Temperature sensor cables that are routed together with the motor cable must be twisted in pairs and shielded separately.

7.4 Sensor Module Cabinet-Mounted SMC20

7.4.1 Description

The Sensor Module Cabinet-Mounted SMC20 evaluates encoder signals and transmits the speed, actual position value, rotor position and, if necessary, the motor temperature and reference point via DRIVE-CLiQ to the Control Unit.

Encoders that can be connected are incremental SIN/COS (1 Vpp) and absolute encoders with EnDat and SSI.

7.4.2 Safety information

 WARNING
--

The 50 mm clearances above and below the components must be observed.

NOTICE

Only one measuring system can be connected to each Sensor Module.

Note

There may be no electrical connection between the measuring system housing and the measuring system electronics (this requirement is fulfilled for most encoder systems). If this is not carefully observed, then under certain circumstances the system will not be able to reach the required noise immunity (there is then a danger of equalization currents flowing through the electronics ground).

CAUTION

Connecting cables to temperature sensors must always be installed with shielding. The cable shield must be connected to the chassis potential at both ends over a large surface area. Temperature sensor cables that are routed together with the motor cable must be twisted in pairs and shielded separately.

7.5 Option modules, brake control

7.5.1 Introduction

A brake control option module (Safe Brake Relay) is required for operating motors with holding brakes.

The brake control option module is the electrical interface between the CU/PM340 and the brake of a motor.

This is mounted in the Screening Kit (refer to the Chapter "Screening Kit") or alternatively at the rear cabinet panel.

7.5.2 Safe Brake Relay

The Safe Brake Relay in conjunction with Power Modules of the Blocksize format can be used to trigger a 24 V DC motor brake.

The brake is electronically controlled. All holding brakes can be used up to 2 A. To operate the brake, it is necessary to connect the power supply voltage for the brake separately at the option module brake control. In this case, a regulated power supply is required whose rated value (to balance the voltage drop in the supply cable for the 24 V DC motor brake coil) can be set to 26 V (e.g. SITOP modular).

Table 7-17 Overview of the Safe Brake Relay interfaces

Type	Number
Connection for the solenoid of the motor brake	1
Connection for a 24 V DC power supply	1
Connection for the pre-fabricated (CTRL) to the Power Module, Blocksize format	1

The Safe Brake Relay is shipped with the pre-fabricated cable to connect to the Power Module and all of the customer connectors.

7.5.2.1 Safety Information

Note

A regulated DC power supply is required to operate motors with a built-in holding brake. The power supply is supplied via the internal 24 V busbars. The voltage tolerances of the motor holding brakes and the voltage drops of the connection cables must be taken into account.

The DC power supply should be set to 26 V. This ensures that the power supply for the brake remains within the permissible range when the following conditions are fulfilled:

- Using Siemens three-phase motors
- Using Siemens MOTION-CONNECT power cables
- Motor cable lengths: max. 100 m

7.5.2.2 Interface description

Figure 7-10 Interface description: Safe Brake Relay

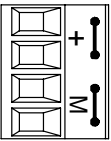

Figure 7-11 Connection example: Safe Brake Relay

Electronics power supply X524

7.5.2.4 Mounting

The Safe Brake Relay can be mounted below the Power Module on the Screening Kit.

Figure 7-13 Mounting the Safe Brake Relay on the Screening Kit (frame size FSA)

Figure 7-14 Mounting the Safe Brake Relay on the Screening Kit (frame sizes FSB and FSC)

7.5.2.5 Technical data

Safe Brake Relay	
Power supply	20.4 to 28.8 V DC Recommended nominal value of the power supply 26 V DC (to equalize and compensate for the voltage drop along the feeder cable to the 24 V DC solenoid of the motor brake)
Max. permissible current drain of the motor brake	2 A
Max. current requirements (at 24 V DC)	0.05 A + the current drain of the motor brake
Max. connectable cross section	2.5 mm ²
Weight, approx.	0.17 kg

Accessories

8.1 DRIVE-CLiQ cabinet gland

8.1.1 Description

The DRIVE-CLiQ cabinet gland is used to connect two DRIVE-CLiQ cables and can be installed in a cabinet panel.

At the interface outside the cabinet, a DRIVE-CLiQ connection is implemented with degree of protection IP67 acc. to EN 60529; however, on the other hand inside the cabinet, a connection with degree of protection IP20 or IPXXB acc. to EN 60529. The interface between the cabinet panel and DRIVE-CLiQ cabinet gland should have degree of protection IP54 acc. to EN 60529.

In addition to the data lines, the power supply contacts of DRIVE-CLiQ are also routed via the coupling.

8.1.2 Safety Information

Note

Only Siemens cables should be used for DRIVE-CLiQ connections.

8.1.3 Interface description

8.1.3.1 Overview

Figure 8-1 DRIVE-CLiQ cabinet gland

Figure 8-3 Cut-out for the cabinet

8.1.5 Mounting

Figure 8-4 DRIVE-CLiQ cabinet gland

Installation

1. Make an opening in the cabinet panel according to the Chapter "Dimension drawing" for the DRIVE-CLiQ cabinet gland.
2. Insert the components from the outer side of the cabinet through the opening in the cabinet.
3. Secure the DRIVE-CLiQ cabinet gland to the outer cabinet panel using two M3 screws and two nuts. In order to ensure good electromagnetic compatibility, a good electrical connection must be established between the DRIVE-CLiQ cabinet gland and the cabinet panel.

8.1.6 Technical data

Table 8-1 Technical data

8.3 Screening Kit

Shielding methods

A Screening Kit is available as option for all frame sizes to connect the shield. This Screening Kit is used to connect the shield of power cables. For frame sizes FSA to FSC, the Screening Kit is directly mounted on the electrical cabinet panel and for frame sizes FSD to FSF, it is screwed to the Power Module.

9

9.1 Information

9.1.1 General

The SINAMICS S components are designed in accordance with degree of protection IP20 or IPXXB acc. to EN 60529 and as open-type devices to UL 50. This ensures protection against electric shocks. To ensure protection against mechanical stress and climatic conditions too, the components should only be operated in housing/cabinets/rooms that fulfill at least degree of protection IP54 and, as enclosure types, are designed to UL 50.

Prefabricated MOTION-CONNECT cables are recommended.

Note for the safety functions of Safety Integrated:

The components must be protected against conducted contamination (e.g. by installing them in a cabinet with degree of protection IP54).

Provided that conducted interference can be prevented at the installation site, the degree of protection for the cabinet can be decreased accordingly.

Low-voltage switchgear and controlgear assemblies

Part 1: Type-tested and partially type-tested low-voltage switchgear assemblies

If the SINAMICS S drive line-up is used for the electrical equipment of machines, the applicable requirements of EN 60204-1 must also be adhered to.

Safety of machinery

Electrical equipment of machines

Part 1: General requirements

All information for device selection in this section applies to

- Operation in a TN system
- Operating voltage range 1-ph. 200 V AC to 3-ph. 440 V AC

 **DANGER**

If the shielding procedures described and the specified cable lengths are not observed, the machine may not operate properly.

9.1.2 Safety information

Note

When installing the equipment in cabinets, the ventilation slots must be covered to prevent drill swarf, wire end ferrules, and the like from falling into the housing.

Safety regulations governing shock protection must be observed. See also EN 60204–1.

CAUTION

To ensure that the encoder system works properly, you are advised to use the original Siemens accessories from catalog PM 21.

Only motors with a safe electrically isolated holding brake may be connected. The brake conductors must also be safely electrically isolated.

If the motor power cable is connected to intermediate terminals, the power cables and brake cables must be routed apart (≥ 300 mm).

After an intermediate terminal (e.g. due to a terminal block), it is best to continue routing using the approved MOTION-CONNECT cable.

CAUTION

The conductor pair for the motor holding brake must be themselves shielded (braided shield). For MOTION-CONNECT cables, this is provided by the inner shield.

WARNING

Cable shields and unused conductors of power cables (e.g. brake conductors) must be connected to PE potential.

Non-observance can cause lethal shock voltages.

 **DANGER**

To protect against electric shock the components should only be operated in closed electrical operating areas or in cabinets. Furthermore, an internal protective conductor connection of the components is absolutely essential.

The components generate high leakage currents in the protective conductor. In order to ensure protection against electric shocks if the external protective conductor is interrupted, one of the following measures must be implemented for the external connection:

- stationary connection and protective conductor connection by means of $\geq 10 \text{ mm}^2$ Cu or $\geq 16 \text{ mm}^2$ Al
- stationary connection and installation of a second protective conductor with the same cross-section as the first protective conductor.
- stationary connection and automatic shutdown of the power supply if the protective conductor is interrupted
- Connection with a plug connector for industrial applications according to EN 60309 and a minimum protective conductor cross-section of $\geq 2.5 \text{ mm}^2$ Cu as part of a multi-core supply cable with appropriate strain relief.

9.2 Selection of Devices Required for Operating SINAMICS

9.2.1 General

The following components are required to be connected to the line supply:

- Line disconnecting device
- Line fuse
- Line contactor (this is required for electrical isolation)
- Line filter (optional for Power Module PM340, frame size FSA)
- Line reactor (refer to Chapter Line supply connection)

To protect the units against line-side surge voltages, you are advised to install an overvoltage protection device directly at the infeed point (upstream of the main switch). To fulfill the requirements of CSA C22.2 no. 14-05, surge protection is essential. For examples of suitable voltage surge arresters, see www.raycap.com (for example)

9.2.2 Information about line disconnecting devices

The line disconnecting device for the electrical equipment may be used for correct isolation of the drive line-up from the power supply. This line disconnecting device must be designed for the electrical equipment of machines in accordance with the requirements of EN 60204-1, Section 5.3. The relevant technical specifications must be taken into consideration for the purpose of selecting the device. Other consumers of the electrical equipment must also be taken into consideration when the device is selected.

The accessories required for the line disconnecting device must be selected from the manufacturer catalogs. See also catalog PM 21.

9.2.3 Over current protection using line fuses or circuit-breakers

The cables for the drive line-up power supply must be protected against over currents. NH, D, and DO-type fuses with a gL characteristic or suitable circuit-breakers can be used for this purpose.

Note

The devices can be connected to line supplies up to 480 V_{AC}, which can supply a maximum of 36 kA symmetrical ("uninfluenced current" acc. to EN 60269-1).

 WARNING
--

During operation from networks with low short-circuit power (e.g. trial operation, operation with isolating transformer), the fuses must be designed in such a way that, if a fault occurs, the line fuses trip after 0.4 s with mobile equipment and after 5 s with stationary equipment to provide protection against electric shock after indirect contact and in the event of short-circuits.

For further information: See catalog PM 21.

9.2.4 Line filter

A separate line filter (see catalog) must be used for the SINAMICS S120 drive line-up.

NOTICE

An additional line filter must be used to suppress interference in other loads. To prevent mutual interference, this line filter must not be equipped with line-side capacitors with respect to ground. Filter series B84144A*R120 (EPCOS) is recommended.
--

In conjunction with line reactors and a systematic plant configuration, line filters limit the conducted interference emitted by the power modules to the limit values of category C2 to EN 61800-3. Line filters are only suitable for direct connection to TN systems.

Note

According to product standard IEC61800-3 RI suppression commensurate with the relevant operating conditions must be provided and is a legal requirement in the EU (EMC Directive). Line filters and line reactors are required for this purpose. The use of filters of other makes can lead to limit value violations, resonances, overvoltages and irreparable damage to motors or other equipment. The machine manufacturer must provide verification that the machinery to be operated with the drive products and the installed suppression elements, e.g. line filters, are CE/EMC-compliant before the machines are approved for delivery.

9.2.5 Line Contactors

Line contactors are required to provide electrical isolation between the drive line-up and the line supply.

When selecting a line contactor, the characteristic values in the technical data apply. The cable routing, the bundling factor and the factor for the ambient temperature according to EN 60204-1 must be taken into account when dimensioning the various cables.

Note

To limit the switching overvoltage, the contactor coil must be connected to an overvoltage limiter (e.g. flywheel diode or varistor).

 CAUTION
--

Line contactors must not be switched under load.
--

When the digital output is used to control the line contactor, its making/breaking capacity must be taken into account.

9.3 24 V DC Supply Voltage

9.3.1 General

The 24 V DC voltage is required for the power supply of:

1. The load voltage of the Control Unit digital outputs.
The Control Units are supplied with power via the PM-IF. 24 V must also be connected in the following cases:
 - Commissioning / diagnostics when the Power Module power supply is switched-out.
 - Using the digital outputs CU310
2. The electronics of the Sensor Module
3. The Safe Brake Relay (motor holding brake)

Other loads can be connected to these power supply units if they are separately protected from over current.

Note

The user should provide the electronics power supply as described in Chapter "System data" in this documentation.

When connecting to a "DC power supply" in the sense of EN 60204-1:1997, Chapter 4.3.3, functional faults can occur due to the voltage interruptions that are permitted there.

NOTICE

If other consumers are connected to the power supply, connected inductance devices (contactors, relays) must be fitted with suitable overvoltage protection circuits.

NOTICE

A regulated DC power supply is required to operate motors with a built-in holding brake. The power is supplied via the 24 V connection (Safe Brake Relay). The voltage tolerances of the motor holding brakes and the voltage drops of the connection cables must be taken into account.
--

The DC power supply should be set to 26 V. This ensures that the power supply for the brake remains within the permissible range when the following conditions are fulfilled:

- | |
|--|
| <ul style="list-style-type: none">• Using Siemens three-phase motors• Using Siemens MOTION-CONNECT power cables• Motor cable lengths: max. 100 m |
|--|

9.3.2 Selecting power supply units

You are advised to use the devices in the following table. These devices meet the applicable requirements of EN 60204-1.

Table 9-1 Recommended SITOP Power

Rated output current [A]	Input voltage range [V]	Short-circuit current [A]	Order No.
5	2 AC 85-132/170 – 550	5,5	6EP1333-3BA00
10	2 AC 85-132/176 – 550	30 for 25 ms	6EP1334-3BA00
20	3-ph. 320 – 550 V AC	23	6EP1336-3BA00
40	3-ph. 320 – 550 V AC	46	6EP1337-3BA00

Table 9-2 Recommendation for Control Supply Module

Rated output current [A]	Input voltage range [V]	Short-circuit current [A]	Order No.
20	3-ph. 380 V AC -10% (-15% < 1 min) to 3-ph. 480 V AC+10% DC 300 – 800	< 24	6SL3100-1DE22-0AA0

See catalog PM 21.

 WARNING
When an external power supply is used, e.g. SITOP, the ground potential must be connected to the protective conductor system (DVC A).

9.3.3 24 V component current consumption

A separate 24 V power supply must be used for the SINAMICS S120 drive line-up.

The following table can be used to calculate the 24 V DC power supply. The values for typical current consumption are used as a basis for configuration.

Table 9-3 Overview of 24 V DC current consumption

Component	Typical current consumption [A _{DC}]
CU320	0.8
CU310 DP for each digital output	0.8
CU310 PN for each digital output	0.8
CUA31 for each digital output	0.15
DRIVE-CLiQ (e.g. motors with DRIVE-CLiQ interface)	Typ. 0.25, max. 0.45
Brake (e.g. motor holding brake)	Typ. 0.4 to 1.1; max. 2
Sensor Module Cabinet	
SMC10	0.2
SMC20	0.2
Sensor Module External	
SME20	0.11
SME25	0.11
SME120	0.16
SME125	0.16

9.3.4 Over current Protection

Cables on both the primary and the secondary side of the power supply unit must be protected from over current. Primary side protection must be implemented according to the manufacturer's instructions. Secondary side protection must be rated to deal with the actual conditions. In particular:

- Loading due to loads, possibly the simultaneity factor in response to machine operation
- Current carrying capacity of the conductors used and cables in normal and short-circuit conditions
- Ambient temperature
- Cable bundling (e.g. laying in a common duct)
- Cable laying method to EN 60204-1

EN 60204-1, Section 14, can be used to determine the over current protection devices.

Circuit-breakers from the Siemens LV 1 and LV 1T catalogs are recommended as over current protection devices on the primary side, and miniature circuit-breakers or SITOP select 6EP1961-2BA00 as over current protection devices on the secondary side. The miniature circuit-breakers can also be selected from the Siemens LV 1 and LV 1T catalogs.

Miniature circuit-breakers are recommended as over current protective device for cables and busbars. The ground potential M must be connected to the protective conductor system (DVC A).

When selecting the circuit-breaker, the following standards must be carefully observed:

EN 61800-5-1, EN 60204-1, IEC 60364-5-52, IEC 60287-1 to -3, EN 60228 and UL 508C.

In so doing, the following conditions for the conductors/cables must be carefully taken into consideration:

- Ambient temperature 55 °C
- Limiting conductor temperature ≥ 75 °C for operation with the rated load current
- Cable length max.:
 - 10 m for the supply supply cables
 - 30 m for signal lines

In addition, the conductors/cables should be routed so that

- Max. 1 conductor pair is bundled, and
- The 24 V conductors/cables must be routed separately from other cables and conductors that can conduct operating currents.

9.4 Arrangement of components and equipment

Table 9-4 MCBs by conductor cross-section and temperature

Conductor cross-section	Max. value up to 40 °C	Max. value up to 55°C
1.5 mm ²	10 A	6 A
2.5 mm ²	16 A	10 A
4 mm ²	25 A	16 A
6 mm ²	32 A	20 A

The trip characteristic of the MCBs must be selected to match the loads to be protected and the max. current provided by the power supply unit in the event of a short-circuit.

9.4 Arrangement of components and equipment

9.4.1 General

The arrangement of the components and equipment takes account of

- Space requirements
- Cable routing
- Bending radiuses of the connection cables
MOTION-CONNECT lines, see D21.1 catalog
- Heat dissipation
- EMC

Components are usually located centrally in a cabinet.

Always observe the mounting clearances necessary above and below the components.

9.4.2 Mounting

The components should be mounted on a conductive mounting surface to ensure low impedance between the component and the mounting surface. Mounting plates with a galvanized surface are suitable.

Figure 9-1 Mounting the CU310 onto the Power Module PM340 (frame size FSD)

Wiring rules for DRIVE-CLiQ

Refer to /IH1/ SINAMICS Commissioning Manual.

9.5 Information about Electromagnetic Compatibility (EMC) and Cable Routing

9.5.1 General

Requirements to implement EMC are listed in EN 61000-6-2, EN 61000-6-4, EN 61800-3, EN 60204-1 and in the EMC Design Directives - Order No. 6FC5297-□AD30-0AP□. Conformance with the EMC Directive of the EC can be secured by following the measures described in the EMC Design Directives.

When mounting components in cabinets, in order to fulfill the EMC directive, the following conditions must be additionally observed:

- Connected to TN line supply systems with grounded neutral point
- SINAMICS line filter (optional for frame size FSA)
- Observance of information about cable shielding and equipotential bonding
- Only the recommended Siemens power and signal cables are used
- Only cables from Siemens may be used for DRIVE-CLiQ connections.

For MOTION-CONNECT cables see catalog D21.1

CAUTION

If couplings or cabinet glands are needed for the DRIVE-CLiQ connections, only the DRIVE-CLiQ coupling and DRIVE-CLiQ cabinet gland, described in the Chapter Accessories, may be used.

DANGER

If the shielding procedures described and the specified cable lengths are not observed, the machine may not operate properly.

9.5.2 Cable Shielding and Routing

In order to comply with the EMC requirements, certain cables must be routed apart from other cables and from certain components. To full EMC requirements, the following cables must be used with shields:

- Power supply cables from line filter via line reactor to Power Module
- All motor cables (if necessary, including cables for motor holding brake)
- Cables for "fast inputs" of the Control Unit
- Cables for analog direct voltage/current signals
- Signal cables for sensors
- Cables for temperature sensors

A suitable PE conductor must be connected to all devices in protection class I.

Alternative measures (e.g. routing behind mounting plates, suitable clearances) can also be used provided they have similar results. This excludes measures that relate to the design, installation, and routing of motor power cables and signal cables. If non-shielded cables are used between the line connection point and line filter, make sure that no interfering cables are routed in parallel.

The cable shields must be connected as close to the conductor terminal connections as possible to ensure a low-impedance connection with cabinet ground.

Figure 9-2 Shielding of a Power Module PM340

1. Line supply input
2. Motor cable
3. Rear metal panel
4. Use suitable clamps/clips to reliably connect the shield of the motor and field cable to the rear metal panel.
5. Shielded cable

Alternatively, the cable shields can be connected to them metal mounting plate using pipe clamps and serrated rails. The cable length between the shield contact point and the terminals for cable conductors must be kept as short as possible.

Shield connection plates with pre-prepared clip contacts are available for connecting the shields for power cables of Power Modules.

All cables inside the cabinet must be connected as closely as possible to parts connected with cabinet ground, such as a mounting plate or cabinet wall. Ducts made of sheet steel or routing cables between between steel sheets (e.g. between the mounting plate and back wall) should provide adequate shielding.

Avoid, where possible, routing non-shielded cables, connected to the drive line-up, in the immediate vicinity of noise sources, e.g. transformers. Signal lines (shielded and non-shielded) connected to the drive line-up, must be routed as far as possible away from strong external magnetic fields (e.g. transformers, line reactors). In both cases, a distance of ≥ 300 mm is usually sufficient.

Signal and DC power supply cables

Operating non-shielded signal and DC power supply cables (e.g. 24 V externally supplied):

- DC power supply cables: Max. permissible length: 10 m
- Non-shielded signal cables: Max. permissible length: 30 m (without additional wiring)

For greater lengths, suitable wiring must be connected by the user to provide overvoltage protection. For example:

Table 9-5 Recommendations for overvoltage protection

DC power supply	24 V signal cables
Weidmüller Type no.: PU DS 24V 16A	Weidmüller Type no.: MCZ OVP TAZ
Weidmüller GmbH & Co. KG An der Talle 89 33102 Paderborn Tel. 05252/960-0 Fax 05252/960-116 http://www.weidmueller.com	

CAUTION

The connected signal and power cables must not cover the ventilation slots.

CAUTION

Non-shielded signal cables must not be routed parallel to power cables.

9.5.3 Equipotential bonding

The SINAMICS S drive system is designed for use in cabinets with a PE conductor connection.

The machinery construction OEM must carefully ensure that all of the conditions regarding the assignment of the ground cable, ground connecting cables, protective conductor and potential bonding cable connections and terminals are clearly specified in his Technical User/Manufacturer Documentation, are clearly specified (this is especially important if there are several protective conductor/potential bonding conductor connections/terminals in the unit). It is especially important to note that the connections for potential bonding cables that exist in parallel to connections for protective connecting cables may not be used to loop-through the protective connecting cable.

If the drive line-up is arranged on a common unpainted metal-surfaced mounting plate, e.g. with a galvanized surface, no additional equipotential bonding is needed within the drive line-up as

- All parts of the switchgear assembly are connected to the protective conductor system.
- The mounting plate is connected with the external PE conductor by means of a finely-stranded copper conductor with a cross-section of 16 mm², including the outer conductor. From a cross-section of 25 mm² copper, the outer cross-section of the finely-stranded conductor is halved.

For other installation methods, equipotential bonding must be implemented using conductor cross-sections as stated in the second item in the list or at least equal to the conductance.

If components are mounted on DIN rails, the data listed in the second item applies for equipotential bonding. If only smaller connection cross-sections are permissible on components, the largest must be used (e.g. 6 mm² for TM31 and SMC). These requirements also apply to distributed components located outside the cabinet.

CAUTION

An equipotential bonding conductor with a cross-section of at least 25 mm² must be used between components in a system that are located a considerable distance from each other. If an equipotential bonding conductor is not used, leakage currents that could destroy the Control Unit or other PROFIBUS nodes can be conducted via the PROFIBUS cable.

9.6 Connection Methods

9.6.1 Screw terminals

Connectable conductor cross-sections of screw terminals

Table 9-6 Screw terminals

Screw terminal type			
1	Connectable conductor cross-sections	Flexible With wire end ferrule, without plastic sleeve With wire end ferrule, with plastic sleeve	0.14 mm ² to 1.5 mm ² 0.25 mm ² to 1.5 mm ² 0.25 mm ² to 0.5 mm ²
	Insulation stripping length	7 mm	
	Tool	Screwdriver 0.4 x 2.0 mm	
	Tightening torque	0.22 to 0.25 Nm	
2	Connectable conductor cross-sections	Flexible With wire end ferrule, without plastic sleeve With wire end ferrule, with plastic sleeve	0.2 mm ² to 2.5 mm ² 0.25 mm ² to 1 mm ² 0.5 mm ² to 1 mm ²
	Insulation stripping length	7 mm	
	Tool	Screwdriver 0.6 x 3.5 mm	
	Tightening torque	0.5 to 0.6 Nm	

9.7 Information on cabinet cooling

9.7.1 General

Electrical cabinets can be cooled, using among other things the following:

- filtered fans
- heat exchangers or
- cooling units.

The decision in favor of one of these methods will depend on the prevailing ambient conditions and the cooling power required.

The air routing within the electrical cabinet and the cooling clearances specified here must be observed. No other components or cables must be located in these areas.

CAUTION

If you do not observe the guidelines for installing SINAMICS equipment in the cabinet, this can reduce the service life of the equipment and result in premature component failure.

You must take into account the following specifications when mounting/installing SINAMICS components:

- Cooling clearance
- Cable routing
- Air guidance, air-conditioner

Table 9-7 Cooling clearances around the components

Component	Clearance above and below in mm and (inches)	Lateral clearance in mm and (inches)
CU310 DP	50 (1.97)	0
CU310 PN	50 (1.97)	0
CUA31	50 (1.97)	0
SMCxx	50 (1.97)	0
Line filters	100 (3.93)	
Line reactor	100 (3.93)	0
PM340 blocksize, frame size FSA	100 (3.93)	30 (1.18)
PM340 blocksize, frame size FSB	100 (3.93)	40 (1.57)
PM340 blocksize, frame size FSC	125 (4.92)	50 (1.97)
PM340 blocksize, frame sizes FSD and FSE	300 (11.81)	0
PM340 blocksize, frame size FSF	350 (13.77)	0

Figure 9-3 Cooling clearances

9.7.2 Ventilation

The SINAMICS equipment is ventilated separately by means of integrated fans and is in some cases cooled by means of natural convection.

The cooling air must flow through the components vertically from bottom (cooler region) to top (region heated by operation).

If filtered fans, heat exchangers, or air conditioners are used, you must ensure that the air is flowing in the right direction. You must also ensure that the warm air can escape at the top. The cooling clearance above and below must be observed.

Note

Cables must not be routed on the components; the ventilation meshes must not be covered.

Cold air must not be allowed to blow directly onto electronic equipment.

Note

The distance between the blow-out aperture of the air conditioner and the electronic equipment must be at least 200 mm.

Figure 9-4 Examples of cabinet ventilation

CAUTION

The air guidance and arrangement of the cooling equipment must be chosen in such a way as to prevent condensation from forming.

If necessary, cabinet enclosure heating may have to be installed.

If air conditioners are used, the relative air humidity of the expelled air increases as the air in the air conditioner cools and may exceed the dew point. If the relative humidity of the air entering the SINAMICS equipment is over 80% for an extended period of time, the insulation in the equipment may fail to function properly due to electrochemical reactions (refer to System Overview). Using air baffle plates, for example, you must ensure that the cold air expelled from the air conditioner mixes with warm air in the cabinet before it enters the equipment. This reduces the relative air humidity to uncritical values.

9.7.3 Power Loss of Components in Rated Operation

The following table shows the power loss for components. The characteristic values apply for the following conditions:

- Line supply voltage for Power Modules 1-ph. 200 V AC to 3-ph. 380 V to 480 V AC $\pm 10\%$
- Pulse frequency of the Power Modules 4 kHz
- Rated pulse frequency of the Power Modules 8 kHz
- Operating components at their rated power

Table 9-8 Overview of power losses

	Unit	Power loss
Control Units		
CU320	W	20
CU310 DP	W	20
CU310 PN	W	20
CUA31	W	7.2

Line filter for Power Modules Blocksize	W	Refer to Line filter, Chapter "Technical data".
PM340	W	Refer to Power Modules, Chapter "Technical data".
Sensor Modules		
SMC10	W	< 10
SMC20	W	< 10

Cooling circuit and coolant properties

10.1 Cooling circuit requirements

Technical cooling circuits can be divided into three systems:

1. Closed cooling circuits (recommended)

In closed systems, the circuit water is separated from the surrounding atmosphere, which prevents the ingress of oxygen. The coolant is only routed through the SINAMICS devices, the components required for heat dissipation and, if necessary, a motor. The heat is dissipated to the atmosphere indirectly by means of heat exchangers. The system should ideally function without losing any circuit water and, once filled, should not require any added water. The composition of the cooling water can be adjusted as required (e.g. by using desalinated water and adding anti-corrosion agents). It either does not change at all during operation, or changes only in a defined manner.

The closed cooling circuit is recommended as a standard solution.

2. Open cooling circuit

The coolant is routed not only through the SINAMICS devices and components required for heat dissipation, but also through external devices.

The heat given off to the circuit water evaporates via a cooling tower. This evaporation causes the circuit water to become more concentrated (densification) because water molecules escape while dissolved substances remain in the circuit water. During operation, therefore, the composition of the water changes significantly, which means that it must be monitored and topped up continuously.

Open cooling circuits are permitted.

3. Semi-open cooling circuit

Oxygen can only enter the coolant via the pressure compensator. Otherwise, see 1. Semi-open cooling circuits are permitted.

A closed cooling circuit with a membrane-pressure compensator (MAG), safety valve (SV) and heat exchanger (WT), which couples the cooling circuit with an external re cooler, is recommended (see also "Materials and water composition").

The liquid-cooled Power Modules are designed to be connected in parallel to the cooling circuit, whereby the pressure drop in the joint supply and return lines is to be kept at negligible levels by choosing a sufficiently large pipe diameter. The differential pressure between the supply (P1) and return (P2) must remain between 70 kPa and 200 kPa. This ensures that each of the connected devices receives the required cooling liquid flow rate. Pressure P1 and P2 with respect to the atmosphere must not exceed 600 kPa.

Figure 10-1 Example: Closed cooling circuit

$P1 - P2 = 70 \text{ kPa} \dots 200 \text{ kPa}$ (in operation)

$P2 \leq P1 \leq 600 \text{ kPa}$

A filter must be installed in the cooling circuit supply line to prevent foreign particles from being washed in. Recommended nominal filter mesh: 100 μm .

The liquid-cooled Power Modules should be connected to the cooling circuit by means of shut-off valves so that they can be disconnected from the cooling circuit for servicing or repair without the need to empty the entire cooling system. A cooling water hose (EPDM) can be used to connect the shut-off valve and unit. Coolant connections A and B must never be closed if cooling liquid is still present in the device. Reason: if the cooling fluid expands due to heating, the pressure can build up beyond permissible levels and cause the integrated heat exchanger to burst.

When the pump is switched off, static pressure occurs in the system. The static pressure can be influenced by the primary pressure of the membrane-pressure compensator (MAG) and should be at least 30 kPa at the intake side of the pump. If the static pressure is too low, the pump may be damaged due to cavitation during operation. If necessary, note any differing minimum pressure values from the pump manufacturer. When components are installed at different heights, the geodesic pressure caused by the height difference must be taken into account (1 m height difference corresponds to 10 kPa).

When the pump is switched on, a (location-dependent) flow pressure is present in the cooling circuit, which must be determined from the pump characteristic curve and the volume-flow-dependent pressure drop. For the pressure drop for the Power Modules, characteristic curves are specified to which the pressure drop in the filter and, if necessary, further pressure drops in connection pipes must be added. Up to 50 kPa must be added for the pressure drop in a (contaminated) filter and in connection pipes. The intersection of the pump characteristic curve and the pressure drop of the whole system yields the volume flow V_n of the coolant at this operating point.

Figure 10-2 Pump characteristic curve

10.1.1 Pressure

The maximum system pressure is 600 kPa. The lowest possible pressure should be selected to allow pumps with a flat characteristic to be used.

The maximum permissible differential pressure for a heatsink is 200 kPa.

The layout must be selected so that the total length of supply and drain pipe is equal for each SINAMICS unit or motor.

Water cooling systems with series-connected modules and/or modules and motors are not permitted because the increased volumetric flow increases the risk of cavitation and abrasion. This arrangement is only acceptable if the pressure difference for each device does not exceed 200 kPa.

10.1.2 Installation

The following requirements must be observed during installation:

- Seals must be free of chloride, graphite, and rust.
- Permissible sealing materials: Viton, AFM34, and EPDM.

Note

Teflon-based seals are not permitted.

To ensure mechanical decoupling, the devices should be connected by means of hoses.

Recommendation for hose type:

- EPDM hoses with an electrical conductivity $>10^9$ ohms, e.g. Semperflex FKD supplied by Semperit, or
- DEMITEL made of PE / EPDM supplied by Telle
- Secure with clips that comply with DIN2871, available from Telle, for example.

Recommendation for installation:

- A closed stainless steel cooling circuit is recommended to ensure the longest possible service life of the cooling unit.
- Cooling circuit pipes, fittings made of ABS, stainless steel (Nirosta) or common steel (ST37).
- To prevent blockages and corrosion, you are advised to install a flushback filter in the circuit (so that residues can be rinsed out when the system is running).

10.1.3 Preventing cavitation

The following applies to all cooling circuits:

- The cooling circuit must always be designed in such a way that the pressure compensator is located on the suction side of the pump (if possible, directly on the pump).
- The minimum pressure on the suction side of the pump must be approximately 30 kPa, or the geodesic height from the reservoir to the pump suction side must be > 3 m.
- The pressure drop across a SINAMICS device must not exceed 200 kPa in continuous operation, otherwise the high volumetric flow can increase the risk of cavitation and/or abrasion damage.
- The guidelines provided in "Information about configuring cooling circuits" below regarding series connections and maximum pressure must also be followed.

10.1.4 Information about configuring cooling circuits

The operating pressure must be set according to the flow conditions in the supply and return lines of the cooling circuit. The required coolant flow rate per time unit must be set according to the technical specifications of the equipment. The units are normalized to a rated pressure of 70,000 Pa (for coolant type H₂O) via an orifice.

If a mixture of Antifrogen N and H₂O is used as a coolant, the rated pressure must be calculated according to the mixing ratio. The following table specifies the pressure drop across components at different coolant temperatures for a coolant with mixing ratio 45 % Antifrogen N.

Table 10-1 Pressure drop for various coolant temperatures

PM340 Liquid Cooled	dV/dt H ₂ O [l/min]	dP H ₂ O [Pa]	dP Antifrogen N 45 % 0 °C [Pa]	dP Antifrogen N 45 % 20 °C [Pa]	dP Antifrogen N 45 % 45 °C [Pa]	dP Antifrogen N 45 % 50 °C [Pa]
Power Module, frame size FSD	8	66700	115300	92700	76700	74700
Power Module, frame size FSE	8	69100	119500	96000	79400	77300
Power Module, frame size FSF	8	69500	120200	96600	79900	77800

The maximum permissible pressure (with respect to the atmosphere) in the heatsink and, in turn, the cooling circuit must not exceed 600 kPa. If a pump whose maximum pressure exceeds this value is used, steps must be taken (e.g. safety valve $p \leq 600$ kPa, pressure control) to ensure that the maximum pressure limit is not exceeded.

The lowest possible differential pressure between the coolant in the supply and return lines should be selected to allow pumps with a flat characteristic to be used.

10.1 Cooling circuit requirements

The maximum differential pressure across a heat sink is 200 kPa. Higher differential pressures significantly increase the risk of cavitation and abrasion.

Figure 10-3 Pressure difference as a function of volumetric flow

Water cooling systems with series-connected SINAMICS devices cannot be recommended for the following reasons:

- The risk of cavitation and abrasion increases as a result of the high total volumetric flow.
- SINAMICS S120 cannot be connected in series because the total volumetric flow needed for any series-connected configuration requires system pressures in the range of 600 kPa or above.

The characteristic curves for the pressure drop across the heatsinks as a function of volumetric flow vary depending on the temperature and the Antifrogen N / water coolant mix.

Figure 10-4 Pressure difference as a function of the volumetric flow for Power Modules PM340 Liquid Cooled, frame sizes FSD to FSF

Recommendation for dimensioning the cooling circuit:

The differential pressure between the supply and return lines should be selected so that:

$$\sum dP_i < dP_{\text{Syst}} < \sum dP_i + 30 \text{ kPa}$$

The individual pressure drops P_i represent the pressure drops of components (heat exchanger, piping, 70 kPa for the SINAMICS units connected in parallel, valves, dirt traps, pipe bends, etc.).

Coolant pipes must be routed with extreme care. The pipes must never come into contact with electrically live components. An insulation clearance of > 13 mm must always be maintained between pipes and live parts. The pipes must be securely mounted and checked for leaks.

10.2 Coolant requirements

Properties of the cooling medium

Water or a water/anti-freeze mixture that meets the relevant requirements can be used as a cooling medium. The cooling medium must be chemically neutral, clean, and not contain any solids.

The cooling water must fulfill the following requirements over the long term:

- Chemically neutral, clean, and free of solids
- Max. inlet temperature: 50 °C
- Max. outlet temperature: 55 °C
- System pressure 600 kPa
- Max. size of any particles transported: 100 µm
- pH value: 6.0 to 8.0
- Chlorides < 200 ppm
- Sulfates < 600 ppm
- Loose materials < 340 ppm
- Total hardness < 170 ppm
- Conductivity value < 500 µs/cm

Note

Normal tap water does not generally fulfill these requirements, although it can be mixed with de-ionized water. Losses must always be replenished with de-ionized water.

Operating pressures must not exceed 600 kPa.

NOTICE

Condensation must not be allowed to form on the SINAMICS S120 equipment as a result of supercooling. The temperature of the cooling water may have to be regulated.

A particle filter (particle size < 100 µm) must be installed in the cooling water circuit.

If there is a risk of frost, preventive measures must be taken during operation, storage, and transportation (e.g. emptying and blowing out with air, additional heating).

The cooling water should be checked 3 months after the cooling circuit is filled for the first time and, subsequently, once a year. If the cooling water becomes cloudy, is colored, or becomes contaminated by mould spores, the cooling circuit must be cleaned and refilled.

An inspection glass should be provided in the cooling circuit to make it easier to check the cooling water.

10.3 Anti-corrosion additives (inhibitors)

Inhibitor without anti-freeze effect

The NALCO 00GE056 inhibitor (Manufacturer: Nalco) must always be used in a mixing ratio of 0.2 % to 0.25 %. A prerequisite for the inhibitor is the specified coolant, which must not contain any magnesium carbonate. Control kits can be ordered from Nalco to check the inhibitor concentration.

10.4 Anti-freeze additives

Anti-freeze protection

Antifrogen N (Manufacturer: Clariant) with a proportion X of $20 \% < X \leq 45 \%$ is the anti-freeze used. Coolants containing 45 % Antifrogen N are anti-freeze-protected down to -30°C .

Antifrogen N contains anti-corrosion inhibitors that permanently protect the metal in the cooling system against corrosion.

It is particularly important to ensure that the proportion of Antifrogen N is always $>20 \%$ when a system is refilled, otherwise the mixture becomes corrosive.

Inhibitors and Antifrogen N must not be mixed.

10.5 Biocide additives (only if required)

Biocide

Closed cooling circuits with soft water ($^{\circ}\text{DH}>4$) are susceptible to microbes. The risk of corrosion caused by microbes is virtually non-existent in chlorinated drinking water systems.

No strain of bacteria can survive if $>20\%$ Antifrogen N is added.

The following types of bacteria are encountered in practice:

- Slime-forming bacteria
- Corrosive bacteria
- Iron-depositing bacteria

The type of bacteria determines the suitability of a biocide. At least one water analysis per year (to determine the number of bacterial colonies) is recommended. Suitable biocides are available, for example, from Nalco (Manufacturer: Nalco).

Note

The type of bacteria determines the biocide.

The manufacturer's recommendations must be followed regarding dosage and compatibility with any inhibitor used.

Biocides and Antifrogen N must not be mixed.

Antifrogen N has a biocidal effect even at the minimum required concentration of $>20\%$.

10.6 Anti-condensation measures

The customer must take measures to protect the devices against condensation.

Condensation occurs when the inlet temperature of the coolant is significantly lower than room temperature (ambient temperature). The permissible temperature difference between coolant and air varies as a function of the relative humidity ϕ of the ambient air. The air temperature at which the aqueous phase precipitates is referred to as the "dew point".

The table below shows the dew points (in °C) for an atmospheric pressure of 100 kPa (\approx installation altitude: 0 to 500 m). If the temperature of the coolant is below the specified value, condensation may occur (i.e. the coolant temperature must always be \geq the dew point temperature).

Table 10-2 Dew point temperature as a function of relative air humidity ϕ and room temperature at an installation altitude of 0 m.

T room [°C]	$\phi=20\%$	$\phi=30\%$	$\phi=40\%$	$\phi=50\%$	$\phi=60\%$	$\phi=70\%$	$\phi=80\%$	$\phi=85\%$	$\phi=90\%$	$\phi=90\%$	$\phi=100\%$
10	<0	<0	<0	0.2	2.7	4.8	6.7	7.6	8.4	9.2	10
20	<0	2	6	9.3	12	14.3	16.4	17.4	18.3	19.1	20
25	0.6	6.3	10.5	13.8	16.7	19.1	21.2	22.2	23.2	24.1	24.9
30	4.7	10.5	14.9	18.4	21.3	23.8	26.1	27.1	28.1	29	29.9
35	8.7	14.8	19.3	22.9	26	28.6	30.9	32	33	34	34.9
38	11.1	17.4	22	25.7	28.8	31.5	33.8	34.9	36	36.9	37.9
40	12.8	19.1	23.7	27.5	30.6	33.4	35.8	36.9	37.9	38.9	39.9
45	16.8	23.3	28.2	32	35.3	38.1	40.6	41.8	42.9	43.9	44.9
50	20.8	27.5	32.6	36.6	40	42.9	45.5	46.6	47.8	48.9	49.9

The dew point also depends on the absolute pressure (i.e. the installation altitude).

The dew points for low atmospheric pressure are lower than those at an altitude of 0 m (i.e. it is always acceptable to calculate the coolant supply temperature for an altitude of 0 m).

For short periods of condensation in Power Modules PM340 Liquid Cooled, framed size FSF, the condensate may be collected inside the components and removed by a hose (see dimensional drawing).

10.7 Equipotential bonding

All components in the cooling system (SINAMICS units, heat exchanger, piping system, pump, pressure compensator, etc.) must be connected to an equipotential bonding system. A copper bar or stranded copper with the appropriate conductor cross-sections must be used for this purpose to eliminate electrochemical processes.

If the installation comprises more than one control cabinet, they must be bolted together with good conductivity (e.g. bolt cabinet cross-beams together directly at several points to establish a conductive connection). This eliminates potential differences and, in turn, the risk of electrochemical corrosion. A PE bar must be installed in every cabinet (including the recooling system) and the individual bars interconnected.

Service and maintenance

11.1 Safety information

 **DANGER**

Only Siemens customer service, repair centers that have been authorized by Siemens or authorized personnel may repair drive equipment. All of the persons involved must have in-depth knowledge of all of the warnings and operating instructions as listed in this Manual.

All damaged parts or components must be replaced only using parts and components that are listed in the relevant spare parts list.

 **DANGER**

Before starting any work, after the specified waiting time has elapsed, carefully measure the voltage! The voltage can be measured between the DC link terminals DCP and DCN and must be below 42.2 V DC.

 **DANGER**

If the auxiliary 230 V AC supplies are present, then a hazardous voltage is present at the components even when the main switch is in the open state.

11.2 Spare parts

Spare parts are available on the Internet at:
<http://support.automation.siemens.com/WW/view/de/16612315>

11.3 Service and maintenance for components, Blocksize format

11.3.1 Replacing hardware components

NOTICE
Hardware components may only be replaced when in the no-voltage state!

The following components can be replaced with replacement/exchange components with the same Order No.:

- Power Modules
- DRIVE-CLiQ components
- Control Units

11.3.2 Replacing the fan

- CU310 DP: The CU310 DP fan must only be replaced by trained personnel who strictly adhere to ESD instructions.
When the fan is replaced, the plastic housing must be removed by releasing all of the catches one after another using a slotted screwdriver. After pressing the release clip, the fan connectors can be removed without the need for any other tools. The fan can then be withdrawn from the front and replaced.
At the same time, a qualified specialist should reset the fan's operating hours counter to "0".
The fan can be ordered as a spare part.
- CU310 PN: The CU310 DP fan must only be replaced by trained personnel who strictly adhere to ESD instructions.
When the fan is replaced, the plastic housing must be removed by releasing all of the catches one after another using a slotted screwdriver. After pressing the release clip, the fan connectors can be removed without the need for any other tools. The fan can then be withdrawn from the front and replaced.
At the same time, a qualified specialist should reset the fan's operating hours counter to "0".
The fan can be ordered as a spare part.
- PM340: For all frame sizes, the fans are accessible from the outside. For frame sizes FSA to FSC, a Phillips screwdriver is required for replacing fans.
The fan can be ordered as a spare part.
- The CUA31 does not have a fan.

Figure 11-1 Replacing the fan for a Power Module PM340, frame size FSA

(tightening torque 0.4 Nm)

Figure 11-2 Replacing a fan for a Power Module PM340, frame sizes FSB and FSC

(tightening torque 0.4 Nm)

Figure 11-3 Replacing a fan for a Power Module PM340, frame sizes FSD and FSE

1. Removing the cover using a suitable tool.
2. Withdraw the two connectors shown and lift-out the fan.
3. Use the new fan and insert both connectors.
4. Close the protective cover.

Figure 11-4 Replacing the fan for a Power Module PM340, frame size FSF

5. Release the screws and remove the cover.
6. Withdraw the two connectors shown and lift-out the fan.
7. Insert the new fan, locate both connectors, close the cover and tighten the screws (tightening torque, 3.0 Nm).

11.4 Service and maintenance for Chassis format components

Maintenance is intended to ensure that the equipment remains in the specified condition. Dirt and contamination must be removed regularly and parts subject to wear replaced.

The following points must generally be observed.

Dust deposits

Dust deposits inside the device must be removed at regular intervals (or at least once a year) by qualified personnel in line with the relevant safety regulations. The device must be cleaned using a brush and vacuum cleaner. Areas that cannot be easily reached must be cleaned with dry compressed air (max. 100 kPa).

Ventilation

The ventilation openings in the device must never be obstructed. The fans must be checked to make sure that they are functioning correctly.

Cable and screw terminals

Cable and screw terminals must be checked regularly to ensure that they are secure in position, and if necessary, retightened. Cabling must be checked for defects. Defective parts must be replaced immediately.

Note

The actual intervals at which maintenance procedures are to be performed depend on the installation conditions (cabinet environment) and the operating conditions.

Siemens offers its customers support in the form of a service contract. For further details, contact your regional office or sales office.

11.4.1 Maintenance

Servicing involves activities and procedures for maintaining and restoring the operating condition of the devices.

Required tools

The following tools are required for replacing components:

- Spanner or socket spanner (w/f 10)
- Spanner or socket spanner (w/f 13)
- Spanner or socket spanner (w/f 16/17)
- Spanner or socket spanner (w/f 18/19)
- Hexagon-socket spanner (size 8)
- Torque wrench up to 50 Nm
- Screwdriver size 1 / 2
- Screwdriver Torx T20
- Screwdriver Torx T30

Tightening torques for current-carrying parts

When securing connections for current-carrying parts (line supply, motor connections, busbars), you must observe the following tightening torques.

Table 11-1 Tightening torques for connecting current-carrying parts

Screw	Torque
M6	6 Nm
M8	13 Nm
M10	25 Nm
M12	50 Nm

11.4.2 Installation equipment

Description

The installation equipment is used to install and remove the power blocks for Power Modules in the Chassis format.

It is used as an installation aid, which is placed in front of and secured to the module. The telescopic guide support allows the withdrawable device to be adjusted according to the height at which the power blocks are installed. Once the mechanical and electrical connections have been removed, the power block can be removed from the module, whereby the power block is guided and supported by the guide rails on the withdrawable devices.

Figure 11-5 Installation equipment

Order No.

Order number for the installation device: 6SL3766-1FA00-0AA0.

11.4.3 Replacing components

11.4.3.1 Safety information

 DANGER
<p>When transporting the devices and replacing components, note the following:</p> <ul style="list-style-type: none">• Some of the devices and components are heavy or top heavy.• Due to their weight, the devices must be handled with care by trained personnel.• Serious injury or even death and substantial material damage can occur if the devices are not lifted or transported properly.

 DANGER
<p>The equipment is operated with hazardous voltages</p> <p>All connection work must be carried-out in a no-voltage condition!</p> <p>All work on the units must be carried out by trained personnel only. Death, serious injury, or substantial material damage can result if these warnings are not taken into account.</p> <p>Work on an open device must be carried out with extreme caution because external supply voltages may be present. The power and control terminals may be live even when the motor is not running.</p> <p>Dangerously high voltage levels are still present in the cabinet up to five minutes after it has been disconnected due to the DC link capacitors. For this reason, the cabinet should not be opened until after a reasonable period of time has elapsed.</p>

11.4.3.2 Replacing the Powerblock, Power Module, frame size FX

Replacing the Powerblock

Figure 11-6 Replacing the Powerblock, Power Module, frame size FX

Preparatory steps

- Disconnect the drive line-up from the power supply.
- Allow unimpeded access to the power block.
- Remove the front cover.

Removal

The steps for the removal procedure are numbered in accordance with the previous diagram.

1. Unscrew the connection to the outgoing motor section (3 screws).
2. Unscrew the connection to the line supply (3 screws).
3. Remove the retaining screws at the top (2 screws).
4. Remove the retaining screws at the bottom (2 screws).
5. Remove the DRIVE-CLiQ cables and connections on –X41 / –X42 (5 plugs).
6. Remove the retaining elements of the electronic module (2 nuts) and carefully remove the electronics module.
When removing the electronics module, 5 additional connectors (2 at the top, 3 at the bottom) must be removed one after the other.
7. Disconnect the plugs for the fiber optic cables and signal cables (5 plugs).
8. Unscrew the two retaining screws for the fan and attach the tool for de-installing the power block at this position.

You can now remove the power block.

 CAUTION
When removing the power block, ensure that you do not damage any signal cables.

Installation

To re-install the fan, carry out the above steps in reverse order.

 CAUTION
You must observe the specified tightening torques. Carefully re-establish the plug connections and ensure that they are secure.

11.4.3.3 Replacing the Powerblock, Power Module, frame size GX

Replacing the Powerblock

Figure 11-7 Replacing the Powerblock, Power Module, frame size GX

Preparatory steps

- Disconnect the drive line-up from the power supply.
- Allow unimpeded access to the power block.
- Remove the front cover.

Removal

The steps for the removal procedure are numbered in accordance with Fig. 8 3.

1. Unscrew the connection to the outgoing motor section (3 screws).
2. Unscrew the connection to the line supply (3 screws).
3. Remove the retaining screws at the top (2 screws).
4. Remove the retaining screws at the bottom (2 screws).
5. Remove the retaining element of the electronic module (1 nut) and carefully remove the electronics module.
When removing the electronics module, 5 additional connectors (2 at the top, 3 at the bottom) must be removed one after the other.
6. Disconnect the connectors for the fiber optic cables (5 plugs) and release the cable connection for the signal cables (2 connectors).
7. Disconnect the plug for the thermocouple.
8. Unscrew the two retaining screws for the fan and attach the tool for de-installing the power block at this position.

You can now remove the power block.

CAUTION

When removing the power block, ensure that you do not damage any signal cables.

Installation

To re-install the fan, carry out the above steps in reverse order.

CAUTION

You must observe the specified tightening torques. Carefully re-establish the plug connections and ensure that they are secure.
--

11.4.3.4 Replacing the fan, Power Module, frame size FX

Replacing the fan

Figure 11-8 Replacing the fan, Power Module, frame size FX

Description

The average service life of the device fans is 50,000 hours. In practice, however, the service life depends on other variables, including ambient temperature and the degree of cabinet protection and, therefore, may deviate from this value.

The fans must be replaced in good time to ensure that the device is available.

Preparatory steps

- Disconnect the drive line-up from the power supply.
- Allow unimpeded access.
- Remove the front cover.

Removal

The steps for the removal procedure are numbered in accordance with the previous diagram.

1. Remove the retaining screws for the fan (2 screws).
2. Disconnect the supply cables (1 x "L", 1 x "N").

You can now carefully remove the fan.

CAUTION
When removing the fan, ensure that the cables are not damaged.

Installation

To re-install the fan, carry out the above steps in reverse order.

CAUTION
You must observe the specified tightening torques. Carefully re-establish the plug connections and ensure that they are secure.

11.4.3.5 Replacing the fan, Power Module, frame size GX

Replacing the fan

Figure 11-9 Replacing the fan, Power Module, frame size GX

Description

The average service life of the device fans is 50,000 hours. In practice, however, the service life depends on other variables, including ambient temperature and the degree of cabinet protection and, therefore, may deviate from this value.

The fans must be replaced in good time to ensure that the device is available.

Preparatory steps

- Disconnect the drive line-up from the power supply.
- Allow unimpeded access.
- Remove the front cover.

Removal

The steps for the removal procedure are numbered in accordance with the previous diagram.

1. Remove the retaining screws for the fan (3 screws).
2. Disconnect the supply cables (1 x "L", 1 x "N").

You can now carefully remove the fan.

CAUTION
When removing the fan, ensure that the cables are not damaged.

Installation

To re-install the fan, carry out the above steps in reverse order.

CAUTION
You must observe the specified tightening torques. Carefully re-establish the plug connections and ensure that they are secure.

Appendix A

A

A.1 List of abbreviations

Note:

The following list of abbreviations contains the abbreviations and their meanings used in the entire SINAMICS user documentation.

Abbreviation	Derivation of abbreviation	Meaning
A		
A...	Alarm	Alarm
AC	Alternating Current	Alternating current
ADC	Analog Digital Converter	Analog digital converter
AI	Analog Input	Analog input
AIM	Active Interface Module	Active Interface Module
ALM	Active Line Module	Active Line Module
AO	Analog Output	Analog output
AOP	Advanced Operator Panel	Advanced Operator Panel
APC	Advanced Positioning Control	Advanced positioning control
AR	Automatic Restart	Automatic restart
ASC	Armature Short-Circuit	Armature short-circuit
ASCII	American Standard Code for Information Interchange	American Standard Code for Information Interchange
ASM	Asynchronmotor	Induction motor
B		
BERO	-	Tradename for a type of contactless proximity switch
BI	Binector Input	Binector input
BIA	Berufsgenossenschaftliches Institut für Arbeitssicherheit	German Institute for Occupational Safety
BICO	Binector Connector Technology	Binector connector technology
BLM	Basic Line Module	Basic Line Module
BO	Binector Output	Binector output
BOP	Basic Operator Panel	Basic Operator Panel

Abbreviation	Derivation of abbreviation	Meaning
C		
C	Capacitance	Capacitance
C...	-	Safety message
CAN	Controller Area Network	Serial bus system
CBC	Communication Board CAN	CAN communication board
CD	Compact Disc	Compact Disc
CDS	Command Data Set	Command data set
CF Card	CompactFlash Card	CompactFlash card
CI	Connector Input	Connector input
CLC	Clearance Control	Clearance control
CNC	Computer Numerical Control	Computer numerical control
CO	Connector Output	Connector output
CO/BO	Connector Output/Binector Output	Connector output/Binector output
COB-ID	CAN Object-Identification	CAN object identification
COM	Common contact of a change-over relay	Common contact of a change-over relay
COMM	Commissioning	Commissioning
CP	Communications Processor	Communications processor
CPU	Central Processing Unit	Central processing unit
CRC	Cyclic Redundancy Check	Cyclic redundancy check
CSM	Control Supply Module	Control Supply Module
CU	Control Unit	Control Unit
D		
DAC	Digital Analog Converter	Digital Analog Converter
DC	Direct Current	Direct current
DCB	Drive Control Block	Drive Control Block
DCC	Drive Control Chart	Drive Control Chart
DCC	Data Cross-Check	Data cross-check
DCN	Direct Current Negative	Direct current negative
DCP	Direct Current Positive	Direct current positive
DDS	Drive Data Set	Drive data set
DI	Digital Input	Digital input
DI/DO	Digital Input/Digital Output	Bidirectional digital input/digital output
DMC	DRIVE-CLiQ Hub Module Cabinet	DRIVE-CLiQ Hub Module Cabinet
DME	DRIVE-CLiQ Hub Module External	DRIVE-CLiQ Hub Module External
DO	Digital Output	Digital output
DO	Drive Object	Drive object
DP	Distributed I/Os	Distributed I/Os
DPRAM	Dual-Port Random Access Memory	Dual-Port Random Access Memory

Abbreviation	Derivation of abbreviation	Meaning
DRAM	Dynamic Random Access Memory	Dynamic Random Access Memory
DRIVE-CLiQ	Drive Component Link with IQ	Drive Component Link with IQ
DSC	Dynamic Servo Control	Dynamic servo control
E		
EASC	External Armature Short-Circuit	External armature short-circuit
EDS	Encoder Data Set	Encoder data set
ELCB	Earth Leakage Circuit Breaker	Earth leakage circuit breaker
ELP	Earth Leakage Protection	Earth leakage protection
EMC	Electromagnetic Compatibility	Electromagnetic compatibility
EMF	Electromagnetic Force	Electromagnetic force
EN	Europäische Norm	European Standard
EnDat	Encoder-Data-Interface	Encoder interface
EP	Enable Pulses	Enable Pulses
EPOS	Einfachpositionierer	Basic positioner
ES	Engineering System	Engineering system
ESB	Ersatzschaltbild	Equivalent circuit diagram
ESD	Electrostatic Sensitive Devices	Electrostatic sensitive devices
ESR	Extended Stop and Retract	Extended stop and retract
F		
F...	Fault	Fault
FAQ	Frequently Asked Questions	Frequently asked questions
FBL	Free Blocks	Free function blocks
FCC	Function Control Chart	Function Control Chart
FCC	Flux Current Control	Flux current control
FD	Function Diagram	Function diagram
F-DI	Failsafe Digital Input	Failsafe digital input
F-DO	Failsafe Digital Output	Failsafe digital output
FEM	Fremderregter Synchronmotor	Separate-field synchronous motor
FEPROM	Flash-EPROM	Non-volatile write and read memory
FG	Function Generator	Function generator
FI	-	Fault current
FO	Fiber-Optic Cable	Fiber optic cable
FPGA	Field Programmable Gate Array	Field Programmable Gate Array
FW	Firmware	Firmware

Abbreviation	Derivation of abbreviation	Meaning
G		
GB	Gigabyte	Gigabyte
GC	Global Control	Global Control Telegram (Broadcast Telegram)
GND	Ground	Reference potential for all signal and operating voltages, usually defined with 0 V (also designated as M)
GSD	Gerätstammdatei	Device master file: describes the features of a PROFIBUS slave
GSV	Gate Supply Voltage	Gate supply voltage
GUID	Globally Unique Identifier	Globally unique identifier
H		
HF	High Frequency	High frequency
HFD	Hochfrequenzdrossel	High-frequency reactor
HMI	Human Machine Interface	Human Machine Interface
HTL	High-Threshold Logic	High-threshold logic
HW	Hardware	Hardware
I		
I/O	Input/Output	Input/Output
I2C	Inter Integrated Circuit	Internal serial data bus
IASC	Internal Armature Short-Circuit	Internal armature short-circuit
ID	Identifier	Identifier
IEC	International Electrotechnical Commission	International standard in electrical engineering
IF	Interface	Interface
IGBT	Insulated Gate Bipolar Transistor	Bipolar transistor with insulated control electrode
IGCT	Integrated Gate-Controlled Thyristor	Semiconductor circuit-breaker with integrated control electrode
IL	Impulslöschung	Pulse suppression
IP	Internet Protocol	Internet Protocol
IPO	Interpolator	Interpolator
IT	Isolé Terré	Insulated three-phase supply system
IVP	Internal Voltage Protection	Internal voltage protection
J		
JOG	Jogging	Jogging
K		
KIP	Kinetische Pufferung	Kinetic buffering

Abbreviation	Derivation of abbreviation	Meaning
Kp	-	Proportional gain
KTY	-	Special temperature sensor
L		
L	-	Formula symbol for inductance
LED	Light Emitting Diode	Light Emitting Diode
LIN	Linearmotor	Linear motor
LR	Lageregler	Position controller
LSB	Least Significant Bit	Least Significant Bit
LSC	Line-Side Converter	Line-Side Converter
LSS	Line Side Switch	Line Side Switch
LU	Length Unit	Length Unit
M		
M	-	Formula symbol for torque
M	Masse	Reference potential for all signal and operating voltages, usually defined with 0 V (also designated as GND)
MB	Megabyte	Megabyte
MCC	Motion Control Chart	Motion Control Chart
MDS	Motor Data Set	Motor data set
MLFB	Maschinenlesbare Fabrikatebezeichnung	Machine-readable product designation
MMC	Man-Machine Communication	Man-Machine Communication
MMC	Micro Memory Card	Micro Memory Card
MSB	Most Significant Bit	Most Significant Bit
MSC	Motor-Side Converter	Motor-Side Converter
MSCY_C1	Master Slave Cycle Class 1	Cyclic communication between master (class 1) and slave
MT	Messtaster	Probe
N		
N. C.	Not Connected	Not connected
N...	No Report	No report or internal message
NAMUR	Normenarbeitsgemeinschaft für Mess- und Regeltechnik in der chemischen Industrie	Standardization association for measurement and control in chemical industries
NC	Normally Closed (contact)	Normally Closed (contact)
NC	Numerical Control	Numerical control
NEMA	National Electrical Manufacturers Association	Standards association in USA
NO	Normally Open (contact)	Normally Open (contact)
O		
OA	Open Architecture	Open Architecture

Abbreviation	Derivation of abbreviation	Meaning
OC	Operating Condition	Operating condition
OEM	Original Equipment Manufacturer	Original Equipment Manufacturer
OLP	Optical Link Plug	Optical link plug
OMI	Option Module Interface	Option Module Interface
P		
p...	-	Setting parameter
PB	PROFIBUS	PROFIBUS
PcCtrl	PC Control	Master control
PD	PROFdrive	PROFdrive
PDS	Power unit Data Set	Power unit data set
PE	Protective Earth	Protective Earth
PELV	Protective Extra Low Voltage	Protective Extra Low Voltage
PEM	Permanenterregter Synchronmotor	Permanent-field synchronous motor
PG	Programmiergerät	Programming device
PI	Proportional Integral	Proportional Integral
PID	Proportional Integral Differential	Proportional Integral Differential
PLC	Programmable Logic Controller	Programmable logic controller
PLL	Phase-Locked Loop	Phase-Locked Loop
PN	PROFINET	PROFINET
PNO	PROFIBUS Nutzerorganisation	PROFIBUS User Organization (PROFIBUS International)
PPI	Point to Point Interface	Point to point interface
PRBS	Pseudo Random Binary Signal	Pseudo Random Binary Signal
PROFIBUS	Process Field Bus	Serial data bus
PS	Power Supply	Power supply
PSA	Power Stack Adapter	Power stack adapter
PTC	Positive Temperature Coefficient	Positive Temperature Coefficient
PTP	Point-To-Point	Point-to-point
PWM	Pulse Width Modulation	Pulse width modulation
PZD	Prozessdaten	Process data
Q		
R		
r...	-	Display parameter (read only)
RAM	Random Access Memory	Read and write memory
RCCB	Residual Current Circuit Breaker	Residual current circuit breaker
RCD	Residual Current Device	Residual current device
RFG	Ramp-Function Generator	Ramp-function generator

Abbreviation	Derivation of abbreviation	Meaning
RJ45	Registered Jack 45	Describes an 8-pole connector system for data transfer with shielded or unshielded multicore copper cables
RKA	Rückkühlanlage	Cooling unit
RO	Read Only	Read only
RPDO	Receive Process Data Object	Receive Process Data Object
RS232	Recommended Standard 232	Interface standard for conducted serial data transfer between a transmitter and a receiver (also designated as EIA232)
RS485	Recommended Standard 485	Interface standard for a conducted differential, parallel and/or serial bus system (data transfer between several transmitters and receivers, also designated as EIA485)
RTC	Real Time Clock	Real time clock
S		
S1	-	Continuous duty
S3	-	Intermittent duty
SBC	Safe Brake Control	Safe brake control
SBH	Sicherer Betriebshalt	Safe Operating Stop
SBR	-	Safe Acceleration Monitor
SCA	Safe Cam	Safe cam
SD Card	SecureDigital Card	Secure Digital Card
SE	Sicherer Software-Endschalter	Safe software limit switch
SG	Sicher reduzierte Geschwindigkeit	Safely reduced speed
SGA	Sicherheitsgerichteter Ausgang	Safety-related output
SGE	Sicherheitsgerichteter Eingang	Safety-related input
SH	Sicherer Halt	Safe standstill
SP	Safety Integrated	Safety Integrated
SIL	Safety Integrity Level	Safety Integrity Level
SLM	Smart Line Module	Smart Line Module
SLP	Safely-Limited Position	Safely-Limited Position
SLS	Safely-Limited Speed	Safely Limited Speed
SLVC	Sensorless Vector Control	Sensorless Vector Control
SM	Sensor Module	Sensor Module
SMC	Sensor Module Cabinet	Sensor Module Cabinet
SME	Sensor Module External	Sensor Module External
SN	Sicherer Software-Nocken	Safe software cam
SOS	Safe Operating Stop	Safe operating stop
SP	Service Pack	Service pack
SPC	Setpoint Channel	Setpoint channel

SPI	Serial Peripheral Interface	Serial I/O interface
SS1	Safe Stop 1	Safe Stop 1 (time-monitored, ramp-monitored)
SS2	Safe Stop 2	Safe Stop 2
SSI	Synchronous Serial Interface	Synchronous serial interface
SSM	Safe Speed Monitor	Safe feedback from speed monitor ($n < nx$)
SSR	Safe Stop Ramp	Safe brake ramp
STO	Safe Torque Off	Safely switched-off torque
STW	Steuerwort	Control word
SVA	Space-vector approximation	Space-vector approximation
T		
TB	Terminal Board	Terminal Board
TIA	Totally Integrated Automation	Totally Integrated Automation
TM	Terminal Module	Terminal Module
TN	Terre Neutre	Grounded three-phase supply system
Tn	-	Integral time
TPDO	Transmit Process Data Object	Transmit Process Data Object
TT	Terre Terre	Grounded three-phase supply system
TTL	Transistor-Transistor Logic	Transistor-Transistor-Logic
Tv	-	Derivative action time
U		
UL	Underwriters Laboratories Inc.	Underwriters Laboratories Inc.
UPS	Uninterruptible Power Supply	Uninterruptible power supply
V		
VC	Vector Control	Vector control
Vdc	-	DC link voltage
VdcN	-	Partial DC link voltage negative
VdcP	-	Partial DC link voltage positive
VDE	Verband Deutscher Elektrotechniker	Association of German Electrical Engineers
VDI	Verein Deutscher Ingenieure	Association of German Engineers
VPM	Voltage Protection Module	Voltage Protection Module
Vpp	Volt peak to peak	Volt peak to peak
VSM	Voltage Sensing Module	Voltage Sensing Module
W		
WZM	Werkzeugmaschine	Machine tool
X		
XML	Extensible Markup Language	Extensible Markup Language (standard language for Web publishing and document management)

Suggestions and/or corrections

Index

A

Anti-condensation measures, 349
Anti-freeze protection, 347
Autotransformer, 35

B

Basic Operator Panel BOP20, 258
Biocide, 348
Braking Modules, 148
Braking resistors in blocksize format, 141
Braking resistors, Chassis, 159

C

Cable Installation, 329
Cavitation, 342
Components
 Basic Operator Panel BOP20, 258
 Braking Modules, 148
 Braking resistors in blocksize format, 141
 Braking resistors, Chassis, 159
 Control Unit Adapter CUA31, 237
 Control Unit CU310 DP, 198
 Control Unit CU310 PN, 219
 CUA32 Control Unit Adapter, 246
 DRIVE-CLiQ cabinet gland, 291
 DRIVE-CLiQ coupling, 297
 dv/dt filter plus Voltage Peak Limiter, chassis format, 186
 Line filter, 38
 Line reactors, 44
 Motor reactors, 180
 Motor reactors, Blocksize, 165
 Power Modules Chassis, 124
 Power Modules PM340 blocksize, 59
 Safe Brake Relay, 282
 Screening Kit, 300
 Sensor Module Cabinet-Mounted SMC10, 262
 Sinusoidal filter, Chassis, 183
Connection methods, 115
Control cabinet design, 315

Control Unit

 LEDs during booting, 211, 230
Control Unit Adapter CUA31, 237
Control Unit CU310 DP, 198
Control Unit CU310 PN, 219
Coolant, 343, 346
Coolant connection, 115
Coolant mix, 345
Coolant temperatures, 343
Cooling circuit, 339
Cooling circuit configuration, 343
Cooling clearances, 63, 103, 335
Corrosion protection, 347
CUA32 Control Unit Adapter, 246

D

Description of the interfaces
 Control Unit Adapter CUA31, 239
 Control Unit CU310 DP, 199
 Control Unit CU310 PN, 220
 Power Modules Chassis, 125
Dew point, 349
Diagnosis
 LEDs on Double Motor Module, 130
 LEDs on Power Module, 130
 using LEDs on Sensor Module Cabinet 10, 269, 278
 using LEDs on Sensor Module Cabinet 20, 269, 278
 using LEDs on Single Motor Module, 130
Dimension drawings
 Blocksize line reactors, 45
 Chassis line filter, 40
 Chassis line reactors, 49
 Control Unit Adapter CUA31, 242
 Control Unit CU310 DP, 214
 Control Unit CU310 PN, 233
 CUA32 Control Unit Adapter, 254
 Line filter blocksize, 39
 Motor reactors Chassis, 181
 Motor reactors, blocksize, 166
 Power Modules Chassis, 130
 Power Modules PM340 blocksize, 75
 Screening Kit, 301
 Sensor Module Cabinet-Mounted SMC10, 270
 Sensor Module Cabinet-Mounted SMC20, 279
